Labour, the fund which originally supplies every nation with its annual consumption, i, 1. How the proportion between labour and consumption is regulated, ib. The different kinds of industry seldom dealt impartially with by any nation, 3. The division of labour considered, 5. This division increases the quantity of work, 9. Instances in illustration, 13. From what principle the division of labour originates, 14. The divisibility of, governed by the market, 18. Labour the real measure of the exchangeable value of commodities, 30. Different kinds of, not easily estimated by immediate comparison, 31. Is compared by the intermediate standard of money, 32. Is an invariable standard for the value of commodities, 34. Has a real and a nominal price, ib. The quantity of labour employed on different objects, the only rule for exchanging them in the rude stages of society, 48. Difference between the wages of labour and profits on stock in manufactures, 49. The whole labour of a country never exerted, 55. Is in every instance suited to the demand, 60. The effect of extraordinary calls for, 61. The deductions made from the produce of labour employed upon land, 66. Why dearer in North America than in England, 71. Is cheap in countries that are stationary, 72. The demand for, would continually decrease in a declining country, 74. The province of Bengal cited as an instance, 75. Is not badly paid for in Great Britain, 76. An increasing demand for, favourable to population, 82. That of freemen cheaper to the employers than that of slaves, 83. The money price of, how regulated, 88. Is liberally rewarded in new colonies, 95. Common labour and skilful labour distinguished, 104. The free circulation of, from one employment to another, obstructed by corporation laws, 142. The unequal prices of, in different places, probably owing to the law of settlements, 147. Can always procure subsistence on the spot where it is purchased, 153. The money price of in different countries, how governed, 199. Is set into motion by stock employed for profit, 265. The division of, depends on the accumulation of stock, 275. Machines to facilitate labour advantageous to society, 288.———Productive and unproductive distinguished, ii, 1. Various orders of men specified whose labour is unproductive, 2. Unproductive labourers all maintained by revenue, 4. The price of, how raised by the increase of the national capital, 25. Its price, though nominally raised, may continue the same, 27. Is liberally rewarded in the new colonies, 240.———Of artificers and manufacturers, never adds any value to the whole amount of the rude produce of the land, according to the French agricultural system of political economy, iii, 6. This doctrine shown to be erroneous, 15. The productive powers of labour, how to be improved, 17.

Labourers, useful and productive everywhere, proportioned to the

- Machines* for facilitating mechanical operations, how invented and improved, i, 11.——Are advantageous to every society, ii, 305.
- Madder*, the cultivation of, long confined to Holland by English tithes, iii, 185.
- Madeira wines*, how introduced into North America and Britain, ii, 172.
- Malt*, reasons for transferring the duties on brewing to, iii, 248. Distillery, how to prevent smuggling in, 245.
- Manufactures*, the great advantages resulting from a division of labour in, i, 6. Instances in illustration, 12. Why profits increase in the higher stages of, 52. Of what parts the gain consists, 55. The private advantages of secrets in, 62. Peculiar advantages of soil and situation, ib. Monopolies, 63. Corporation privileges, ib. The deductions made from labour employed on manufactures, 67. Inquiry how far they are affected by seasons of plenty and scarcity, 87. Are not so materially affected by circumstances in the country where they are carried on, as in the places where they are consumed, 88. New manufactures generally give higher wages than old ones, 118. Are more profitably carried on in towns than in the open country, 131. By what means the prices of, are reduced, while the society continues improving, 257. Instances in hardware, 258. Instances in the woollen manufacture, ib. What fixed capitals are required to carry on particular manufactures, 279.——Manufactures for distant sale, why not established in North America, ii, 52. Why preferred to foreign trade for the employment of a capital, 53. Motives to the establishment of manufactures for distant sale, 75. How shifted from one country to another, 76. Natural circumstances which contribute to the establishment of them, 77. Their effect on the government and manners of a country, 80. The independence of artisans explained, 85. May flourish amidst the ruin of a country, and begin to decay on the return of its prosperity, 110. Inquiry how far manufactures might be affected by a freedom of trade, 136. Those thrown out of one business can transfer their industry to collateral employments, 137. A spirit of combination among them to support monopolies, 139. Manufacturers prohibited by old statutes from keeping a shop, or selling their own goods by retail, 201. The use of wholesale dealers to manufacturers, 203. British restraints on manufacturers in North America, 263.——The exportation of instruments in, prohibited, ii, 257.
- Manufacturers*, an unproductive class of the people, according to the French agricultural system of political economy, iii, 5. The error of this doctrine shown, 14. How manufacturers augment the revenue of a country, 18. Why the principal support of foreign trade, 21. Require a more extensive market than rude produce of the land, 23. Were exercised by slaves in ancient Greece, 25. High prices of, in Greece and at Rome, ib. False policy to check manufactures in order to promote agriculture, 27. In Great Britain, why principally fixed in the coal counties, 227.

INDEX.

- Manure*, the supply of, in most places depends on the stock of cattle raised, i, 231.
- Maritime countries*, why the first that are civilized and improved, i, 21.
- Martial spirit*, how supported in the ancient republics of Greece and Rome, iii, 126. The want of it now supplied by standing armies, 127. The establishment of a militia little able to support it, 128.
- Mediterranean sea*, peculiarly favourable for the first attempts in navigation, i, 21.
- Mcggens*, Mr, his account of the annual importation of gold and silver into Spain and Portugal, i, 218. His relative proportion of each, 222.
- Mercantile system* explained, iii, 233.
- Mercenary troops*, origin and reason of, iii, 35. The numbers of, how limited, ib.
- Merchants*, their judgments more to be depended on respecting the interest of their particular branches of trade, than with regard to the public interest, i, 265. Their capitals altogether circulating, 278. Their dealings extended by the aid of bankers notes, 301, 308. Customs of, first established to supply the want of laws, and afterwards admitted as laws, 313. The manner of negotiating bills of exchange explained, ib. The pernicious tendency of drawing and redrawing, 314.—In what method their capitals are employed, ii, 32. Their capitals, dispersed and unfixed, 26. The principles of foreign trade examined, 45. Are the best of improvers when they turn country gentlemen, 79. Their preference among the different species of trade, how determined, 119. Are actuated by a narrow spirit of monopoly, 164. The several branches of the corn trade specified and considered, 194. The government of a company of, the worst a country can be under, 245. Of London, not good economists, 294.—An unproductive class of men, according to the present agricultural system of political economy in France, iii, 8. The quick return of mercantile capitals enables merchants to advance money to government, 269. Their capitals increased by lending money to the state, ib.
- Mercier*, de la Riviere, M. character of his natural and essential order of political societies, iii, 20.
- Metals*, why the best medium of commerce, i, 25. Origin of stamped coins, 26. Why different metals became the standard of value among different nations, 39. The durability of, the cause of the steadiness of their price, 220. On what the quantity of precious metals in every particular country depends, 338.—Restraints upon the exportation of, ii, 249.
- Metaphysics*, the science of, explained, iii, 112.
- Metayers*, description of the class of farmers so called in France, ii, 60.
- Methodists*, the teachers among, why popular preachers, iii, 131.
- Methuen*, Mr, translation of the commercial treaty concluded by him between England and Portugal, ii, 218.

INDEX.

- Mexico*, was a less civilized country than Peru, when first visited by the Spaniards, i, 213.——Present populousness of the capital city, ii, 242. Low state of arts at the first discovery of that empire, 243.
- Militia*, why allowed to be formed in cities, and its formidable nature, ii, 72.——The origin and nature of explained, iii, 37. How distinguished from the regular standing army, 38. Must always be inferior to a standing army, 40. A few campaigns of service may make a militia equal to a standing army, 41. Instances, ib.
- Milk*, a most perishable commodity, how manufactured for store, i, 238.
- Mills*, wind and water, their late introduction into England, i, 261.
- Mines*, distinguished by their fertility or barrenness, i, 173. Comparison between those of coal and those of metals, 176. The competition between extends to all parts of the world, ib. The working of, a lottery, 178. Diamond mines not always worth working, 181. Tax paid to the king of Spain from the Peruvian mines, 211. The discovery of mines not dependent on human skill or industry, 250.——In Hungary, why worked at less expense than the neighbouring ones in Turkey, iii, 25.
- Mining*, projects of, uncertain and ruinous, and unfit for legal encouragement, ii, 135.
- Mirabeau*, Marquis de, his character of the economical table, iii, 20.
- Mississippi* scheme in France, the real foundation of, ii, 323.
- Modus* for tithe, a relief to the farmer, iii, 187.
- Money*, the origin of, traced, i, 24. Is the representative of labour, 31. The value of, greatly depreciated by the discovery of the American mines, 32. How different metals became the standard money of different nations, 39. The only part of the circulating capital of a society, of which the maintenance can diminish their neat revenue, 289. The term money, in common acceptation, of ambiguous meaning, 290. Makes no part of the revenue of a society, 291. The circulating money, in society, no measure of its revenue, 293. Paper money, ib. Effect of paper on the circulation of cash, 295. Inquiry into the proportion the circulating money of any country bears to the annual produce circulated by it, 298. Paper can never exceed the value of the cash, of which it supplies the place, in any country, 303. The pernicious practice of raising money by circulation explained, 314.——The true cause of its exportation, ii, 12. Loans of, the principles of, analyzed, 22. Monied interest distinguished from the landed and trading interest, 23. Inquiry into the real causes of the reduction of interest, 26. Money and wealth synonymous terms in popular language, 93. And moveable goods compared, 94. The accumulation of, studied by the European nations, 95. The mercantile arguments for liberty to export gold and silver, 96. The validity of these arguments examined, 97. Money and goods mutually the price of each other, 100. Overtrading causes complaints of the scarcity of money, 102. Why more easy to buy goods with money, than to buy money with goods, 103. Inquiry

- into the circulating quantity of, in Great Britain, 107. Effect of the discovery of the American mines on the value of, 113. Money and wealth different things, 116. Bank money explained, 149. See *Coins, Gold, and Silver*.
- Monopolies* in trade or manufactures, the tendency of, i, 63. Are enemies to good management, 154.——Tendency of making a monopoly of colony trade, ii, 288. Countries which have colonies obliged to share their advantages with many other countries, 309. The chief engine in the mercantile system, 312. How monopolies derange the natural distribution of the stock of the society, 313. Are supported by unjust and cruel laws, 329.——Of a temporary nature, how far justifiable, 97. Perpetual monopolies injurious to the people at large, ib.
- Montauban*, the inequalities in the predial taille in that generality, how rectified, iii, 183.
- Montesquieu*, reasons given by him for the high rates of interest among all Mahometan nations, i, 99.——Examination of his idea of the cause of lowering the rate of interest of money, ii, 26.
- Morality*, two different systems of, in every civilized society, iii, 136. The principal points of distinction between them, ib. The ties of obligation in each system, 137. Why the morals of the common people are more regular in sectaries than under the established church, 138. The excesses of, how to be corrected, ib.
- Morellet*, M. his account of joint-stock companies, defective, iii, 98.

Paper money, the credit of, how established, i, 293. Its operation explained, ib. Its effect on the circulation of cash, 294. Promotes industry, 296. Operation of the several banking companies established in Scotland, 299. Can never exceed the value of the gold and silver, of which it supplies the place in any country, 302. Consequences of too much paper being issued, 303. The practice of drawing and redrawing explained, with its pernicious effects, 313. The advantages and disadvantages of paper credit stated, 326. Ill effects of notes issued for small sums, 328. Suppressing small notes renders money more plentiful, 329. The currency of, does not affect the prices of goods, 331. Account of the paper currency in North America, 332.—Expedient of the government of Pennsylvania to raise money, iii, 165. Why convenient for the domestic purposes of the North Americans, 303.
Paris enjoys a little more trade than is necessary for the consumption of its inhabitants, ii, 8.
Parish ministers, evils attending vesting the election of, in the people, iii, 153.
Parsimony is the immediate cause of the increase of capitals, ii, 9. Promotes industry, ib. Frugal men public benefactors, 10.—Is the only means by which artificers and manufacturers can add to the revenue and wealth of society, according to the French agricultural system of political economy, iii, 7.
Pasture land, under what circumstances more profitable than arable land, i, 156. Why it ought to be inclosed, 157.
Patronage, the right of, why established in Scotland, iii, 154.
Pay, military, origin and reason of, iii, 34.
Pennsylvania, account of the paper currency there, i, 333.—Good consequences of the government there having no religious establishment, iii, 135. Derive a revenue from their paper currency, 304.
People, how divided into productive and unproductive classes according to the present French system of agricultural political economy, iii, 3. The unproductive class greatly useful to the others, 8. The great body of, how rendered unwarlike, 37. The different opportunities of education in the different ranks of, 124. The inferior ranks of, the greatest consumers, 240. The luxurious expenses of these ranks ought only to be taxed, 241.
Persecution for religious opinions, the true cause of, iii, 130.

- Peru*, the discovery of the silver mines in, occasioned those in Europe to be in a great measure abandoned, i, 177. These mines yield but small profit to the proprietors, ib. Tax paid to the king of Spain from these mines, 211. The early accounts of the splendour and state of arts in this country greatly exaggerated, 213. Present state of, under the Spanish government, ib. The working of the mines there become gradually more expensive, 225.— Low state of arts there when first discovered, ii, 243. Is probably more populous now than at any former period, ib.
- Philosophy*, natural, the origin and objects of, iii, 110. Moral, the nature of, explained, 111. Logic, the origin and employment of, ib.
- Physicians*, why amply rewarded for their labour, i, 108.
- Physics*, the ancient system of, explained, iii, 112.
- Pin-making*, the extraordinary advantage of a division of labour in this art, i, 6.
- Plate* of private families, the melting it down to supply state exigencies, an insignificant resource, ii, 107. New plate is chiefly made from old, 223.
- Ploughmen*, their knowledge more extensive than the generality of mechanics, 133.
- Pneumatics* the science of, explained, iii, 113.
- Poivre*, M. his account of the agriculture of Cochin-China, i, 164.
- Poland*, a country still kept in poverty by the feudal system of its government, i, 252.
- Political economy*, the two distinct objects, and two different systems of, ii, 93.—The present agricultural system of, adopted by French philosophers, described, iii, 1. Classes of the people who contribute to the annual produce of the land, 3. How proprietors contribute, ib. How cultivators contribute, ib. Artificers and manufacturers unproductive, 5. The unproductive classes maintained by the others, 8. Bad tendency of restrictions and prohibitions in trade, 12. How this system is delineated by M. Quesnai, 13. The bad effects of an injudicious political economy, how corrected, 14. The capital error in this system pointed out, ib.
- Poll-taxes*, origin of, under the feudal government, ii, 68.—Why esteemed badges of slavery, iii, 207. The nature of, considered, 220.
- Poor*, history of the laws made for the provision of, in England, i, 143.
- Pope of Rome*, the great power formerly assumed by, iii, 143. His power how reduced, 146. Rapid progress of the reformation, 149.
- Population*, riches and extreme poverty equally unfavourable to, i, 81. Is limited by the means of subsistence, 82, 171.
- Porter*, the proportion of malt used in the brewing of, iii, 243.
- Portugal*, the cultivation of the country not advanced by its commerce, ii, 91. The value of gold and silver there depreciated by prohibiting their exportation, 181. Translation of the commercial treaty concluded in 1703 with England, 218. A large share of the Portugal gold sent annually to England, 219. Motives that led to the discovery of a passage to the East round the Cape of

INDEX.

mines, 177. Mines of precious stones frequently yield no rent, 181. How paid in ancient times, 190. Is raised, either directly or indirectly, by every improvement in the circumstances of society, 262. Gross and neat rent distinguished, 286.——— How raised and paid under feudal governments, ii, 5. Present average proportion of, compared with the produce of the land, 6.———Of houses distinguished into two parts, iii, 188. Difference between rent of houses and rent of land, 191. Rent of a house the best estimate of a tenant's circumstances, ib.

Retainers, under the feudal system of government described, ii, 80. How the connexion between them and their lords was broken, 84.

Revenue, the original source of, pointed out, i, 53. Of a country, of what it consists, 287. The neat revenue of a society diminished by supporting a circulating stock of money, 288. Money no part of revenue, 289. Is not to be computed in money, but in what money will purchase, 290.———How produced, and how appropriated, in the first instance, ii, 3. Produce of land, ib. Produce of manufactures, ib. Must always replace capital, 4. The proportion between revenue and capital regulates the proportion between idleness and industry, 9. Both the savings and the spendings of, annually consumed, ib. Of every society, equal to the exchangeable value of the whole produce of its industry, 121. Of the customs, increase by drawbacks, 173.———Why government ought not to take the management of turnpikes, to derive a revenue from them, iii, 67. Public works of a local nature always better maintained by provincial revenues than by the general revenue of the state, 71. The abuses in provincial revenues trifling, when compared with those in the revenue of a great empire, 72. The greater the revenue of the church, the smaller must be that of the state, 157. The revenue of the state ought to be raised proportionably from the whole society, 160. Local expenses ought to be defrayed by a local revenue, 161. Inquiry into the sources of public revenue, 162. Of the republic of Hamburgh, ib. 165. Whether the government of Britain could undertake the management of the bank, to derive a revenue from it, 163. The post-office, a mercantile project, well calculated for being managed by government, ib. Princes not well qualified to improve their fortunes by trade, 164. The English East India Company good traders before they became sovereigns, but each character now spoils the other, ib. Expedient of the government of Pennsylvania to raise money, 165. Rent of land the most permanent fund, 166. Feudal revenues, 167. Great Britain, 168. Revenue from land proportioned not to the rent but to the produce, 169. Reasons for selling the crown lands, 170. An improved land-tax suggested, 176. The nature and effect of tithes explained, 184. Why a revenue cannot be raised in kind, 186. When raised in money, how affected by different modes of valuation, 187. A proportionable tax on houses the best source of revenue, 191. Remedies for the diminution of, according to their causes, 257. Bad effects of farm-

- Rice*, a very productive article of cultivation, i, 167. Requires a soil unfit for raising any other kind of food, *ib.* Rice countries more populous than corn countries, 215.
- Riches*, the chief enjoyment of, consists in the parade of, i, 180.
- Risk*, instances of the inattention mankind pay to it, i, 112.
- Roads*, good, the public advantages of, i, 154. ——— How to be made and maintained, *iii*, 63. The maintenance of, why improper to be trusted to private interest, 66. General state of, in France, 69. In China, 70.
- Romans*, why copper became the standard of value among them, i, 39. The extravagant prices paid by them for certain luxuries for the table accounted for, 229. The value of silver higher among them than at the present time, *ib.* ——— The republic of, founded on a division of land among the citizens, *ii*, 230. The Agrarian law only executed upon one or two occasions, *ib.* How the citizens who had no land subsisted, 231. Distinction between the Roman and Greek colonies, 232. The improvement of the former slower than that of the latter, 241. Origin of the social war, 303. The republic ruined by extending the privilege of Roman citizens to the greater part of the inhabitants of Italy, 306. ——— When contributions were first raised to maintain those who went to the wars, *iii*, 33. Soldiers not a distinct profession there, 36. Improvement of the Roman armies by discipline, 42. How that discipline was lost, 44. The fall of the western empire, how effected, *ib.* Remarks on the education of the ancient Romans, 116. Their morals superior to those of the Greeks, *ib.* State of law, and forms of justice, 119. The martial spirit of the people, how supported, 126. Great reductions of the coin practised by, at particular exigencies, 320.
- Rome*, modern, how the zeal of the inferior clergy of, is kept alive, *iii*, 131. The clergy of, one great spiritual army dispersed in different quarters over Europe, 143. Their power during the feudal monkish ages similar to that of the temporal barons, 144. Their power, how reduced, 147.
- Rouen*, why a town of great trade, *ii*, 7.
- Ruddiman*, Mr, remarks on his account of the ancient price of wheat in Scotland, i, 193.
- Russia*, was civilized under Peter I. by a standing army, *iii*, 61.

S

- Sailors*, why no sensible inconvenience felt by the great numbers disbanded at the close of a war, *ii*, 137.
- Salt*, account of foreign salt imported into Scotland, and of Scotch salt delivered duty free for the fishery, *ii. append.* ——— Is an object of heavy taxation everywhere, *iii*, 226. The collection of the duty on, expensive, 252.
- Sardinia*, the land-tax how assessed there, *iii*, 182.
- Saxon lords*, their authority and jurisdiction as great before the conquest as those of the Normans were afterwards, *ii*, 82.
- Schools*, parochial, observations on, *iii*, 126.

INDEX.

- Science* is the great antidote to the poison of enthusiasm and superstition, iii, 138.
- Scipio*, his Spanish militia rendered superior to the Carthaginian militia by discipline and service, iii, 43.
- Scotland*, compared with England as to the prices of labour and provisions, i, 77. Remarks on the population of the Highlands, 81. The market rate of interest higher than the legal rate, 92. The situation of cottagers there described, 121. Apprenticeships and corporations, 126. The common people of, why neither so strong nor so handsome as the same class in England, 168. Cause of the frequent emigrations from, 199. Progress of agriculture there before the union with England, 233. Present obstructions to better husbandry, ib. The price of wool reduced by the union, 247. Operation of the several banking companies established there, 298. Amount of the circulating money there before the union, 299. Amount of the present circulating cash, 300. Course of dealings in the Scotch bank, ib. Difficulties, occasioned by these banks issuing too much paper, 305. Necessary caution for some time observed by the banks in giving credit to their customers, with the good effects of it, 308. The scheme of drawing and redrawing adopted by traders, 312. Its pernicious tendency explained, 314. History of the Ayr bank, 318. Mr Law's scheme to improve the country, 323. The prices of goods in, not altered by paper currency, 330. Effect of the optional clauses in their notes, 331.—Cause of the speedy establishment of the reformation there, iii, 151. The disorders attending popular elections of the clergy there, occasioned the right of patronage to be established, 154. Amount of the whole revenue of the clergy, 158.
- Sea service* and military service by land compared, i, 112.
- Sects in religion*, the more numerous, the better for society, iii, 135. Why they generally profess the austere system of morality, 130.
- Self-love* the governing principle in the intercourse of human society, i, 15.
- Servants*, menial, distinguished from hired workmen, ii, 1. The various orders of men who rank in the former class in reference to their labours, 2.—Their labour unproductive, iii, 15.
- Settlements* of the poor, brief review of the English laws relating to, i, 143. The removals of the poor a violation of natural liberty, 147.—The law of, ought to be repealed, ii, 138.
- Sheep*, frequently killed in Spain for the sake of the fleece and the tallow, i, 242.—Severe laws against the exportation of them and their wool, ii, 329.
- Shepherds*, war how supported by a nation of, iii, 30. Inequality of fortune among, the source of great authority, 52. Birth and family highly honoured in nations of shepherds, 53. Inequality of fortune first began to take place in the age of shepherds, 54. And introduced civil government, ib.
- Shetland*, how rents are estimated and paid there, i, 151.
- Silk manufacture*, how transferred from Lucca to Venice, ii, 76.
- Silver*, the first standard coinage of the northern subverters of the

INDEX.

Roman empire, i, 40. Its proportional value to gold regulated by law, 41. Is the measure of the value of gold, 42. Mint price of silver in England, 43. Inquiry into the difference between the mint and market price of bullion, 44. How to preserve the silver coin from being melted down for profit, 45. The mines of, in Europe, why generally abandoned, 177. Evidences of the small profit they yield to the proprietors in Peru, ib. Qualities for which this metal is valued, 180. The most abundant mines of, would add little to the wealth of the world, 182. But the increase in the quantity of, would depreciate its own value, 184. Circumstances that might counteract this effect, 185. Historical view of the variations in the value of, during the four last centuries, ib. Remarks on its rise in value compared with corn, 189. Circumstances that might have misled writers in reviewing the value of silver, 190. Corn the best standard for judging of the real value of silver, 196. The price of, how affected by the increase of quantity, 197. The value of, sunk by the discovery of the American mines, 201. When the reduction of its value from this cause appears to have been completed, 202. Tax paid from the Peruvian mines to the king of Spain, 211. The value of silver kept up by an extension of the market, ib. Is the most profitable commodity that can be sent to China, 217. The value of, how proportioned to that of gold before and after the discovery of the American mines, 221. The quantity commonly in the market in proportion to that of gold probably greater than their relative values indicate, 222. The value of, probably rising, and why, 226. The opinion of a depreciation of its value not well founded, 250.—The real value of, degraded by the bounty on the exportation of corn, ii, 178.

Sinking fund in the British finances explained, iii, 275. Is inadequate to the discharge of former debts, and almost wholly applied to other purposes, 280. Motives to the misapplication of it, 281.

Slaves, the labour of, dearer to the masters than that of freemen, i, 83.—Under feudal lords, circumstances of their situation, ii, 58. Countries where this order of men still remains, 59. Why the service of slaves is preferred to that of freemen, 60. Their labour why unprofitable, ib. Causes of the abolishing of slavery throughout the greater part of Europe, 61. Receive more protection from the magistrate in an arbitrary government than in one that is free, 264.—Why employed in manufactures by the ancient Grecians, iii, 25. Why no improvements are to be expected from them, ib.

Smuggling, a tempting, but generally a ruinous employment, i, 114. —Encouraged by high duties, iii, 234. Remedies against, 236. The crime of, morally considered, 254.

Society, human, the first principles of, i, 14.

Soldiers, remarks on their motives for engaging in the military line, i, 112. Comparison between the land and sea service, ib.—Why no sensible inconvenience felt by the disbanding of great numbers after a war is over, ii, 137.—Reason of their first serving for pay, iii, 34. How they became a distinct class of the

INDEX.

- people, 38. How distinguished from the militia, *ib.* Alteration in their exercise produced by the invention of fire-arms, 39.
- South-sea company*, amazing capital once enjoyed by, *iii*, 83. Mercantile and stock-jobbing projects of, 86. Assiento contract, 87. Whale fishery, *ib.* The capital of turned into annuity stock, *ib.* 273.
- Sovereign and trader*, inconsistent characters, *iii*, 164.
- Sovereign*, three duties only necessary for him to attend to for supporting a system of natural liberty, *iii*, 28. How he is to protect the society from external violence, 30, 47. And the members of it from the injustice and oppression of each other, 49. And to maintain public works and institutions, 62.
- Spain*, one of the poorest countries in Europe, notwithstanding its rich mines, *i*, 252.—Its commerce has produced no considerable manufactures for distant sale, and the greater part of the country remains uncultivated, *ii*, 91. Spanish mode of estimating their American discoveries, 94. The value of gold and silver there depreciated by laying a tax on the exportation of them, 181. Agriculture and manufactures there discouraged by the redundancy of gold and silver, 182. Natural consequences that would result from taking away this tax, 183. The real and pretended motives of the court of Castile for taking possession of the countries discovered by Columbus, 236. The tax on gold and silver, how reduced, *ib.* Gold the object of all the enterprizes to the new world, *ib.* The colonies of, less populous than those of any other European nation, 242. Asserted an exclusive claim to all America, until the miscarriage of their invincible armada, 244. Policy of the trade with the colonies, 252. The American establishments of, effected by private adventurers, who received little beyond permission from the government, 267. Lost its manufactures by acquiring rich and fertile colonies, 290.—The alcavala tax there explained, *iii*, 255. The ruin of the Spanish manufactures attributed to it, 256.
- Speculation*, a distinct employment in improved society, *i*, 13. Speculative merchants described, 118.
- Stage*, public performers on, paid for the contempt attending their profession, *i*, 110.—The political use of dramatic representations, *iii*, 139.
- Stamp duties* in England and Holland, remarks on, *iii*, 211, 215.
- Steel-bow* tenants in Scotland, what, *ii*, 62.
- Stock*, the profits raised on, in manufactures, explained, *i*, 49. In trade, an increase of, raises wages, and diminishes profit, 90. Must be larger in a great town than in a country village, 92. Natural consequences of a deficiency of stock in new colonies, 94. The profits on, little affected by the easiness or difficulty of learning a trade, 105. But by the risk or disagreeableness of the business, 115. Stock employed for profit sets into motion the greater part of useful labour, 265. No accumulation of, necessary in the rude state of society, 275. The accumulation of, necessary to the division of labour, 276. Stock distinguished into two parts, 278. The general stock of a country or society explained, 280.

INDEX.

- Houses, *ib.* Improved land, 281. Personal abilities, 282. Money and provisions, *ib.* Raw materials and manufactured goods, *ib.* Stock of individuals how employed, 285. Is frequently buried or concealed in arbitrary countries, *ib.*———The profits on, decrease in proportion as the quantity increases, ii, 7. On what principles stock is lent and borrowed at interest, 22. That of every society divided among different employments, in the proportion most agreeable to the public interest, by the private views of individuals, 312. The natural distribution of, deranged by monopolizing systems, 313. Every derangement of, injurious to the society, *ib.*———Mercantile, is barren and unproductive, according to the French agricultural system of political economy, iii, 6. How far the revenue from, is an object of taxation, 196. A tax on, intended under the land-tax, 199.
- Stockings*, why cheaply manufactured in Scotland, i, 122. When first introduced into England, 260.
- Stone quarries*, their value depends on situation, i, 171, 184.
- Stones*, precious, of no use but for ornament, and how the price of, is regulated, i, 181. The most abundant mines, would add little to the wealth of the world, 182.
- Subordination*, how introduced into society, iii, 50. Personal qualifications, *ib.* Age and fortune, 51. Birth, 52. Birth and fortune two great sources of personal distinction, 53.
- Subsidy*, old, in the English customs, the drawbacks upon, ii, 130. ———Origin and import of the term, iii, 232.
- Sugar*, a very profitable article of cultivation, i, 164; ii, 59.——Drawbacks on the importation of from England, ii, 170. Might be cultivated by the drill-plough, instead of all hand-labour by slaves, 263.———A proper subject for taxation, as an article sold at monopoly price, iii, 248.
- Sumptuary laws* superfluous restraints on the common people, ii, 18.
- Surinam*, present state of the Dutch colony there, ii, 245.
- Switzerland*, establishment of the reformation in Berne and Zurich, iii, 150. The clergy there zealous and industrious, 159. Taxes how paid there, 200, 211.

T

- Taille*, in France, the nature of that tax, and its operation, explained, ii, 64; iii, 203.
- Talents*, natural, not so various in different men as is supposed, i, 16.
- Tartars*, their manner of conducting war, iii, 31. Their invasions dreadful, *ib.*
- Tavernier*, his account of the diamond mines of Golconda and Vi-siapour, i, 181.
- Taxes*, the origin of, under the feudal government, ii, 67.———The sources from whence they must arise, iii, 171. Unequal taxes, 172. Ought to be clear and certain, *ib.* Ought to be levied at the times most convenient for payment, *ib.* Ought to take as little as possible out of the pockets of the people more than is brought into the public treasury, *ib.* How they may be made more burdensome to the people than beneficial to the sovereign, 173. The

INDEX.

- land-tax of Great Britain, 174. Land-tax of Venice, 177. Improvements suggested for a land-tax, *ib.* Mode of assessing the land-tax in Prussia, 181. Tithes a very unequal tax, and a discouragement to improvement, 184. Operation of tax on house rent, payable by the tenant, 189. A proportionable tax on houses the best source of revenue, 191. How far the revenue from stock is a proper object of taxation, 196. Whether interest of money is proper for taxation, 197. How taxes are paid at Hamburgh, 200. In Switzerland, *ib.* Taxes upon particular employments, 202. Poll-taxes, 207. Taxes badges of liberty, 208. Taxes upon the transfer of property, 209. Stamp duties, 211. On whom the several kinds of taxes principally fall, 212. Taxes upon the wages of labour, 215. Capitations, 220. Taxes upon consumable commodities, 222. Upon necessaries, 223. Upon luxuries, *ib.* Principal necessities taxed, 226. Absurdities in taxation, 228. Different parts of Europe very highly taxed, *ib.* Two different methods of taxing consumable commodities, *ib.* Sir Matthew Decker's scheme of taxation considered, 229. Excise and customs, 231. Taxation sometimes not an instrument of revenue, but of monopoly, 234. Improvements of the customs suggested, 237. Taxes paid in the price of a commodity little adverted to, 251. On luxuries, the good and bad properties of, *ib.* Bad effects of farming them out, 260. How the finances of France might be reformed, 261. French and English taxations compared, 262. New taxes generate discontent, 381. How far the British system of taxation might be applicable to all the different provinces of the empire, 295. Such a plan might speedily discharge the national debt, 300.
- Tea*, great importation and consumption of that drug in Britain, *i*, 215.
- Teachers in Universities*, tendency of endowments to diminish their application, *iii*, 102. The jurisdictions to which they are subject little calculated to quicken their diligence, 103. Are frequently obliged to gain protection by servility, 104. Defects in their establishments, 105. Teachers among the ancient Greeks and Romans superior to those of modern times, 120. Circumstances which draw good ones to, or drain them from, the universities, 155. Their employment naturally renders them eminent in letters, 157.
- Tenures*, feudal, general observations on, *ii*, 51. Described, 55.
- Theology*, monkish, the complexion of, *iii*, 113.
- Tin*, average rent of the mines of, in Cornwall, *i*, 177. Yield a greater profit to the proprietors than the silver mines of Peru, 178. Regulations under which tin mines are worked, 179.
- Tobacco*, the culture of, why restrained in Europe, *i*, 165. Not so profitable an article of cultivation in the West Indies as sugar, *ib.* ——— The amount and course of the British trade with, explained, *ii*, 46. The whole duty upon, drawn back on exportation, 176. Consequences of the exclusive trade Britain enjoys with Maryland and Virginia in this article, 273.
- Tolls*, for passage over roads, bridges, and navigable canals, the equity of, shown, *iii*, 64. Upon carriages of luxury, ought to be

INDEX.

- higher than upon carriages of utility, 65. The management of turnpikes often an object of just complaint, 66. Why government ought not to have the management of turnpikes, 67, 249.
- Tonnage and poundage*, origin of those duties, iii, 232.
- Tontine* in the French finances, what, with the derivation of the name, iii, 277.
- Toulouse*, salary paid to counsellor or judge in the parliament of, iii, 59.
- Towns*, the places where industry is most profitably exerted, i, 131. The spirit of combination prevalent among manufacturers, ib. ———According to what circumstances the general character of the inhabitants as to industry is formed, ii, 6. The reciprocal nature of the trade between them and the country explained, 49. Subsist on the surplus produce of the country, 50. How first formed, 51. Are continual fairs, 52. The original poverty and servile state of the inhabitants of, 67. Their early exemptions and privileges, how obtained, 68. The inhabitants of, obtained liberty much earlier than the occupiers of land in the country, ib. Origin of free burghs, 69. Origin of corporations, 70. Why allowed to form militia, 72. How the increase and riches of commercial towns contributed to the improvement of the countries to which they belonged, 79.
- Trade*, double interest deemed a reasonable mercantile profit in, i, 100. ———Four general classes of, equally necessary to, and dependent on each other, ii, 31. Wholesale, three different sorts of, 40. The different returns of home and foreign trade 41. The principles of foreign trade examined, 45. The trade between town and country explained, 49. Original poverty and servile state of the inhabitants of towns under feudal government, 67. Exemptions and privileges granted to them, 68. Extension of commerce by rude nations selling their own raw produce for the manufactures, of more civilized countries, 75. Its salutary effects on the government and manners of a country, 80. Subverted the feudal authority, 84. The independence of tradesmen and artisans explained, 85. The capitals acquired by, very precarious, until some part has been realized by the cultivation and improvement of land, 91. Over-trading, the cause of complaints of the scarcity of money, 102. The importation of gold and silver not the principal benefit derived from foreign trade, 112. Effect produced in trade and manufactures by the discovery of America, 114. And by the discovery of a passage to the East Indies round the Cape of Good Hope, 115. Error of commercial writers in estimating national wealth by gold and silver, 116. Inquiry into the cause and effect of restraints upon trade, 117. Individuals, by pursuing their own interest, unknowingly promote that of the public, 119. Legal regulations of trade unsafe, 122. Retaliatory regulations between nations, 134. Measures for laying trade open ought to be carried into execution slowly, 139. Policy of the restraints on trade between France and Britain considered, 141. No certain criterion to determine on which side the balance of trade between two countries turns, 142. Most of the regulations of, founded on a mistaken doctrine of the balance of trade, 159. Is generally founded

INDEX.

on narrow principles of policy, 163. Drawbacks of duties, 169. The dealer who employs his whole stock on one single branch of business has an advantage of the same kind with the workman who employs his whole labour on a single operation, 202. Consequences of drawing it from a number of small channels into one great channel, 284. Colony trade, and the monopoly of that trade distinguished, 287. The interest of the consumer constantly sacrificed to that of the producer, ii, 343.——Advantages attending a perfect freedom of, to landed nations, according to the present agricultural system of political economy in France, iii, 10. Origin of foreign trade, 11. Consequences of high duties and prohibitions in landed nations, 12. How trade augments the revenue of a country, 17. Nature of the trading intercourse between the inhabitants of towns and those of the country, 27. *Trades*, cause and effect of the separation of, i, 7. Origin of, 16. *Transit duties*, explained, iii, 250. *Travelling* for education, summary view of the effects of, iii, 115. *Treasures*, why formerly accumulated by princes, ii, 111. *Treasure-trove*, the term explained, i, 285.——Why an important branch of revenue under the ancient feudal governments, iii, 266. *Turkey company*, short historical view of, iii, 76. *Turnpikes*. See *Tolls*. *Tithes*, why an unequal tax, iii, 184. The levying of, a great discouragement to improvements, 185. The fixing a modus for, a relief to the farmer, 187.

V

Value, the term defined, i, 28. *Vedius Pollio*, his cruelty to his slaves checked by the Roman emperor Augustus, which could not have been done under the republican form of government, ii, 264. *Venice*, origin of the silk manufacture in that city, ii, 76. Traded in East India goods before the sea track round the Cape of Good Hope was discovered, 232.——Nature of the land-tax in that republic, iii, 177. *Venison*, the price of, in Britain, does not compensate the expense of a deer park, i, 236. *Vicesima hereditatum* among the ancient Romans, the nature of, explained, iii, 209. *Villages*, how first formed, ii, 52. *Villanage*, probable cause of the wearing out of that tenure in Europe, 261. *Vineyard*, the most profitable part of agriculture, both among the ancients and moderns, i, 161. Great advantages derived from peculiarities of soil in, 163. *Universities*, the emoluments of the teachers in, how far calculated to promote their diligence, iii, 108. The professors at Oxford have mostly given up teaching, 104. Those in France subject to incompetent jurisdictions, ib. The privileges of graduates improperly obtained, 105. Abuse of lectureships, ib. The discipline of, seldom calculated for the benefit of the students,

INDEX.

106. Are in England more corrupted than the public schools, 107. Original foundation of, 108. How Latin became an essential article in academical education, *ib.* How the study of the Greek language was introduced, 109. The three great branches of the Greek philosophy, 110. Are now divided into five branches, 112. The monkish course of education in, 113. Have not been very ready to adopt improvements, 114. Are not well calculated to prepare men for the world, 115. How filled with good professors, or drained of them, 155. Where the worst and best professors are generally to be met with, 156. —See *Colleges and Teachers.*

W

Wages of labour, how settled between masters and workmen, *i.* 67. The workmen generally obliged to comply with the terms of their employers, 68. The opposition of workmen outrageous, and seldom successful, 69. Circumstances which operate to raise wages, 70. The extent of wages limited by the funds from which they arise, 71. Why higher in North America than in England, 72. Are low in countries that are stationary, 73. Not oppressively low in Great Britain, 75. A distinction made here between the wages in summer and in winter, *ib.* If sufficient in dear years, they must be ample in seasons of plenty, 76. Different rates of, in different places, *ib.* Liberal wages encourage industry and propagation, 84. An advance of, necessarily raises the price of many commodities, 89. An average of, not easily ascertained, 90. The operation of high wages and high profits compared, 100. Causes of the variations of, in different employments, 103. Are generally higher in new, than in old trades, 118, 186. Legal regulations of, destroy industry and ingenuity, 149. —Natural effect of a direct tax upon, *iii.* 217.

Walpole, Sir Robert, his excise scheme defended, *iii.* 239.

Wants of mankind, how supplied through the operation of labour, *i.* 23. How extended, in proportion to their supply, 171. The far greater part of them supplied from the produce of other men's labour, 275.

Wars, foreign, the funds for the maintenance of, in the present century, have little dependence on the quantity of gold and silver in a nation, *ii.* 107. —How supported by a nation of hunters, *iii.* 30. By a nation of shepherds, *ib.* By a nation of husbandmen, 32. Men of military age, what proportion they bear to the whole society, 33. Feudal wars, how supported, 34. Causes which, in the advanced state of society, rendered it impossible for those who took the field, to maintain themselves, *ib.* How the art of war became a distinct profession, 36. Distinction between the militia and regular forces, 38. Alteration in the art of war produced by the invention of fire-arms, 39, 48. Importance of discipline, 39. Macedonian army, 41. Carthaginian army, 42. Roman army, *ib.* Feudal armies, 45. A well regulated standing army, the only defence of a civilized country, and the only means for speedily civilizing a barbarous

INDEX.

- country, 46. The want of parsimony during peace, imposes on states the necessity of contracting debts to carry on war, 268, 280. Why war is agreeable to those who live secure from the immediate calamities of it, *ib.* Advantages of raising the supplies for, within the year, 287.
- Watch* movements, great reduction in the prices of, owing to mechanical improvements, i, 258.
- Wealth* and money, synonymous terms, in popular language, ii, 93, 116. Spanish and Tartarian estimate of, compared, 117.—The great authority conferred by the possession of, iii, 51.
- Weavers*, the profits of, why necessarily greater than those of spinners, i, 52.
- West Indies*, discovered by Columbus, ii, 233. How they obtained this name, 234. The original native productions of, *ib.* The thirst of gold the object of all the Spanish enterprises there, 236. And of those of every other European nation, 238. The remoteness of, greatly in favour of the European colonies there, 242. The sugar colonies of France better governed than those of Britain, 262.
- Wheat.* See *Corn.*
- Window-tax* in Britain, how rated, iii, 195. Tends to reduce house rent, 196.
- Windsor* market, chronological table of the prices of corn at, i, 271.
- Wine*, the cheapness of, would be a cause of sobriety, ii, 162. The carrying trade in, encouraged by English statutes, 171.
- Wood*, the price of, rises in proportion as a country is cultivated, i, 174. The growth of young trees prevented by cattle, *ib.* When the planting of trees becomes a profitable employment, *ib.*
- Wool*, the produce of rude countries, commonly carried to a distant market, i, 241. The price of, in England, has fallen considerably since the time of Edward III, 243. Causes of this diminution in price, 244. The price of, considerably reduced in Scotland, by the union with England, 247.—Severity of the laws against the exportation of, ii, 329. Restraints upon the inland commerce of, 331. Restraints upon the coasting trade of, 332. Pleas on which these restraints are founded, *ib.* The price of wool depressed by these regulations, 333. The exportation of, ought to be allowed, subject to a duty, 335.
- Woollen* cloth, the present prices of, compared with those at the close of the fifteenth century, i, 259. Three mechanical improvements introduced in the manufacture of, 260.
