

were too rude and ignorant to value intellectual superiority. The inventor of

Invention of Gunpowder and Printing. gunpowder appears to have been contemporary with Petrarch and Boccaccio. The inventor of printing was certainly contemporary with Nicholas the Fifth, with Cosmo de' Medici, and with a crowd of distinguished scholars. But the human mind still retained that fatal bent which it had received two thousand years earlier. George of Trebison and Marsilio Ficino would not easily have been brought to believe that the inventor of the printing-press had done more for mankind than themselves, or than those ancient writers of whom they were the enthusiastic votaries.

At length the time arrived when the barren philosophy which had, during so many ages, employed the faculties of the ablest of men, was destined to fall. It had worn many shapes. It had mingled itself with many creeds. It had survived revolutions in which empires, religions, languages, races, had perished. Driven from its ancient haunts, it had taken sanctuary in that Church which it had persecuted, and had, like the daring fiend of the poet, placed its seat

“next the seat of God,
And with its darkness dared affront his light.”

Words, and more words, and nothing but words, had been all the fruit of all the toil of all the most renowned sages of sixty generations. But the days of this sterile exuberance were numbered.

Many causes predisposed the public mind to a change. The study of a great variety of ancient writers, though it did not give a right direction to philosophical search, did much towards destroying that blind reverence for authority which had prevailed when Aristotle ruled alone. The rise of the Florentine sect of Platonists, a sect to which belonged some of the finest minds of the fifteenth century, was not an unimportant event. The mere substitution of the Academic for the Peripatetic philosophy would indeed have done little good. But anything was better than the old habit of unreasoning servility. It was something to have a choice of tyrants. “A spark of freedom,” as Gibbon has justly remarked, “was produced by this collision of adverse servitude.”

Other causes might be mentioned. But

it is chiefly to the great reformation of religion that we owe the great reformation of philosophy. The alliance between the Schools and the Vatican had for ages been so close that those who threw off the dominion of the Vatican could not continue to recognise the authority of the Schools. Most of the great reformers treated the Peripatetic philosophy with contempt, and spoke of Aristotle as if Aristotle had been answerable for all the dogmas of Thomas Aquinas. “Nullo apud Lutheranos philosophiam esse in pretio,”* was a reproach which the defenders of the Church of Rome loudly repeated, and which many of the Protestant leaders considered as a compliment. Scarcely any text was more frequently cited by the reformers than that in which St. Paul cautions the Colossians not to let any man spoil them by philosophy. Luther, almost at the outset of his career, went so far as to declare that no man could be at once a proficient in the school of Aristotle and in that of Christ. Zwingle, Bucer, Peter Martyr, Calvin, held similar language. In some of the Scotch universities, the Aristotelian system was discarded for that of Ramus. Thus, before the birth of Bacon, the empire of the scholastic philosophy had been shaken to its foundations. There was in the intellectual world an anarchy resembling that which in the political world often follows the overthrow of an old and deeply rooted government. Antiquity, prescription, the sound of great names, had ceased to awe mankind. The dynasty which had reigned for ages was at an end; and the vacant throne was left to be struggled for by pretenders.

The first effect of this great revolution was, as Bacon most justly observed,† to give for a time an undue importance to the mere graces of style. The new breed of scholars, the Aschams and Buchanans, nourished with the finest compositions of the Augustan age, regarded with loathing the dry, crabbed and barbarous diction of respondents and opponents. They were far less studious about the matter of their writing than about the manner. They succeeded in reforming Latinity; but they never even aspired to effect a reform in philosophy.

* We quote on the authority of Bayle from Melchior Cano, a scholastic divine of great reputation.

† *De Augustinis*, Lib. 1.

The Schools
and the

Graces of
style.

At this time Bacon appeared. It is altogether incorrect to say, as has often been said, that he was the first man who rose up against the Aristotelian philosophy when in the height of its power. The authority of that philosophy had, as we have shown, received a fatal blow long before he was born. Several speculators, among whom Ramus is the best known, had recently attempted to form new sects. Bacon's own expressions about the state of public opinion in the time of Luther are clear and strong: "Accedebat," says he, "odium et contemptus, illis ipsis temporibus ortus erga Scholasticos." And again, "Scholasticorum doctrina despectui prorsus haberi cœpit tanquam aspera et barbara."* The part which Bacon played in this great change was the part, not of Robespierre, but of Bonaparte. The ancient order of things had been subverted. Some bigots still cherished with devoted loyalty the remembrance of the fallen monarchy, and exerted themselves to effect a restoration. But the majority had no such feeling. Freed, yet not knowing how to use their freedom, they pursued no determinate course, and had found no leader capable of conducting them.

That leader at length arose. The philosophy which he taught was essentially new. It differed from that of the celebrated ancient teachers, not merely in method, but also in object. Its object was the good of mankind, in the sense in which the mass of mankind always have understood and always will understand the word good. "Meditor," says Bacon, "instauracionem philosophiæ ejusmodi quæ nihil inanis aut abstracti habeat, quæque vitæ humanæ conditiones in melius provehat." †

The difference between the philosophy of Bacon and that of his predecessors cannot, we think, be better illustrated than by comparing his views on some important subjects with those of Plato. We select Plato, because we conceive that he did more than any other person towards giving to the minds of speculative men that bent which they retained till they received from Bacon a new impulse in a diametrically opposite direction.

It is curious to observe how differently these great men estimated the value of

* Both these passages are in the first book of the *De Augmentis*.

† *Redargutio Philosophiarum*.

every kind of knowledge. Take Arithmetic for example. Plato, after speaking slightly of the convenience of being able to reckon and compute in the ordinary transactions of life, passes to what he considers as a far more important advantage. The study of the properties of numbers, he tells us, habituates the mind to the contemplation of pure truth, and raises us above the material universe. He would have his disciples apply themselves to this study, not that they may be able to buy or sell, not that they may qualify themselves to be shopkeepers or travelling merchants, but that they may learn to withdraw their minds from the ever-shifting spectacle of this visible and tangible world, and to fix them on the immutable essences of things.*

Plato on arithmetic.

Bacon, on the other hand, valued this branch of knowledge, only on account of its uses with reference to that visible and tangible world which Plato so much despised. He speaks with scorn of the mystical arithmetic of the later Platonists, and laments the propensity of mankind to employ, on mere matters of curiosity, powers the whole exertion of which is required for purposes of solid advantage. He advises arithmeticians to leave these trifles, and to employ themselves in framing convenient expressions, which may be of use in physical researches. †

Bacon's valuation.

The same reasons which led Plato to recommend the study of arithmetic led him to recommend also the study of mathematics. The vulgar crowd of geometers, he says, will not understand him. They have practice always in view. They do not know that the real use of the science is to lead men to the knowledge of abstract, essential, eternal truth. ‡ Indeed, if we are to believe Plutarch, Plato carried this feeling so far that he considered geometry as degraded by being applied to any purpose of vulgar utility. Archytas, it seems, had framed machines of extraordinary power on mathematical principles. § Plato remon-

Intellectual exercises degraded.

strated with his friend, and declared that this was to degrade a noble intellectual exercise into a low craft, fit only for carpenters and wheelwrights. The office of geometry, he said, was to discipline the mind, not to minister to the base wants of the body. His interference was successful; and from that time, according to Plutarch, the science of mechanics was considered as unworthy of the attention of a philosopher.

Archimedes in a later age imitated and surpassed Archytas. But even Archi-

medes was not free from the prevailing notion that geometry was degraded by being employed to produce anything useful. It was with difficulty that he was induced to stoop from speculation to practice. He was half ashamed of those inventions which were the wonder of hostile nations, and always spoke of them slightingly as mere amusements, as trifles in which a mathematician might be suffered to relax his mind after intense application to the higher parts of his science.

The opinion of Bacon on this subject was diametrically opposed to that of the ancient philosophers. He

An opposite opinion. valued geometry chiefly, if not solely, on account of those uses, which to Plato appeared so base. And it is remarkable that the longer Bacon lived the stronger this feeling became. When in 1605 he wrote the two books on the Advancement of Learning, he dwelt on the advantages which mankind derived from mixed mathematics; but he at the same time admitted that the beneficial effect produced by mathematical study on the intellect, though a collateral advantage, was "no less worthy than that which was principal and intended." But it is evident that his views underwent a change. When, near twenty years later, he published the *De Augmentis*, which is the Treatise on the Advancement of Learning, greatly expanded and carefully corrected, he made important alterations in the part which related to mathematics. He condemned with severity the high pretensions of the mathematicians, "*delicias et fastum mathematicorum.*" Assuming the well-being of the human race to be the end of knowledge,* he pronounced that mathematical science could claim no higher rank than that of an appendage or auxiliary to other

sciences. Mathematical science, he says, is the handmaid of natural philosophy; she ought to demean herself as such; and he declares that he cannot conceive by what ill chance it has happened that she presumes to claim precedence over her mistress. He predicts—a prediction which would have made Plato shudder—that as more and more discoveries are made in physics, there will be more and more branches of mixed mathematics. Of that collateral advantage the value of which, twenty years before, he rated so highly, he says not one word. This omission cannot have been the effect of mere inadvertence. His own treatise was before him. From that treatise he deliberately expunged whatever was favourable to the study of pure mathematics, and inserted several keen reflections on the ardent votaries of that study. This fact, in our opinion, admits of only one explanation. Bacon's love of those pursuits which directly tend to improve the condition of mankind, and his jealousy of all pursuits merely curious, had grown upon him, and had, it may be, become immoderate. He was afraid of using any expression which might have the effect of inducing any man of talents to employ in speculations, useful only to the mind of the speculator, a single hour which might be employed in extending the empire of man over matter.* If Bacon erred here, we must acknowledge that we greatly prefer his error to the opposite error of Plato. We have no patience with a philosophy which, like those Roman matrons who swallowed abortives in order to preserve their shapes, takes pains to be barren for fear of being homely.

Let us pass to astronomy. This was one of the sciences which Plato exhorted his disciples to learn, but for reasons far removed from common habits of thinking. "Shall we set down astronomy," says Socrates, "among the subjects of study?" † "I think so," answers his young friend Glaucon; "to know something about the seasons, the months, and the years is of use for military purposes, as well as for agriculture and navigation." "It amuses me," says Socrates, "to see how afraid you are, lest the common herd of people should accuse you of recom-

* Compare the passage relating to mathematics in the Second Book of the Advancement of Learning, with the *De Augmentis*, Lib. 8, Cap. 6.

† Plato's *Republic* Book 7

* *Usui et commodis hominum consulimus.*

mending useless studies." He then proceeds, in that pure and magnificent diction which, as Cicero said, Jupiter would use if Jupiter spoke Greek, to explain, that

The use of astronomy. the use of astronomy is not to add to the vulgar comforts of life, but to

assist in raising the mind to the contemplation of things which are to be perceived by the pure intellect alone. The knowledge of the actual motions of the heavenly bodies Socrates considers as of little value. The appearances which make the sky beautiful at night are, he tells us, like the figures which a geometrician draws on the sand, mere examples, mere helps to feeble minds. We must get beyond them; we must neglect them; we must attain to an astronomy which is as independent of the actual stars as geometrical truth is independent of the lines of an ill-drawn diagram. This is, we imagine, very nearly, if not exactly, the astronomy which Bacon compared to the ox of Prometheus,* a sleek, well-shaped hide, stuffed with rubbish, goodly to look at, but containing nothing to eat. He complained that astronomy had, to its great injury, been separated from natural philosophy, of which it was one of the noblest provinces, and annexed to the domain of mathematics. The world stood in need, he said, of a very different astronomy, of a living astronomy,† of an astronomy which should set forth the nature, the motion, and the influences of the heavenly bodies, as they really are.‡

On the greatest and most useful of all human inventions, the invention of alphabetical writing, Plato did not look with much complacency.

Plato and letters. He seems to have thought that the use of letters had

operated on the human mind as the use of the go-cart in learning to walk, or of corks in learning to swim, is said to operate on the human body. It was a support which, in his opinion, soon became indispensable to those who used it, which made vigorous exertion first unnecessary and then impossible. The powers of the intellect would, he conceived, have been more fully developed without this delusive aid. Men would have been compelled to exercise the

† *Astronomia viva*.

‡ "Quæ substantiam et motum et influxum celestium, prout re vera sunt proponat." Compare this language with Plato's "τὰ δ' ἐν τῷ οὐρανῷ εἴσονται."

understanding and the memory, and, by deep and assiduous meditation, to make truth thoroughly their own. Now, on the contrary, much knowledge is traced on paper, but little is engraved in the soul. A man is certain that he can find information at a moment's notice when he wants it. He therefore suffers it to fade from his mind. Such a man cannot in strictness be said to know anything. He has the show without the reality of wisdom. These opinions Plato has put into the mouth of an ancient king of Egypt.* But it is evident from the context that they were his own; and so they were understood to be by Quinctilian.† Indeed they are in perfect accordance with the whole Platonic system.

Bacon's views, as may easily be supposed, were widely different.‡ The powers of the memory, he observes, without the help of writing, can do little towards the advancement of any useful science. He acknowledges that the memory may be disciplined to such a point as to be able to perform very extraordinary feats. But on such feats he sets little value. The habits of his mind, he tells us, are such that he is not disposed to rate highly any accomplishment, however rare, which is of no practical use to mankind. As to these prodigious achievements of the memory, he ranks them with the exhibitions of rope-dancers and tumblers. "These two performances," he says, "are much of the same sort. The one is an abuse of the powers of the body; the other is an abuse of the powers of the mind. Both may perhaps excite our wonder; but neither is entitled to our respect."

To Plato, the science of medicine appeared to be of very disputable advantage.§ He did not indeed object to quick cures for acute disorders, or for injuries produced by accidents. But the art which resists the slow sap of a chronic disease, which repairs frames enervated by lust, swollen by gluttony, or inflamed by wine, which encourages sensuality by mitigating the natural punishment of the sensualist, and prolongs existence when the intellect has ceased to retain its entire energy, had no share of his esteem. A life protracted by medical skill he pro-

Powers of the memory.

Medical science.

nounced to be a long death. The exercise of the art of medicine ought, he said, to be tolerated, so far as that art may serve to cure the occasional distempers of men whose constitutions are good. As to those who have bad constitutions, let them die; and the sooner the better. Such men are unfit for war, for magistracy, for the management of their domestic affairs. That, however, is comparatively of little consequence. But they are incapable of study and speculation. If they engage in any severe mental exercise, they are troubled with giddiness and fulness of the head, all which they lay to the account of philosophy. The best thing that can happen to such wretches is to have done with life at once. He quotes mythical authority in support of this doctrine; and reminds his disciples that the practice of the sons of Æsculapius, as described by Homer, extended only to the cure of external injuries.

Far different was the philosophy of Bacon. Of all the sciences, that which he seems to have regarded with the greatest interest was the science which, in Plato's opinion, would not be tolerated in a well-regulated community. To make men perfect was no part of Bacon's plan. His humble aim was to make imperfect men comfortable. The beneficence of his philosophy resembled the beneficence of the common Father, whose sun rises on the evil and the good, whose rain descends for the just and the unjust. In Plato's opinion man was made for philosophy; in Bacon's opinion philosophy was made for man; it was a means to an end; and that end was to increase the pleasures and to mitigate the pains of millions who are not and cannot be philosophers. That a valetudinarian who took great pleasure in being wheeled along his terrace, who relished his boiled chicken and his weak wine and water, and who enjoyed a hearty laugh over the Queen of Navarre's tales, should be treated as a *caput lupinum* because he could not read the *Timæus* without a headache, was a notion which the humane spirit of the English school of wisdom altogether rejected. Bacon would not have thought it beneath the dignity of a philosopher to contrive an improved garden chair for such a valetudinarian, to devise some way of rendering his medicines more palatable, to invent repasts which he might enjoy, and pillows on which he

might sleep soundly; and this though there might not be the smallest hope that the mind of the poor invalid would ever rise to the contemplation of the ideal beautiful and the ideal good. As Plato had cited the religious legends of Greece to justify his contempt for the more recondite parts of the art of healing, Bacon vindicated the dignity of that art by appealing to the example of Christ, and reminded men that the great Physician of the soul did not disdain to be also the Physician of the body.*

When we pass from the science of medicine to that of legislation, we find the same difference between the systems of these two great men. Plato, at the commencement of the Dialogue on Laws, lays it down as a fundamental principle that the end of legislation is to make men virtuous. It is unnecessary to point out the extravagant conclusions to which such a proposition leads. Bacon well knew to how great an extent the happiness of every society must depend on the virtue of its members; and he also knew what legislators can and what they cannot do for the purpose of promoting virtue. The view which he has given of the end of legislation, and of the principal means for the attainment of that end, has always seemed to us eminently happy, even among the many happy passages of the same kind with which his works abound. "Finis et scopus quem leges intueri atque ad quem jussiones et sanctiones suas dirigere debent, non alius est quam ut cives feliciter degant. Id fiet si pietate et religione recte instituti, moribus honesti, armis adversus hostes externos tuti, legum auxilio adversus seditiones et privatas injurias muniti, imperio et magistratibus obsequentes, copiis et opibus locupletes et florentes fuerint."† The end is the well-being of the people. The means are the imparting of moral and religious education; the providing of everything necessary for defence against foreign enemies; the maintaining of internal order; the establishing of a judicial, financial, and commercial system, under which wealth may be rapidly accumulated and securely enjoyed.

Even with respect to the form in which laws ought to be drawn, there is a remarkable difference of opinion between the Greek and the Englishman. Plato thought

* *De Augmentis*, Lib. 4, Cap. 2.

† *Ib.* Lib. 8, Cap. 3, Aph. 5.

a preamble essential; Bacon thought it mischievous. Each was consistent with himself. Plato, considering the moral improvement of the people as the end of legislation, justly inferred that a law which commanded and threatened, but which neither convinced the reason, nor touched the heart, must be a most imperfect law. He was not content with deterring from theft a man, who still continued to be a thief at heart, with restraining a son who hated his mother from beating his mother. The only obedience on which he set much value was the obedience which an enlightened understanding yields to reason, and which a virtuous disposition yields to precepts of virtue. He really seems to have believed that, by prefixing to every law an eloquent and pathetic exhortation, he should, to a great extent, render penal enactments superfluous. Bacon entertained no such romantic hopes; and he well knew the practical inconveniences of the course which Plato recommended. "Neque nobis," says he, "prologi legum qui inepti olim habiti sunt, et leges introducunt disputantes non jubentes, utique placerent, si priscos mores ferre possemus. . . . Quantum fieri potest prologi evitentur, et lex incipiat a jussione."*

Plato and Bacon.

Had Plato lived to finish the Critias, a comparison between that noble fiction and the new Atlantis would probably have furnished us with still more striking instances. It is amusing to think with what horror he would have seen such an institution as Solomon's House rising in his republic; with what vehemence he would have ordered the brewhouses, the perfume-houses, and the dispensatories to be pulled down; and with what inexorable rigour he would have driven beyond the frontier all the Fellows of the College, Merchants of Light and Depradators, Lamps and Pioneers.

The Critias.

To sum up the whole, we should say that the aim of the Platonic philosophy was to exalt man into a god. The aim of the Baconian philosophy was to provide man with what he requires while he continues to be a man. The aim of the Platonic philosophy was to raise us far above vulgar wants. The aim of the Baconian philosophy was to supply our vulgar wants. The former aim was noble; but

Different aims.

the latter was attainable. Plato drew a good bow; but, like Acestes in Virgil he aimed at the stars; and therefore, though there was no want of strength or skill, the shot was thrown away. His arrow was indeed followed by a track of dazzling radiance, but it struck nothing.

"Volans liquidis in nubibus arsit arundo Signavitique viam flammis, tenuisque recessit Consumta in ventos."

Bacon fixed his eye on a mark which was placed on the earth, and within bow-shot, and hit it in the white. The philosophy of Plato began in words and ended in words, noble words indeed, words such as were to be expected from the finest of human intellects exercising boundless dominion over the finest of human languages. The philosophy of Bacon began in observations and ended in arts.

The boast of the ancient philosophers was that their doctrine formed the minds of men to a high degree of wisdom and virtue. This was indeed the only practical good which the most celebrated of those teachers even pretended to effect; and undoubtedly, if they had effected this, they would have deserved the greatest praise. But the truth is that, in those very matters in which alone they professed to do any good to mankind, in those very matters for the sake of which they neglected all the vulgar interests of mankind, they did nothing, or worse than nothing. They promised what was impracticable; they despised what was practicable; they filled the world with long words and long beards; and they left it as wicked and as ignorant as they found it.

Boast of ancient philosophers.

An acre in Middlesex is better than a principality in Utopia. The smallest actual good is better than the most magnificent promises of impossibilities. The wise man of the Stoics would, no doubt, be a grander object than a steam-engine. But there are steam-engines. And the wise man of the Stoics is yet to be born. A philosophy which should enable a man to feel perfectly happy while in agonies of pain would be better than a philosophy which assuages pain. But we know that there are remedies which will assuage pain; and we know that the ancient sages liked the toothache just as little as their neighbours. A philosophy which should

Actual good and promises.

* De Augustis, Lib. 8, Cap. 3, Aph. 69.

extinguish cupidity would be better than a philosophy which should devise laws for the security of property. But it is possible to make laws which shall, to a very great extent, secure property. And we do not understand how any motives which the ancient philosophy furnished could extinguish cupidity. We know indeed that the philosophers were no better than other men. From the testimony of friends as well as of foes, from the confessions of Epictetus and Seneca, as well as from the sneers of Lucian and the fierce invectives of Juvenal, it is plain that these teachers of virtue had all the vices of their neighbours, with the additional vice of hypocrisy. Some people may think the object of the Baconian philosophy a low object, but they cannot deny that, high or low, it has been attained. They cannot deny that every year makes an addition to what Bacon called "fruit." They cannot deny that mankind have made, and are making, great and constant progress in the road which he pointed out to them. Was there any such progressive movement among the ancient philosophers? After they had been declaiming eight hundred years, had they made the world better than when they began? Our belief is that, among the philosophers themselves, instead of a progressive improvement there was a progressive degeneracy. An abject superstition which Democritus or Anaxagoras would have rejected with scorn, added the last disgrace to the long dotage of the Stoic and Platonic schools. Those unsuccessful attempts to articulate which are so delightful and interesting in a child shock and disgust in an aged paralytic; and in the same way, those wild and mythological fictions which charm us, when we hear them lisped by Greek poetry in its infancy, excite a mixed sensation of pity and loathing, when mumbled by Greek philosophy in its old age. We know that guns, cutlery, spy-glasses, clocks, are better in our time than they were in the time of our fathers, and were better in the time of our fathers than they were in the time of our grandfathers. We might, therefore, be inclined to think that, when a philosophy which boasted that its object was the elevation and purification of the mind, and which for this object neglected the sordid office of ministering to the comforts of the body, had flourished in the highest honour during many hun-

dreds of years, a vast moral amelioration must have taken place. Was it so? Look at the schools of this wisdom four centuries before the Christian era and four centuries after that era. Compare the men whom those schools formed at those two periods. Compare Plato and Libanius. Compare Pericles and Julian. This philosophy confessed, nay boasted, that for every end but one it was useless. Had it attained that one end?

Suppose that Justinian, when he closed the schools of Athens, had called on the last few sages who still haunted the Portico, and lingered round the ancient plane-trees, to show their title to public veneration: **A supposition.** suppose that he had said: "A thousand years have elapsed since, in this famous city, Socrates posed Protagoras and Hippias; during those thousand years a large proportion of the ablest men of every generation has been employed in constant efforts to bring to perfection the philosophy which you teach; that philosophy has been munificently patronized by the powerful; its professors have been held in the highest esteem by the public; it has drawn to itself almost all the sap and vigour of the human intellect; and what has it effected? What profitable truth has it taught us which we should not equally have known without it? What has it enabled us to do which we should not have been equally able to do without it?" Such questions, we suspect, would have puzzled Simplicius and Isidore. Ask a follower of Bacon what the new philosophy, as it was called in the time of Charles the Second, has effected for mankind, and his answer is ready: "It has lengthened life; it has mitigated pain; it has extinguished diseases; it has increased the fertility of the soil; it has given new securities to the mariner; it has furnished new arms to the warrior; it has spanned great rivers and estuaries with bridges of form unknown to our fathers; it has guided the thunderbolt innocuously from heaven to earth; it has lighted up the night with the splendour of the day; it has extended the range of the human vision; it has multiplied the power of the human muscles; it has accelerated motion; it has annihilated distance; it has facilitated intercourse, correspondence, all friendly offices, all despatch of business; it has enabled man to descend to the depths of the sea, to soar into the air, to penetrate securely into the noxious recesses of the earth,

to traverse the land in cars which whirl along without horses, and the ocean in ships which run ten knots an hour against the wind. These are but a part of its fruits, and of its first fruits. For it is a philosophy which never rests, which has never attained, which is "never perfect. Its law is progress. A point which yesterday was invisible is its goal to-day, and will be its starting-post to-morrow."

Great and various as the powers of Bacon were, he owes his wide and durable fame chiefly to this, that all those powers received their direction from

Common sense.

common sense. His love of the vulgar useful, his strong sympathy with the popular notions of good and evil, and the openness with which he avowed that sympathy, are the secret of his influence. There was in his system no cant, no illusion. He had no anointing for broken bones, no fine theories *de finibus*, no arguments to persuade men out of their senses. He knew that men, and philosophers as well as other men, do actually love life, health, comfort, honour, security, the society of friends, and do actually dislike death, sickness, pain, poverty, disgrace, danger, separation from those to whom they are attached. He knew that religion, though it often regulates and moderates these feelings, seldom eradicates them; nor did he think it desirable for mankind that they should be eradicated. The plan of eradicating them by conceits like those of Seneca, or syllogisms like those of Chrysippus, was too preposterous to be for a moment entertained by a mind like his. He did not understand what wisdom there could be in changing names where it was impossible to change things; in denying that blindness, hunger, the gout, the rack, were evils, and calling them *ἀποπροήγμενα*; in refusing to acknowledge that health, safety, plenty were good things, and dubbing them by the name of *ἀδιάφορα*. In his opinions on all these subjects, he was not a Stoic, nor an Epicurian, nor an Academic, but what would have been called by Stoics, Epicureans, and Academics a mere *ιδιώτης*, a mere common man. And it was precisely because he was so that his name makes so great an era in the history of the world. It was because he dug deep that he was able to pile high. It was because, in order to lay his foundations, he went down into those parts of human nature which lie low, but which are not liable to change, that the fabric which he

reared has risen to so stately an elevation, and stands with such immovable strength.

We have sometimes thought that an amusing fiction might be written, in which a disciple of Epictetus and a disciple of Bacon should be introduced as fellow-travellers. They come to

An amusing fiction.

a village where the small-pox has just begun to rage, and find houses shut up, intercourse suspended, the sick abandoned, mothers weeping in terror over their children. The Stoic assures the dismayed population that there is nothing bad in the small-pox, and that to a wise man disease, deformity, death, the loss of friends, are not evils. The Baconian takes out a lancet and begins to vaccinate. They find a body of miners in great dismay. An explosion of noisome vapours has just killed many of those who were at work; and the survivors are afraid to venture into the cavern. The Stoic assures them that such an accident is nothing but a mere *ἀποπροήγμενον*. The Baconian, who has no such fine word at his command, contents himself with devising a safety-lamp. They find a shipwrecked merchant wringing his hands on the shore. His vessel with an inestimable cargo has just gone down, and he is reduced in a moment from opulence to beggary. The Stoic exhorts him not to seek happiness in things which lie without himself, and repeats the whole chapter of Epictetus *πρὸς τοὺς τὴν ἀπορίαν δεδοικότας*. The Baconian constructs a diving-bell, goes down in it, and returns with the most precious effects from the wreck. It would be easy to multiply illustrations of the difference between the philosophy of thorns and the philosophy of fruit, the philosophy of words and the philosophy of works.

Bacon has been accused of overrating the importance of those sciences which minister to the physical well-being of man, and of underrating the importance of moral philosophy; and it cannot be denied that persons who read the *Novum Organum* and the *De Augmentis*, without adverting to the circumstances under which those works were written, will find much that may seem to countenance the accusation. It is certain, however, that, though in practice he often went very wrong, and though, as his historical work and his essays prove, he did not hold, even in theory, very strict opinions

An accusation.

on points of political morality, he was far too wise a man not to know how much our well-being depends on the regulation of our minds. The world for which he wished was not, as some people seem to imagine, a world of water-wheels, power-looms, steam-carriages, sensualists, and knaves. He would have been as ready as Zeno himself to maintain that no bodily comforts which could be devised by the skill and labour of a hundred generations would give happiness to a man whose mind was under the tyranny of licentious appetite, of envy, of hatred, or of fear. If he sometimes appeared to ascribe importance too exclusively to the arts which increase the outward comforts of our species, the reason is plain. Those arts had been most unduly depreciated. They had been represented as unworthy of the attention of a man of liberal education. "Cogitavit," says Bacon of himself, "eam esse opinionem sive æstimationem humidam et dampnosam, minui nempe majestatem mentis humanæ, si in experimentis et rebus particularibus, sensui subjectis, et in materia terminatis, diu ac multum versetur: præsertim cum hujusmodi res ad inquirendum laboriosæ, ad meditandum ignobiles, ad discendum asperæ, ad practicam illiberales, numero infinitæ, et subtilitate pusillæ videri soleant, et ob hujusmodi conditiones, gloriæ artium minus sint accomodatæ."*

Arts worthy of alteration. many arts which were of the greatest utility, and which were susceptible of the greatest improvements, to be neglected by speculators, and abandoned to joiners, masons, smiths, weavers, apothecaries. It was necessary to assert the dignity of those arts, to bring them prominently forward, to proclaim that, as they have a most serious effect on human happiness, they are not unworthy of the attention of the highest human intellects. Again, it was by illustrations drawn from these arts that Bacon could most easily illustrate his principles. It was by improvements effected in these arts that the soundness of his principles could be most speedily and decisively brought to the

* *Cogitata et visa*. The expression *opinio humida* may surprise a reader not accustomed to Bacon's style. The allusion is to the maxim of Heraclitus the obscure; "Dry light is the best." By dry light, Bacon understood the light of the intellect, not obscured by the mists of passion, interest, or prejudice.

test, and made manifest to common understandings. He acted like a wise commander who thins every other part of his line to strengthen a point where the enemy is attacking with peculiar fury, and on the fate of which the event of the battle seems likely to depend. In the *Novum Organum*, however, he distinctly and most truly declares that his philosophy is no less a Moral than a Natural Philosophy, that, though his illustrations are drawn from physical science, the principles which those illustrations are intended to explain are just as applicable to ethical and political inquiries as to inquiries into the nature of heat and vegetation.*

He frequently treated of moral subjects; and almost always he brought to those subjects that spirit which was the essence of his whole system. He has left us many admirable practicable observations on what he somewhat quaintly called the Georgics of the mind, on the mental culture which tends to produce good dispositions. Some persons, he said, might accuse him of spending labour on a matter so simple that his predecessors had passed him by with contempt. He desired such persons to remember that he had from the first announced the objects of his search to be not the splendid and the surprising, but the useful and the true; not the deluding dreams which go forth through the shining portal of ivory, but the humbler realities of the gate of horn.†

True to this principle, he indulged in no rants about the fitness of things, the all-sufficiency of virtue, and the dignity of human nature. He dealt not at all in resounding nothings, such as those with which Bolingbroke pretended to comfort himself in exile, and in which Cicero vainly sought consolation after the loss of Tullia. The casuistical subtleties which occupied the attention of the keenest spirits of his age, had, it should seem, no attractions for him. The doctors whom Escobar afterwards compared to the four beasts and the four-and-twenty elders in the Apocalypse Bacon dismissed with most contemptuous brevity. "Inanes plerumque evadunt et futiles."‡ Nor did he ever meddle with those enigmas which have puzzled hundreds of generations, and will puzzle hundreds more. He said

* *Novum Organum*, Lib. 1, Aph. 127.

† *De Augmentis*, Lib. 7, Cap. 3.

‡ *Ib.*, Lib. 7, Cap. 2.

The Georgics
of the mind.

nothing about the grounds of moral obligation, or the freedom of the human will. He had no inclination to employ himself in labours resembling those of the damned in the Grecian Tartarus, to spin for ever on the same wheel round the same pivot, to gape for ever after the same deluding clusters, to pour water for ever into the same bottomless buckets, to pace for ever to and fro on the same wearisome path after the same recoiling

stone. He exhorted his **Exhortations.** disciples to prosecute researches of a very different description, to consider moral science as a practical science, a science of which the object was to cure the diseases and perturbations of the mind, and which could be improved only by a method analogous to that which has improved medicine and surgery. Moral philosophers ought, he said, to set themselves vigorously to work for the purpose of discovering what are the actual effects produced on the human character by particular modes of education, by the indulgence of particular habits, by the study of particular books, by society, by emulation, by imitation. Then we might hope to find out what mode of training was most likely to preserve and restore moral health.*

What he was as a natural philosopher and a moral philosopher, that he was

Bacon as a theologian. also as a theologian. He was, we are convinced, a sincere believer in the divine authority of the Christian revelation. Nothing can be found in his writings, or in any other writings, more eloquent and pathetic than some passages which were apparently written under the influence of strong devotional feeling. He loved to dwell on the power of the Christian religion to effect much that the ancient philosophers could only promise. He loved to consider that religion as the bond of charity, the curb of evil passions, the consolation of the wretched, the support of the timid, the hope of the dying. But controversies on speculative points of theology seem to have engaged scarcely any portion of his attention. In what he wrote on Church Government he showed, as far as he dared, a tolerant and charitable spirit. He troubled himself not at all about Homoousians and Homoiousians, Monothelites and Nestorians. He lived in an age in which disputes on the most

subtle points of divinity excited an intense interest throughout Europe, and nowhere more than in England. He was placed in the very thick of the conflict. He was in power at the time of the Synod of Dort, and must for months have been daily deafened with talk about election, reprobation, and final perseverance. Yet we do not remember a line in his works from which it can be inferred that he was either a Calvinist or an Arminian. While the world was resounding with the noise of a disputatious philosophy and a disputatious theology, the Baconian school, like Alworthy seated between Square and Thwackum, preserved a calm neutrality, half scornful, half benevolent, and content with adding to the sum of practical good, left the war of words to those who liked it.

We have dwelt long on the end of the Baconian philosophy, because from this peculiarity all the other peculiarities of that philosophy necessarily arose. Indeed, scarcely any person who proposed to himself the same end with Bacon could fail to hit upon the same means.

The vulgar notion about Bacon we take to be this, that he invented a new method of arriving at truth, which method is called Induction, and that he detected some fallacy in the syllogistic reasoning which had been in vogue before his time. This notion is about as well founded as that of the people who, in the Middle Ages, imagined that Virgil was a great conjurer. Many who are far too well informed to talk such extravagant nonsense entertain what we think incorrect notions as to what Bacon really effected in this matter.

The inductive method has been practised ever since the beginning of the world by every human being. It is constantly practised by the most ignorant clown, by the most thoughtless school-boy, by the very child at the breast. That method leads the clown to the conclusion that if he sows barley he shall not reap wheat. By that method the school-boy learns that a cloudy day is the best for catching trout. The very infant, we imagine, is led by induction to expect milk from his mother or nurse, and none from his father.

Not only is it not true that Bacon invented the inductive method; but it is

* *De Augmentis*, Lib. 7, Cap. 8.

not true that he was the first person who correctly analyzed that method and explained its uses. Aristotle had long before pointed out the absurdity of supposing that syllogistic reasoning could ever conduct men to the discovery of any new principle, had shown that such discoveries must be made by induction, and by induction alone, and had given the history of the inductive process, concisely indeed, but with great perspicuity and precision.

Again, we are not inclined to ascribe much practical value to that analysis of the inductive method which Bacon has

Analysis of the inductive method.

given in the second book of the *Novum Organum*. It is indeed an elaborate and correct analysis. But it is an analysis of that which we are all doing from morning to night, and which we continue to do even in our dreams. A plain man finds his stomach out of order. He never heard Lord Bacon's name. But he proceeds in the strictest conformity with the rules laid down in the second book of the *Novum Organum*, and satisfies himself that minced pies have done the mischief. "I ate minced pies on Monday and Wednesday, and I was kept awake by indigestion all night." This is the *comparentia ad intellectum instantiarum convenientium*. "I did not eat any on Tuesday and Friday, and I was quite well." This is the *comparentia instantiarum in proximo quæ natura data privantur*. "I ate very sparingly of them on Sunday, and was very slightly indisposed in the evening. But on Christmas-day I almost dined on them, and was so ill that I was in great danger." This is the *comparentia instantiarum secundum magis et minus*. "It cannot have been the brandy which I took with them. For I have drunk brandy daily for years without being the worse for it." This is the *rejectio naturarum*. Our invalid then proceeds to what is termed by Bacon the *Vindemiatio*, and pronounces that minced pies do not agree with him.

We go on to what are called by Bacon *prærogativæ instantiarum*. For example: It must be something peculiar to "minced pies," for I can eat any other pastry without the least bad effect. This is the *instantia solitaria*. We might easily proceed; but we have already sufficiently explained our meaning.

We repeat that we dispute neither the ingenuity nor the accuracy of the theory contained in the second book of the

Novum Organum; but we think that Bacon greatly overrated its utility. We conceive that the inductive process, like many other processes, is not likely to

The inductive process.

be better performed merely because men know how they perform it. William Tell would not have been one whit more likely to cleave the apple if he had known that his arrow would describe a parabola under the influence of the attraction of the earth. Captain Barclay would not have been more likely to walk a thousand miles in a thousand hours, if he had known the place and name of every muscle in his legs. Monsieur Jourdain probably did not pronounce D and F more correctly after he had been apprised that D is pronounced by touching the teeth with the end of the tongue, and F by putting the upper teeth on the lower lip. We cannot perceive that the study of grammar makes the smallest difference in the speech of people who have always lived in good society. Not one Londoner in ten thousand can lay down the rules for the proper use of *will* and *shall*. Yet not one Londoner in a million ever misplaces his *will* and *shall*. No man uses figures of speech with more propriety because he knows that one figure is called a metonymy and another a synecdoche. A drayman in a passion calls out, "You are a pretty fellow," without suspecting that he is uttering irony, in one of the four primary tropes. The old systems of rhetoric were never regarded by the most experienced and discerning judges as of any use for the purpose of forming an orator. "Ego hanc vim intelligo," said Cicero, "esse in præceptis omnibus, non ut ea secuti oratores eloquentiæ laudem sint adepti, sed quæ sua sponte homines eloquentes facerent, ea quosdam observasse, atque id egisse; sic esse non eloquentiam ex artificio, sed artificium ex eloquentia natum." We must own that we entertain the same opinion concerning the study of Logic which Cicero entertained concerning the study of Rhetoric. A man of sense syllogizes in *celarent* and *cesare* all day long without suspecting it; and, though he may not know what an *ignoratio elenchi* is, has no difficulty in exposing it whenever he falls in with it; which is likely to be as often as he falls in with a Reverend Master of Arts nourished on mode and figure in the cloisters of Oxford. Considered merely as an intellectual feat, the *Organum* of Aristotle can scarcely be admired too

highly. But the more we compare individual with individual, school with school, nation with nation, generation with generation, the more do we lean to the opinion that the knowledge of the theory of logic has no tendency whatever to make men good reasoners.

Aristotle's
Organum.

What Aristotle did for the syllogistic process Bacon has, in the second book of the *Novum Organum*, done for the inductive process; that is to say, he has analyzed it well. His rules are quite proper, but we do not need them, because they are drawn from our own constant practice.

But, though everybody is constantly performing the process described in the second book of the *Novum Organum*, some men perform it well and some perform it ill.

Some are led by it to truth, and some to error. It led Franklin to discover the nature of lightning. It led thousands, who had less brains than Franklin, to believe in animal magnetism. But this was not because Franklin went through the process described by Bacon, and the dupes of Mesmer through a different process. The *comparentiæ* and *rejectiones* of which we have given examples will be found in the most unsound inductions. We have heard that an eminent judge of the last generation was in the habit of jocosely propounding after dinner a theory, that the cause of the prevalence of Jacobinism was the practice of bearing three names. He quoted on the one side Charles James Fox, Richard Brinsley Sheridan, John Horne Tooke, John Phil-

An after-dinner
theory.

pot Curran, Samuel Taylor Coleridge, Theobald Wolfe Tone. These were *instantiæ convenientes*. He then proceeded to cite instances *absentiæ in proximo*, William Pitt, John Scott, William Windham, Samuel Horsley, Henry Dundas, Edmund Burke. He might have gone on to instances *secundum magis et minus*. The practice of giving children three names has been for some time a growing practice, and Jacobinism has also been growing. The practice of giving children three names is more common in America than in England. In England we still have a King, and a House of Lords; but the Americans are Republicans. The *rejectiones* are obvious. Burke and Theobald Wolfe Tone are both Irishmen; therefore the being an Irish-

man is not the cause of Jacobinism. Horsley and Horne Tooke are both clergymen; therefore the being a clergyman is not the cause of Jacobinism. Fox and Windham were both educated at Oxford; therefore the being educated at Oxford is not the cause of Jacobinism. Pitt and Horne Tooke were both educated at Cambridge; therefore the being educated at Cambridge is not the cause of Jacobinism. In this way, our inductive philosopher arrives at what Bacon calls the *Vintage*, and pronounces that the having three names is the cause of Jacobinism.

Here is an induction corresponding with Bacon's analysis and ending in a monstrous absurdity. In what, then, does this induction differ from the induction which leads us to the conclusion that the presence of the sun is the cause of our having more light by day than by night? The difference evidently is not in the kind of instances, but in the number of instances; that is to say, the difference is not in that part of the process for which Bacon has given precise rules, but in a circumstance for which no precise rule can possibly be given. If the learned author of the theory about Jacobinism had enlarged either of his tables a little, his system would have been destroyed. The names of Tom Payne and William Wyndham Grenville would have been sufficient to do the work.

It appears to us, then, that the difference between a sound and unsound induction—or, to use the Baconian phraseology, between the interpretation of nature and the anticipation of nature—does not lie in this—that the interpreter of nature goes through the process analyzed in his second book of the *Novum Organum*, and the anticipator through a different process. They may both perform the same process. But the anticipator performs it foolishly or carelessly; the interpreter performs it with patience, attention, sagacity, and judgment. Now precepts can do little towards making men patient and attentive, and still less towards making them sagacious and judicious. It is very well to tell men to be on their guard against prejudices, not to believe facts on slight evidence, not to be content with a scanty collection of facts, to put out of their minds the *idola* which Bacon has so finely described. But these rules are too general to be of much practical use. The question is, What is a preju-

Sound and
unsound
induction.

dice? How long does the incredulity with which I hear a new theory propounded continue to be a wise and salutary incredulity? When does it become an *idolum specus*, the unreasonable pertinacity of a too sceptical mind? What is slight evidence? What collection of facts is scanty? Will ten instances do, or fifty, or a hundred? In how many months would the first human beings who settled on the shores of the ocean have been justified in believing that the moon had an influence on the tides? After how many experiments would Jenner have been justified in believing that he had discovered a safeguard against the small-pox? These are questions to which it would be most desirable to have a precise answer; but, unhappily, they are questions to which no precise answer can be returned.

We think, then, that it is possible to lay down accurate rules, as Bacon has done, for the performing of that part of the inductive process which all men perform alike; but that these rules, though accurate, are not wanted, because in truth they only tell us to do what we are all doing. We think that it is impossible to lay down any precise rule for the performing of that part of the inductive process which a great experimental philosopher performs in one way, and a superstitious old woman in another.

On this subject, we think, Bacon was in an error. He certainly attributed to his rules a value which did not belong to them. He went so far as to say, that, if his method of making discoveries were adopted, little would depend on the degree of force or acuteness of any intellect; that all minds would be reduced to one level, that his philosophy resembled a compass or a rule which equalizes all hands, and enables the most unpractised person to draw a more correct circle or line than the best draughtsman can produce without such aid.* This really seems to us as extravagant as it would have been in Lindley Murray to announce that everybody who should learn his Grammar would write as good English as Dryden, or in that very able writer, Dr. Whatley, to promise that all the readers of his Logic would reason like Chillingworth, and that all the readers of his Rhetoric would speak like Burke.

Rules not needed.

Bacon in error.

That Bacon was altogether mistaken as to this point will now hardly be disputed. His philosophy has flourished during two hundred years, and has produced none of this levelling. The interval between a man of talents and a dunce is as wide as ever; and is never more clearly discernible than when they engage in researches which require the constant use of induction.

It will be seen that we do not consider Bacon's ingenious analysis of the inductive method as a very useful performance. Bacon was not, as we have already said, the inventor of the inductive method. He was not even the person who first

The inductive method.

analyzed the inductive method correctly, though he undoubtedly analyzed it more minutely than any who preceded him. He was not the person who first showed that by the inductive method alone new truth could be discovered. But he was the person who first turned the minds of speculative men, long occupied in verbal disputes, to the discovery of new truth; and, by doing so, he at once gave to the inductive method an importance and dignity which had never before belonged to it. He was not the maker of that road; he was not the discoverer of that road; he was not the person who first surveyed and mapped that road. But he was the person who first called the public attention to an inexhaustible mine of wealth, which had been utterly neglected, and which was accessible by that road alone. By doing so he caused that road, which had previously been trodden only by peasants and higglers, to be frequented by a higher class of travellers.

That which was eminently his own in his system was the end which he proposed to himself. The end being given, the means, as it appears to us, could not well be mistaken. If others had

The end proposed.

aimed at the same object with Bacon, we hold it to be certain that they would have employed the same method with Bacon. It would have been hard to convince Seneca that the invention of a safety-lamp was an employment worthy of a philosopher. It would have been hard to persuade Thomas Aquinas to descend from the making of syllogisms to the making of gunpowder. But Seneca would never have doubted for a moment that it was only by means of a series of experiments that a safety-lamp could be invented. Thomas Aquinas

* *Novum Organum*, Præf. and Lib. 1, Aph. 122.

would never have thought that his *barbara* and *baralipon* would enable him to ascertain the proportion which charcoal ought to bear to saltpetre in a pound of gunpowder. Neither common sense nor Aristotle would have suffered him to fall into such an absurdity.

By stimulating men to the discovery of new truth, Bacon stimulated them to employ the inductive method, the only method, even the ancient philosophers

Discovery of truths.

and the schoolmen themselves being judges, by which new truth can be discovered. By stimulating men to the discovery of useful truth, he furnished them with a motive to perform the inductive process well and carefully. His predecessors had been anticipators of nature. They had been content with first principles at which they had arrived by the most scanty and slovenly induction. And why was this? It was, we conceive, because their philosophy proposed to itself no practical end, because it was merely an exercise of the mind. A man who wants to contrive a new machine or a new medicine has a strong motive to observe accurately and patiently, and to try experiment after experiment. But a man who merely wants a theme for disputation or declamation has no such motive. He is therefore content with premises grounded on assumption, or on the most scanty and hasty induction. Thus, we conceive, the schoolmen acted. On their foolish premises they often argued with great ability; and as their object was "assensum subjugare, non res,"* to be victorious in controversy, not to be victorious over nature, they were consistent. For just as much logical skill could be shown in reasoning on false as on true premises. But the followers of the new philosophy, proposing to themselves the discovery of useful truth as their object, must have altogether failed of attaining that object if they had been content to build theories on superficial induction.

Bacon has remarked † that, in ages when philosophy was stationary, the

Mechanical arts.

mechanical arts went on improving. Why was this? Evidently because the mechanic was not content with so careless a mode of induction as served the purpose of the philosopher. And why was the philosopher more easily satisfied than the

mechanic? Evidently because the object of the mechanic was to mould things, whilst the object of the philosopher was only to mould words. Careful induction is not at all necessary to the making of a good syllogism. But it is indispensable to the making of a good shoe. Mechanics, therefore, have always been, as far as the range of their humble but useful callings extended, not anticipators but interpreters of nature. And when a philosophy arose, the object of which was to do on a large scale what the mechanic does on a small scale, to extend the power and to supply the wants of man, the truth of the premises, which logically is a matter altogether unimportant, became a matter of the highest importance; and the careless induction with which men of learning had previously been satisfied gave place, of necessity, to an induction far more accurate and satisfactory.

What Bacon did for inductive philosophy may, we think, be fairly stated thus. The objects of preceding speculators were objects which could be attained without careful induction. Those speculators, therefore, did not perform the inductive process carefully. Bacon stirred up men to pursue an object which could be attained only by induction, and by induction carefully performed; and consequently induction was more carefully performed. We do not think that the importance of what Bacon did for inductive philosophy has ever been overrated. But we think that the nature of his services is often mistaken, and was not fully understood even by himself. It was not by furnishing philosophers with rules for performing the inductive process well, but by furnishing them with a motive for performing it well, that he conferred so vast a benefit on society.

Nature of Bacon's services.

To give to the human mind a direction which it shall retain for ages is the rare prerogative of a few imperial spirits. It cannot, therefore, be uninteresting to inquire what was the moral and intellectual constitution which enabled Bacon to exercise so vast an influence on the world.

In the temper of Bacon—we speak of Bacon the philosopher, not of Bacon the lawyer and politician—there was a singular union of audacity and sobriety. The promises which he made to mankind might, to a superficial reader, seem to resemble the rants which a great dramatist

* *Novum Organum*, Lib. 1, Aph. 20.

† *De Augmentis*, Lib. 1.

has put in the mouth of an Oriental conqueror half-crazed by good fortune and by violent passions.

“He shall have chariots easier than air,
Which I will have invented; and thyself
That art the messenger shall ride before him,
On a horse cut out of an entire diamond,
That shall be made to go with golden wheels,
I know not how yet.”

But Bacon performed what he promised. In truth, Fletcher would not have dared to make Arbaces promise, in his wildest fits of excitement, the tithe of what the Baconian philosophy has performed.

The true philosophical temperament may, we think, be described in four words,

The philosophical temperament. much hope, little faith; a disposition to believe that anything, however extraordinary, may be done; an indisposition to believe that anything extraordinary has been done. In these points the constitution of Bacon's mind seems to us to have been absolutely perfect. He was at once the Mammon and the Surly of his friend Ben. Sir Epicure did not indulge in visions more magnificent and gigantic. Surly did not sift evidence with keener and more sagacious incredulity.

Closely connected with this peculiarity of Bacon's temper was a striking peculiarity of his understanding. With great minuteness of observation, he had an amplitude of comprehension such as has never yet been vouchsafed to any other human being. The small fine mind of Labruyère had not a more delicate tact than the large intellect of Bacon. The Essays contain abundant proofs that no nice feature of character, no peculiarity in the ordering of a house, a garden, or a court-masque, could escape the notice of one whose mind was capable of taking in the whole world of knowledge. His understanding resembled the tent which the fairy Paribanou gave to Prince Ahmed. Fold it; and it seemed a toy for the hand of a lady. Spread it; and the armies of powerful Sultans might repose beneath its shade.

In keenness of observation he has been equalled, though perhaps never surpassed.

Largeness of mind. But the largeness of his mind was all his own. The glance with which he surveyed the intellectual universe resembled that which the Archangel, from the golden threshold of heaven, darted down into the new creation.

“Round he surveyed,—and well might where
he stood,
So high above the circling canopy
Of night's extended shade,—from eastern
point
Of Libra, to the fleecy star which bears
Andromeda far off Atlantic seas
Beyond the horizon.”

His knowledge differed from that of other men, as a terrestrial globe differs from an Atlas which contains a different country on every leaf.

The towns and roads of England, France, and Germany are better laid down in the Atlas than on the globe. But while we are looking at England we see nothing of France, and while we are looking at France we see nothing of Germany. We may go to the Atlas to learn the bearings and distances of York and Bristol, or of Dresden and Prague. But it is useless if we want to know the bearings and distances of France and Martinique, or of England and Canada. On the globe we shall not find all the market towns in our own neighbourhood; but we shall learn from it the comparative extent and the relative position of all the kingdoms of the earth. “I have taken,” said Bacon, in a letter written when he was only thirty-one, to his uncle Lord Burleigh, “I have taken all knowledge to be my province.” In any other young man, indeed in any other man, this would have been a ridiculous flight of presumption. There have been thousands of better mathematicians, astronomers, chemists, physicians, botanists, mineralogists, than Bacon. No man would go to Bacon's works to learn any particular science or art, any more than he would go to a twelve-inch globe in order to find his way from Kennington turnpike to Clapham Common. The art which Bacon taught was the art of inventing arts. The knowledge in which Bacon excelled all men was a knowledge of the mutual relations of all departments of knowledge.

The mode in which he communicated his thoughts was peculiar to him. He had no touch of that disputatious temper which he often censured in his predecessors. He effected a vast intellectual revolution in opposition to a vast mass of prejudices; yet he never engaged in any controversy; nay, we cannot at present recollect, in all his philosophical works, a single passage of

Bacon's
knowledge.

Mode of com-
municating
thoughts.

a controversial character. All those works might with propriety have been put into the form which he adopted in the work entitled *Cogitata et visa*; "Franciscus Baconus sic cogitavit." These are thoughts which have occurred to me: weigh them well: and take them or leave them.

Borgia said of the famous expedition of Charles the Eighth, that the French had conquered Italy, not with steel, but with chalk; for that the only exploit which they had found necessary for the purpose of taking military occupation of any place had been to mark the doors of the houses where they meant to quarter. Bacon often quoted this saying, and loved to apply it to the victories of his own intellect.* His philosophy, he said, came as a guest, not as an enemy. She found no difficulty in gaining admittance without a contest, into every understanding fitted, by its structure and by its capacity, to receive her. In all this we think that he acted most judiciously; first, because, as he has himself remarked, the difference between his school and other schools was a difference so fundamental that there was hardly any common ground on which a controversial battle could be fought; and, secondly, because his mind, eminently observant, pre-eminently discursive and capacious, was, we conceive, neither formed by nature nor disciplined by habit for dialectical combat.

Though Bacon did not arm his philosophy with the weapons of logic, he adorned her profusely with all the decorations of rhetoric. His eloquence, though not untainted with the vicious taste of his age, would alone have entitled him to a high rank in literature. He had a wonderful talent for packing thought close, and rendering it portable. In wit, if by wit he meant the power of perceiving analogies between things which appear to have nothing in common, he never had an equal, not even Cowley, not even the author of *Hudibras*. Indeed, he possessed this faculty, or rather this faculty possessed him, to a morbid degree. When he abandoned himself to it without reserve, as he did in the *Sapientia Veterum*, and at the end of the second book of the *De Augmentis*, the feats which he performed were not

* *Novum Organum*, Lib. 1, Aph. 35, and elsewhere.

merely admirable, but portentous, and almost shocking. On those occasions we marvel at him as clowns on a fair-day marvel at a juggler, and can hardly help thinking that the devil must be in him.

These, however, were freaks in which his ingenuity now and then wantoned, with scarcely any other object than to astonish and amuse. But it occasionally happened that, when he was engaged in grave and profound investigations, his wit obtained the mastery over all his other faculties, and led him into absurdities into which no dull man could possibly have fallen. We will give the most striking instance which at present occurs to us. In the third book of the *De Augmentis* he tells us that there are some principles which are not peculiar to one science, but are common to several. That part of philosophy which concerns itself with these principles is, in his nomenclature, designated as *philosophia prima*. He then proceeds to mention some of the principles with which this *philosophia prima* is conversant. One of them is this. An infectious disease is more likely to be communicated while it is in progress than when it has reached its height. This, says he, is true in medicine. It is also true in morals; for we see that the example of very abandoned men injures public morality less than the example of men in whom vice has not yet extinguished all good qualities. Again, he tells us that in music a discord ending in a concord is agreeable, and that the same thing may be noted in the affections. Once more he tells us that in physics the energy with which a principle acts is often increased by the antipertinence of its opposite; and that it is the same in the contests of factions. If this be indeed the *philosophia prima*, we are quite sure that the greatest philosophical work of the nineteenth century is Mr. Moore's *Lalla Rookh*. The similitudes which we have cited are very happy similitudes. But that a man like Bacon should have taken them for more, that he should have thought the discovery of such resemblances as these an important part of philosophy, has always appeared to us one of the most singular facts in the history of letters.

The truth is that his mind was wonderfully quick in perceiving analogies of all sorts. But, like several eminent men whom we could name, both living and dead, he sometimes appeared strangely

deficient in the power of distinguishing rational from fanciful analogies, analogies

Rational and
fanciful
analogies. which are arguments from analogies which are mere illustrations, analogies like that which Bishop

Butler so ably pointed out, between natural and revealed religion, from analogies like that which Addison discovered, between the series of Grecian gods carved by Phidias and the series of English kings painted by Kneller. This want of discrimination has led to many strange political speculations. Sir William Temple deduced a theory of government from the properties of the pyramid. Mr. Southey's whole system of finance is grounded on the phenomena of evaporation and rain. In theology this perverted ingenuity has made still wilder work. From the time of Irenæus and Origen down to the present day, there has not been a single generation in which great divines have not been led into the most absurd expositions of Scripture, by mere incapacity to distinguish analogies proper, to use the scholastic phrase, from analogies metaphorical.* It is curious that Bacon has himself mentioned this very kind of delusion among the *idola specus*; and has mentioned it in language which, we are inclined to think, shows that he knew himself to be subject to it. It is the vice, he tells us, of subtle minds to attach too much importance to slight distinctions; it is the vice, on the other hand, of high and discursive intellects to attach too much importance to slight resemblances; and he adds that, when this last propensity is indulged to excess, it leads men to catch at shadows instead of substances.†

Yet we cannot wish that Bacon's wit had been less luxuriant. For, to say nothing of the pleasure which it affords, it was in the vast majority of cases employed for the purpose of making obscure truth plain, of making repulsive truth attractive, of fixing in the mind for ever truth which might otherwise have left but a transient impression.

The poetical faculty was powerful in Bacon's mind, but not, like his wit, so powerful as occasionally to usurp the place of his reason, and to tyrannize over the whole man. No imagination

was ever at once so strong and so thoroughly subjugated. It never stirred but at a signal from good sense. It stopped at the first check from good sense.

Poetical
faculty.

Yet though disciplined to such obedience, it gave noble proofs of its vigour. In truth, much of Bacon's life was passed in a visionary world, amidst things as strange as any that are described in the Arabian Tales, or in those romances on which the curate and barber of Don Quixote's village performed so cruel an *auto-de-fé*, amidst buildings more sumptuous than the palace of Aladdin, fountains more wonderful than the golden water of Parizade, conveyances more rapid than the hippogryph of Ruggiero, arms more formidable than the lance of Astolfo, remedies more efficacious than the balsam of Fierabras. Yet in his magnificent day-dreams there was nothing wild, nothing but what sober reason sanctioned. He knew that all the secrets feigned by poets to have been written in the books of enchanters are worthless when compared with the mighty secrets which are really written in the book of nature, and which, with time and patience, will be read there. He knew that all the wonders wrought by all the talismans in fable were trifles when compared to the wonders which might reasonably be expected from the philosophy of fruit, and that, if his words sank deep into the minds of men, they would produce effects such as superstition had never ascribed to the incantations of Merline and Michael Scott. It was here that he loved to let his imagination loose. He loved to picture to himself the world as it would be when his philosophy should, in his own noble phrase, "have enlarged the bounds of human empire."* We might refer to many instances. But we will content ourselves with the strongest, the description of the House of Solomon in the New Atlantis. By most of Bacon's contemporaries, and by some people of our time, this remarkable passage would, we doubt not, be considered as an ingenious rodomontade, a counterpart to the adventures of Sinbad or Baron Munchausen. The truth is, that there is not to be found in any human composition a passage more eminently distinguished by profound and serene wisdom. The boldness and originality of the fiction is far less wonderful than the nice discernment which carefully excluded from that

* See some interesting remarks on this subject in Bishop Berkeley's *Minute Philosopher*, Dialogue IV.

† *Novum Organum*, Lib. 1, Aph. 56.

* *New Atlantis*.

long list of prodigies everything that can be pronounced impossible, everything that can be proved to lie beyond the mighty magic of induction and time. Already some parts, and not the least startling parts, of this glorious prophecy have been accomplished, even according to the letter; and the whole, construed according to the spirit, is daily accomplishing all around us.

One of the most remarkable circumstances in the history of Bacon's mind is the order in which its powers expanded themselves. With him the fruit came first and remained till the last; the blossoms did not appear till late. In general, the development of the fancy is

Development of mental powers. to the development of the judgment what the growth of a girl is to the growth of a boy. The fancy attains

at an earlier period to the perfection of its beauty, its power, and its fruitfulness; and, as it is first to ripen, it is also first to fade. It has generally lost something of its bloom and freshness before the sterner faculties have reached maturity; and is commonly withered and barren while those faculties still retain all their energy. It rarely happens that the fancy and the judgment grow together. It happens still more rarely that the judgment grows faster than the fancy. This seems, however, to have been the case with Bacon. His boyhood and youth appear to have been singularly sedate. His gigantic scheme of philosophical reform is said by some writers to have been planned before he was fifteen, and was undoubtedly planned while he was still young. He observed as vigilantly, meditated as deeply, and judged as temperately when he gave his first work to the world as at the close of his long career. But in eloquence, in sweetness and variety of expression, and in richness of illustration, his later writings are far superior to those of his youth. In this respect the history of his mind bears some resemblance to the history of the mind of Burke. The treatise on the Sublime and Beautiful, though written on a subject which the coldest metaphysician could hardly treat without being occasionally betrayed into florid writing, is the most unadorned of all Burke's works. It appeared when he was twenty-five or twenty-six. When, at forty, he wrote the Thoughts on the Causes of the existing Discontents, his reason and his judgment had reached their full maturity; but his eloquence

was still in its splendid dawn. At fifty, his rhetoric was quite as rich as good taste would permit; and when he died at almost seventy, it had become ungracefully gorgeous. In his youth he wrote on the emotions produced by mountains and cascades, by the masterpieces of painting and sculpture, by the faces and necks of beautiful women, in the style of a Parliamentary report. In his old age he discussed treaties and tariffs in the most fervid and brilliant language of romance. It is strange that the Essay on the Sublime and Beautiful, and the Letter to a Noble Lord, should be the productions of one man. But it is far more strange that the Essay should have been a production of his youth, and the Letter of his old age.

We will give very short specimens of Bacon's two styles. In 1597 he wrote thus: "Crafty men con-
temn studies; simple men
admire them; and wise men
use them; for they teach not their own
use: that is a wisdom without them, and
won by observation. Read not to con-
tradict, nor to believe, but to weigh and
consider. Some books are to be tasted,
others to be swallowed, and some few to
be chewed and digested. Reading maketh
a full man, conference a ready man, and
writing an exact man. And therefore if
a man write little, he had need have a
great memory; if he confer little, have
a present wit; and if he read little,
have much cunning to seem to know that
he doth not. Histories make men wise,
poets witty, the mathematics subtle,
natural philosophy deep, morals grave,
logic and rhetoric able to contend." It
will hardly be disputed that this is a
passage to be "chewed and digested."
We do not believe that Thucydides him-
self has anywhere compressed so much
thought into so small a space.

In the additions which Bacon afterwards made to the Essays, there is nothing superior in truth or weight to what we have quoted. But his style was constantly becoming richer and softer. The following passage, first published in 1625, will show the extent of the change: "Prosperity is the blessing of the Old Testament; adversity is the blessing of the New, which carrieth the greater benediction and the clearer evidence of God's favour. Yet, even in the Old Testament, if you listen to David's harp you shall hear as many hearse-like airs as carols; and the pencil of the Holy Ghost hath

laboured more in describing the afflictions of Job than the felicities of Solomon. Prosperity is not without many fears and distastes; and adversity is not without comforts and hopes. We see in needle-works and embroideries it is more pleasing to have a lively work upon a sad and solemn ground, than to have a dark and melancholy work upon a lightsome ground. Judge therefore of the pleasure of the heart by the pleasure of the eye. Certainly virtue is like precious odours, most fragrant when they are incensed or crushed; for prosperity doth best discover vice, but adversity doth best discover virtue."

It is by the Essays that Bacon is best known to the multitude. The *Novum Organum* and the *De Augmentis* are much talked of, but little read. They have produced indeed a vast effect on the opinions of mankind; but they have produced it through the operation of intermediate agents. They have moved the intellects which have moved the world.

**Bacon's
Essays.**

It is in the Essays alone that the mind of Bacon is brought into immediate contact with the minds of ordinary readers. There he opens an exoteric school, and talks to plain men, in language which everybody understands, about things in which everybody is interested. He has thus enabled those who must otherwise have taken his merits on trust to judge for themselves; and the great body of readers have, during several generations, acknowledged that the man who has treated with such consummate ability questions with which they are familiar may well be supposed to deserve all the praise bestowed upon him by those who have sat in his inner school.

Without any disparagement to the admirable treatise *De Augmentis*, we must say that, in our judgment, Bacon's great-

**The Novum
Organum.**

est performance is the first book of the *Novum Organum*. All the peculiarities of his extraordinary mind are found there in the highest perfection. Many of the aphorisms, but particularly those of which he gives examples of the instance of the *idola*, show a nicety of observation that has never been surpassed. Every part of the book blazes with wit, but with wit which is employed only to illustrate and decorate truth. No book ever made so great a revolution in the mode of thinking, overthrew so many prejudices, introduced so many new

opinions. Yet no book was ever written in a less contentious spirit. It truly conquers with chalk and not with steel. Proposition after proposition enters into the mind, is received not as an invader, but as a welcome friend, and, though previously unknown, becomes at once domesticated. But what we most admire is the vast capacity of that intellect which, without effort, takes in at once all the domains of science, all the past, the present, and the future, all the errors of two thousand years, all the encouraging signs of the passing times, all the bright hopes of the coming age. Cowley, who was among the most ardent, and not among the least discerning followers of the new philosophy, has, in one of his finest poems, compared Bacon to Moses standing on Mount Pisgah. It is to Bacon, we think, as he appears in the first book of the *Novum Organum*, that the comparison applies with peculiar felicity. There we see the great law-giver looking round from his lonely elevation on an infinite expanse; behind him a wilderness of dreary sands and bitter waters in which successive generations have sojourned, always moving, yet never advancing, reaping no harvest, and building no abiding city; before him a goodly land, a land of promise, a land flowing with milk and honey. While the multitude below saw only the flat sterile desert in which they had so long wandered, bounded on every side by a near horizon, or diversified only by some deceitful mirage, he was gazing from a higher stand on a far lovelier country, following with his eye the long course of fertilizing rivers, through ample pastures, and under the bridges of great capitals, measuring the distances of marts and havens, and portioning out all those wealthy regions from Dan to Beer-sheba.

It is painful to turn back from contemplating Bacon's philosophy to contemplate his life. Yet without so turning back it is impossible fairly to estimate his powers. He left the University at an earlier age than that at which most people repair thither. While yet a boy he was plunged into the midst of diplomatic business. Thence he passed to the study of a vast technical system of law, and worked his way up through a succession of laborious offices to the highest post in his profession. In the meantime he took an active part in every

**Life of
Bacon.**

Parliament; he was an adviser of the Crown; he paid court with the greatest assiduity and address to all whose favour was likely to be of use to him; he lived much in society; he noted the slightest peculiarities of character and the slightest changes of fashion. Scarcely any man had led a more stirring life than that which Bacon led from sixteen to sixty. Scarcely any man has been better entitled to be called a thorough man of the world. The founding of a new philosophy, the imparting of a new direction to the minds of speculators, this was the amusement of his leisure, the work of hours occasionally stolen from the woolsack and the Council Board. This consideration, while it increases the admiration with which we regard his intellect, increases also our regret that such an intellect should so often have been unworthily employed. He well knew the better course, and had, at one time, resolved to pursue it. "I confess," said he in a letter written when he was still young, "that I have as vast contemplative ends as I have moderate civil ends."

Had his civil ends continued to be moderate, he would have been, not only the Moses but the Joshua of philosophy. He would have fulfilled a large part of his own magnificent predictions. He would have led his followers, not only to the verge, but into the heart of the promised land. He would not merely have pointed out, but would have divided

the spoil. Above all, he would have left, not only a great, but a spotless name. Mankind would then have been able to esteem their illustrious benefactor. We should not then be compelled to regard his character with mingled contempt and admiration, with mingled aversion and gratitude. We should not then regret that there should be so many proofs of the narrowness and selfishness of a heart, the benevolence of which was yet large enough to take in all races and all ages. We should not then have to blush for the disingenuousness of the most devoted worshipper of speculative truth, for the servility of the boldest champion of intellectual freedom. We should not then have seen the same man at one time far in the van, and at another time in the rear of his generation. We should not then be forced to own that he who first treated legislation as a science was among the last Englishmen who used the rack, that he who first summoned philosophers to the great work of interpreting nature was among the last Englishmen who sold justice. And we should conclude our survey of a life placidly, honourably, beneficently passed, "in industrious observations, grounded conclusions, and profitable inventions and discoveries,"* with feelings very different from those with which we now turn away from the checkered spectacle of so much glory and so much shame.

* From a Letter of Bacon to Lord Burleigh.

LIFE AND WRITINGS OF SIR WILLIAM TEMPLE.

(EDINBURGH REVIEW, OCT., 1838.)

Memoirs of the Life, Works, and Correspondence of Sir William Temple. By the Right Hon. THOMAS PEREGRINE COURTENAY. 2 Vols. 8vo. London: 1836.

MR. COURTENAY has long been well known to politicians as an industrious and useful official man, and as an upright and consistent member of Parliament.

Writer of the memoir.

He has been one of the moderate, and, at the same time, one of the least pliant members of the Conservative party. His conduct has, indeed, on some questions, been so Whiggish, that both those who applauded and those who condemned it have questioned his claim to be considered as a Tory. But his Toryism, such as it is, he has held fast through all changes of fortune and fashion; and he has at last retired from public life, leaving behind him, to the best of our belief, no personal enemy, and carrying with him the respect and goodwill of many who strongly dissent from his opinions.

This book, the fruit of Mr. Courtenay's leisure, is introduced by a preface in which he informs us that the assistance furnished to him from various quarters "has

taught him the superiority of literature to politics for developing the kindlier feelings, and conducing to an agreeable life." We are truly glad that Mr. Courtenay is so well satisfied with his new employment, and we heartily congratulate him on having been driven by events to make an exchange which, advantageous as it is, few people make while they can avoid it. He has little reason, in our opinion, to envy any of those who are still engaged in a pursuit from which, at most, they can only expect that, by relinquishing liberal studies and social pleasures, by passing nights without sleep, and summers without one glimpse of the beauty of nature, they may attain that

laborious, that invidious, that closely watched slavery which is mocked with the name of power.

The volumes before us are fairly entitled to the praise of diligence, care, good sense, and impartiality; and these qualities are sufficient to make a book valuable, but not quite sufficient to make it readable. Mr. Courtenay has not sufficiently studied the arts of selection and compression. The information with which he furnishes us, must still, we apprehend, be considered as so much raw material. To manufacturers it will be highly useful; but it is not yet in such a form that it can be enjoyed by the idle consumer. To drop metaphor, we are afraid that this work will be less acceptable to those who read for the sake of reading, than to those who read in order to write.

Valuable qualities.

We cannot help adding, though we are extremely unwilling to quarrel with Mr. Courtenay about politics, that the book would not be at all the worse if it contained fewer snarls against the Whigs of the present day. Not only are these passages out of place, but some of them are intrinsically such that they would become the editor of a third-rate party newspaper better than a gentleman of Mr. Courtenay's talents and knowledge. For example, we are told that "it is a remarkable circumstance, familiar to those who are acquainted with history, but suppressed by the new Whigs, that the liberal politicians of the seventeenth century and the greater part of the eighteenth, never extended their liberality to the native Irish, or the professors of the ancient religion." What schoolboy of

Snarls against Whigs.

fourteen is ignorant of this remarkable circumstance? What Whig, new or old, was ever such an idiot, as to think that it could be suppressed? Really we might as well say that it is a remarkable circumstance, familiar to people well read in history, but carefully suppressed by the Clergy of the Established Church, that in the fifteenth century England was Catholic. We are tempted to make some remarks on another passage, which seems to be the peroration of a speech intended to have been spoken against the Reform Bill; but we forbear.

We doubt whether it will be found that the memory of Sir William Temple owes much to Mr. Courtenay's researches. Temple is one of those men whom the world has agreed to praise highly without knowing much about them, and who are therefore more likely to lose than to gain by a close examination. Yet he is not without fair pretensions to the most

honourable place among the statesmen of his time. A few of them equalled or surpassed him in talents;

but they were men of no good repute for honesty. A few may be named whose patriotism was purer, nobler, and more disinterested than his; but they were men of no eminent ability. Morally, he was above Shaftesbury; intellectually, he was above Russell.

To say of a man that he occupied a high position in times of misgovernment, of corruption, of civil and religious faction, that nevertheless he contracted no great stain and bore no part in any great crime, that he won the esteem of a profligate Court and of a turbulent people, without being guilty of any disgraceful subserviency to either, seems to be very high praise; and all this may with truth be said of Temple.

Yet Temple is not a man to our taste. A temper not naturally good, but under

Disposition of Temple. strict command; a constant regard to decorum; a rare caution in playing

that mixed game of skill and hazard, human life; a disposition to be content with small and certain winnings rather than to go on doubling the stake; these seem to us to be the most remarkable features of his character. This sort of moderation, when united, as in him it was, with very considerable abilities, is, under ordinary circumstances, scarcely to be distinguished from the highest and purest integrity, and yet may be perfectly

compatible with laxity of principle, with coldness of heart, and with the most intense selfishness. Temple, we fear, had not sufficient warmth and elevation of sentiment to deserve the name of a virtuous man. He did not betray or oppress his country; nay, he rendered considerable services to her; but he risked nothing for her. No temptation which either the King or the Opposition could hold out ever induced him to come forward as the supporter either of arbitrary or of factious measures. But he was most careful not to give offence by strenuously opposing such measures. He never put himself prominently before the public eye, except at conjunctures when he was almost certain to gain, and could not possibly lose; at conjunctures when the interest of the State, the views of the Court, and the passions of the multitude, all appeared for an instant to coincide. By judiciously availing himself of several of these rare moments, he succeeded in establishing a high character for wisdom and patriotism. When the favourable crisis was passed, he never risked the reputation which he had won. He avoided the great offices of State with a caution almost pusillanimous, and confined himself to quiet and secluded departments of public business, in which he could enjoy moderate but certain advantages without incurring envy. If the circumstances of the country became such that it was impossible to take any part in politics without some danger, he retired to his library and his orchard, and, while the nation groaned under oppression, or resounded with tumult and with the din of civil arms, amused himself by writing memoirs and tying up apricots. His political career bore some resemblance to the military career of Louis the Fourteenth. Louis, lest his royal dignity should be compromised by failure, never repaired to a siege, till it had been reported to him, by the most skilful officers in his service, that nothing could prevent the fall of the place. When this was ascertained, the monarch, in his helmet and cuirass, appeared among the tents, held councils of war, dictated the capitulation, received the keys, and then returned to Versailles to hear his flatterers repeat that Turenne had been beaten at Mariendal, that Condé had been forced to raise the siege of Arras, and that the only warrior whose glory had never been obscured by a single check was Louis the Great. Yet

Military career of Louis XIV.

Condé and Turenne will always be considered as captains of a very different order from the invincible Louis; and we must own that many statesmen who have committed great faults, appear to us to be deserving of more esteem than the faultless Temple. For in truth his faultlessness is chiefly to be ascribed to his extreme dread of all responsibility, to his determination rather to leave his country in a scrape than to run any chance of being in a scrape himself. He seems to have been averse from danger; and it must be admitted that the dangers to which a public man was exposed, in those days of conflicting tyranny and sedition, were of the most serious kind. He could not bear discomfort, bodily or mental. His lamentations, when, in the course of his diplomatic journeys, he was put a little out of his way, and forced, in the vulgar phrase, to rough it, are quite amusing. He talks of riding a day or two on a bad Westphalian road, of sleeping on straw for one night, of travelling in winter when the snow lay on the ground, as if he had gone on an expedition to the North Pole or to the source of the Nile. This kind of valetudinarian effeminacy, this habit of coddling himself, appears in all parts of his conduct. He loved fame, but not with the love of an exalted and generous mind. He loved it as an end, not at all as a means; as a personal luxury, not at all as an instrument of advantage to others. He scraped it together and treasured it up with a timid and niggardly thrift; and never employed the hoard in any enterprise, however virtuous and honourable, in which there was hazard of losing one particle. No wonder if such a person did little or nothing which deserves positive blame. But much more than this may justly be demanded of a man possessed of such abilities, and placed in such a situation. Had Temple been brought before Dante's infernal tribunal, he would not have been condemned to the deeper recesses of the abyss. He would not have been boiled with Dundee in the crimson pool of Bulicame, or hurled with Danby into the seething pitch of Malebolge, or congealed with Churchill in the eternal ice of Giudecca; but he would perhaps have been placed in the dark vestibule next to the shade of that inglorious pontiff,—

“*Che fece per viltate il gran rifiuto.*”

Of course a man is not bound to be a

politician any more than he is bound to be a soldier; and there are perfectly honourable ways of quitting both politics and the military profession. But neither in the one way of life, nor in the other, is any man entitled to take all the sweet and leave all the

Honourable
ways of
quitting pro-
fessions.

sour. A man who belongs to the army only in time of peace, who appears at reviews in Hyde Park, escorts the Sovereign with the utmost valour and fidelity to and from the House of Lords, and retires as soon as he thinks it likely that he may be ordered on an expedition, is justly thought to have disgraced himself. Some portion of the censure due to such a holiday-soldier may justly fall on the mere holiday-politician, who finches from his duties as soon as those duties become difficult and disagreeable, that is to say, as soon as it becomes peculiarly important that he should resolutely perform them.

But though we are far indeed from considering Temple as a perfect statesman, though we place him below many statesmen who have committed very great errors, we cannot deny that, when compared with his contemporaries, he makes a highly respectable appearance. The reaction which followed the victory of the popular party over Charles the First, had produced a hurtful effect on the national character; and this effect was most discernible in the classes and in the places which had

Deterioration
in the national
character.

been most strongly excited by the recent revolution. The deterioration was greater in London than in the country, and was greatest of all in the courtly and official circles. Almost all that remained of what had been good and noble in the Cavaliers and Roundheads of 1642 was now to be found in the middling orders. The principles and feelings which prompted the Grand Remonstrance were still strong among the sturdy yeomen, and the decent God-fearing merchants. The spirit of Derby and Capel still glowed in many sequestered manor-houses; but among those political leaders who, at the time of the Restoration, were still young or in the vigour of manhood, there was neither a Southampton nor a Vane, neither a Falkland nor a Hampden. The pure, fervent, and constant loyalty which, in the preceding reign, had remained unshaken on fields of disastrous battle, in foreign garrets and cellars, and at the

bar of the High Court of Justice, was scarcely to be found among the rising courtiers. As little, or still less, could the new chiefs of parties lay claim to the great qualities of the statesmen who had stood at the head of the Long Parliament. Hampden, Pym, Vane, Cromwell, are discriminated from the ablest politicians of the succeeding generation, by all the strong lineaments which distinguish the men who produce revolutions from the men whom revolutions produce. The leader in a great change, the man who stirs up a reposing community, and overthrows a deeply-rooted system, may be a very depraved man ; but he can scarcely

Moral qualities in leaders.

be destitute of some moral qualities which extort even from enemies a reluctant

admiration, fixedness of purpose, intensity of will, enthusiasm, which is not the less fierce or persevering because it is sometimes disguised under the semblance of composure, and which bears down before it the force of circumstances and the opposition of reluctant minds. These qualities, variously combined with all sorts of virtues and vices, may be found, we think, in most of the authors of great civil and religious movements, in Cæsar, in Mahomet, in Hildebrand, in Dominic, in Luther, in Robespierre ; and these qualities were found, in no scanty measure, among the chiefs of the party which opposed Charles the First. The character of the men whose minds are formed in the midst of the confusion which follows a great revolution is generally very different. Heat, the natural philosophers tell us, produces rarefaction of the air ; and rarefaction of the air produces cold. So zeal makes revolutions ; and revolutions make men zealous for nothing. The politicians of whom we speak, whatever may be their natural capacity or courage, are almost always characterized by a peculiar levity, a peculiar inconstancy, an easy, apathetic way of looking at the most solemn questions, a willingness to leave the direction of their course to fortune and popular opinion, a notion that one public cause is nearly as good as another, and a firm conviction that it is much better to be the hireling of the worst cause than to be a martyr to the best.

This was most strikingly the case with the English statesmen of the generation which followed the Restoration. They had neither the enthusiasm of the Cavalier nor the enthusiasm of the Republican.

They had been early emancipated from the dominion of old usages and feelings ; yet they had not acquired a strong passion for innovation. Accustomed to see old establishments shaking, falling, lying in ruins all around them, accustomed to live under a succession of constitutions of which the average duration was about a twelve-month, they had no religious reverence for prescription, nothing of that frame of mind which naturally springs from the habitual contemplation of immemorial antiquity and immovable stability. Accustomed, on the other hand, to see change after change welcomed with eager hope and ending in disappointment, to see shame and confusion of face follow the extravagant hopes and predictions of rash and fanatical innovators, they had learned to look on professions of public spirit, and on schemes of reform, with distrust and contempt. They sometimes talked the language of devoted subjects, sometimes that of ardent lovers of their country. But their secret creed seems to have been, that loyalty was one great delusion and patriotism another. If they really entertained any predilection for the monarchical or for the popular part of the constitution, for episcopacy or for presbyterianism, that predilection was feeble and languid, and instead of overcoming, as in the times of their fathers, the dread of exile, confiscation, and death, was rarely of power to resist the slightest impulse of selfish ambition or of selfish fear. Such was the texture of the presbyterianism of Lauderdale, and of the speculative republicanism of Halifax. The sense of political honour seemed to be extinct. With the great mass of mankind, the test

Statesmen after the Restoration.

of integrity in a public man is consistency. This test, though very defective, is

A test of integrity.

perhaps the best that any, except very acute or very near observers, are capable of applying ; and does undoubtedly enable the people to form an estimate of the characters of the great, which on the whole approximates to correctness. But during the latter part of the seventeenth century, inconsistency had necessarily ceased to be a disgrace ; and a man was no more taunted with it, than he is taunted with being black at Timbuctoo. Nobody was ashamed of avowing what was common to him with the whole nation. In the short space of about seven years, the

supreme power had been held by the Long Parliament, by a Council of Officers, by Barebones' Parliament, by a Council of Officers again, by a Protector according to the Instrument of Government, by a Protector according to the Humble Petition and Advice, by the Long Parliament again, by a third Council of Officers, by the Long Parliament a third time, by the Convention, and by the King. In such times, consistency is so inconvenient to a man who affects it, and to all who are connected with him, that it ceases to be regarded as a virtue, and is considered as impracticable obstinacy and idle scrupulosity. Indeed, in such times, a good citizen may be bound in duty to serve a succession of Governments. Blake did so in one profession, and Hale in another; and the conduct of both has been approved by posterity. But it is clear that when inconsistency with respect to the most important public questions has ceased to be a reproach, inconsistency with respect to questions of minor importance is not likely to be regarded as dishonourable. In a country in which many very honest people had, within the space of a few months, supported the government of the Protector, that of the Rump, and that of the King, a man was not likely to be ashamed of abandoning his party for a place, or of voting for a bill which he had opposed.

The public men of the times which followed the Restoration were by no means deficient in courage or ability; and some kinds of talent appear to have been developed amongst them to a remarkable, we might almost say, to a morbid and unnatural degree. Neither Theramenes in ancient, nor Talleyrand in modern times, had a finer perception of all the peculiarities of character, and of all the indications of coming change, than some of our countrymen in that age. Their power of reading things of high import, in signs which to others were invisible or unintelligible, resembled magic. But the curse of Reuben was upon them all: "Unstable as water, thou shalt not excel."

This character is susceptible of innumerable modifications, according to the innumerable varieties of intellect and temper in which it may be found. Men of unquiet minds and violent ambition followed a fearfully eccentric course, darted wildly from one extreme to another, served and betrayed all parties in turn, showed their unblushing fore-

heads alternately in the van of the most corrupt administrations and of the most factious oppositions, were privy to the most guilty mysteries, first of the Cabal, and then of the Rye-House Plot, abjured their religion to win their sovereign's favour while they were secretly planning his overthrow, shrived themselves to Jesuits, with letters in cipher from the Prince of Orange in their pockets, corresponded with the Hague whilst in office under James, and began to correspond with St. Germain's as soon as they had kissed hands for office under William. But Temple was not one of these. He was not destitute of ambition. But his was not one of those souls in which unsatisfied ambition anticipates the torture of hell, gnaws like the worm which dieth not, and burns like the fire which is not quenched. His principle was to make sure of safety and comfort, and to let greatness come if it would. It came:

Temple's principle.

he enjoyed it: and, in the very first moment in which it could no longer be enjoyed without danger and vexation, he contentedly let it go. He was not exempt, we think, from the prevailing political immorality. His mind took the contagion, but took it *ad modum recipientis*, in a form so mild that an undiscerning judge might doubt whether it were indeed the same fierce pestilence that was raging all around. The malady partook of the constitutional languor of the patient. The general corruption, mitigated by his calm and unadventurous temperament, showed itself in omissions and desertions, not in positive crimes; and his inactivity, though sometimes timorous and selfish, becomes respectable when compared with the malevolent and perfidious restlessness of Shaftesbury and Sunderland.

Temple sprang from a family which, though ancient and honourable, had, before his time, been scarcely mentioned in our history, but which, long after his death, produced so many eminent men, and formed such distinguished alliances, that it exercised, in a regular and constitutional manner, an influence in the state scarcely inferior to that which, in widely different times, and by widely different arts, the house of Neville attained in England, and that of Douglas in Scotland. During the latter years of George the Second, and through the whole reign of George the Third, members

Temple's family.

An eccentric course.

of that widely spread and powerful connection were almost constantly at the head either of the Government or of the Opposition. There were times when the cousinhood, as it was once nicknamed, would of itself have furnished almost all the materials necessary for the construction of an efficient Cabinet. Within the space of fifty years, three First Lords of the Treasury, three Secretaries of State, two Keepers of the Privy Seal, and four First Lords of the Admiralty, were appointed from among the sons and grandsons of the Countess Temple.

So splendid have been the fortunes of the main stock of the Temple family, continued by female succession. William Temple, the first of the line who attained to any great historical eminence, was of

Sir John Temple.

a younger branch. His father, Sir John Temple, was Master of the Rolls in

Ireland, and distinguished himself among the Privy Councillors of that kingdom by the zeal with which, at the commencement of the struggle between the Crown and the Long Parliament, he supported the popular cause. He was arrested by order of the Duke of Ormond, but regained his liberty by an exchange, repaired to England, and there sat in the House of Commons as burgess for Chichester. He attached himself to the Presbyterian party, and was one of those moderate members who, at the close of the year 1648, voted for treating with Charles on the basis to which that Prince had himself agreed, and who were, in consequence, turned out of the House, with small ceremony, by Colonel Pride. Sir John seems, however, to have made his peace with the victorious Independents; for, in 1653, he resumed his office in Ireland.

Sir John Temple was married to a sister of the celebrated Henry Hammond,

Henry Hammond.

a learned and pious divine, who took the side of the King with very conspicu-

ous zeal during the civil war, and was deprived of his preferment in the Church after the victory of the Parliament. On account of the loss which Hammond sustained on this occasion, he has the honour of being designated, in the cant of that new brood of Oxonian sectaries who unite the worst parts of the Jesuit to the worst parts of the Orangeman, as Hammond, Presbyterian, Doctor, and Confessor.

William Temple, Sir John's eldest son, was born in London in the year 1628.

He received his early education under his maternal uncle, was subsequently sent to school at Bishop Stortford, and, at seven-

Birth and education.

teen, began to reside at Emmanuel College, Cambridge, where the celebrated Cudworth was his tutor. The times were not favourable to study. The Civil War disturbed even the quiet cloisters and bowling-greens of Cambridge, produced violent revolutions in the government and discipline of the colleges, and unsettled the minds of the students. Temple forgot at Emmanuel all the little Greek which he had brought from Bishop-Stortford, and never retrieved the loss; a circumstance which would hardly be worth noticing but for the almost incredible fact that, fifty years later, he was so absurd as to set up his own authority against that of Bentley on questions of Greek history and philology. He made no proficiency either in the old philosophy which still lingered in the schools of Cambridge, or in the new philosophy of which Lord Bacon was the founder. But to the end of his life he continued to speak of the former with ignorant admiration, and of the latter with equally ignorant contempt.

After residing at Cambridge two years, he departed without taking a degree, and set out upon his travels. He seems to have been then a lively, agreeable young man of fashion, not

by any means deeply read, but versed in all the

Leaves Cambridge.

superficial accomplishments of a gentleman, and acceptable in all polite societies. In politics he professed himself a Royalist. His opinions on religious subjects seem to have been such as might be expected from a young man of quick parts, who had received a rambling education, who had not thought deeply, who had been disgusted by the morose austerity of the Puritans, and who, surrounded from childhood by the hubbub of conflicting sects, might easily learn to feel an impartial contempt for them all.

On his road to France he fell in with the son and daughter of Sir Peter Osborne. Sir Peter was governor of Guernsey for the King, and the young people were, like their father, warm for the royal cause. At an

Sir Peter Osborne's children.

inn where they stopped in the Isle of Wight, the brother amused himself with inscribing on the windows his opinion of the ruling powers. For this instance of

malignancy the whole party were arrested, and brought before the governor. The sister, trusting to the tenderness which, even in those troubled times, scarcely any gentleman of any party ever failed to show where a woman was concerned, took the crime on herself, and was immediately set at liberty with her fellow-travellers.

This incident, as was natural, made a deep impression on Temple. He was only twenty.

Dorothy Osborne.

twenty-one. She is said to have been handsome; and there remains abundant proof that she possessed an ample share of the dexterity, the vivacity, and the tenderness of her sex. Temple soon became, in the phrase of that time, her servant, and she returned his regard. But difficulties, as great as ever expanded a novel to the fifth volume, opposed their wishes. When the courtship commenced, the father of the hero was sitting in the Long Parliament; the father of the heroine was holding Guernsey for King Charles. Even when the war ended, and Sir Peter Osborne returned to his seat at Chicksands, the prospects of the lovers were scarcely less gloomy. Sir John Temple had a more advantageous alliance in view for his son. Dorothy Osborne was in the meantime besieged by as many suitors as were drawn to Belmont by the fame of Portia. The most distinguished on the list was Henry Cromwell. Destitute of the capacity, the energy, the magnanimity of his illustrious father, destitute also of the meek and placid virtues of his elder brother, this young man was perhaps a more formidable rival in love than either of them would have been. Mrs. Hutchinson, speaking the sentiments of the grave and aged, describes him as an "insolent foole," and a "debauched ungodly cavalier." These expressions probably mean that he was one who, amongst young and dissipated people, would pass for a fine gentleman. Dorothy was fond of dogs of larger and more formidable breed than those which lie on modern hearth-rugs; and Henry Cromwell promised that the highest functionaries at Dublin should be set to work to procure her a fine Irish greyhound. She seems to have felt his attentions as very flattering, though his father was then only Lord-General, and not yet Protector. Love, however, triumphed over ambition, and the young

lady appears never to have regretted her decision; though, in a letter written just at the time when all England was ringing with the news of the violent dissolution of the Long Parliament, she could not refrain from reminding Temple, with pardonable vanity, "how great she might have been if she had been so wise as to have taken hold of the offer of H. C."

Nor was it only the influence of rivals that Temple had to dread. The relations of his mistress regarded him with personal dislike, and spoke of him as an unprincipled adventurer, without honour or religion, ready to render service to any party for the sake of preferment. This is, indeed, a very distorted view of Temple's character. Yet

a character, even in the most distorted view taken of it by the most angry and prejudiced minds, generally retains something of its outline. No caricaturist ever represented Mr. Pitt as a Falstaff, or Mr. Fox as a skeleton; nor did any libeller ever impute parsimony to Sheridan, or profusion to Marlborough. It must be allowed that the turn of mind which the eulogists of Temple have dignified with the appellation of philosophical indifference, and which, however becoming it may be in an old and experienced statesman, has a somewhat ungraceful appearance in youth, might easily appear shocking to a family who were ready to fight or to suffer martyrdom for their exiled King and their persecuted Church. The poor girl was exceedingly hurt and irritated by these imputations on her lover, defended him warmly behind his back, and addressed to himself some very tender and anxious admonitions, mingled with assurances of her confidence in his honour and virtue. On one occasion she was most highly provoked by the way in which one of her brothers spoke of Temple: "We talked ourselves weary," she says;—"he renounced me, and I defied him."

Nearly seven years did this arduous wooing continue. We are not accurately informed respecting Temple's movements during that time. But he seems to have led a rambling life, sometimes on the Continent, sometimes in Ireland, sometimes in London. He made himself master of the French and Spanish languages, and amused himself by writing Essays and Romances—an employment which at least served the

The Osbornes' dislike of Temple.

An arduous wooing.

purpose of forming his style. The specimen which Mr. Courtenay has preserved of these early compositions is by no means contemptible. Indeed, there is one passage on *Like and Dislike* which could have been produced only by a mind habituated carefully to reflect on its own operations, and which reminds us of the best things in Montaigne.

He appears to have kept up a very active correspondence with his mistress.

Correspondence.

His letters are lost, but hers have been preserved; and many of them appear

in these volumes. Mr. Courtenay expresses some doubt whether his readers will think him justified in inserting so large a number of these epistles. We only wish that there were twice as many. Very little indeed of the diplomatic correspondence of that generation is so well worth reading. There is a vile phrase of, which bad historians are exceeding fond—"the dignity of history." One writer is in possession of some anecdotes which would illustrate most strikingly the operation of the Mississippi scheme on the manners and morals of the Parisians. But he suppresses those anecdotes, because they are too low for the dignity of history. Another is strongly tempted to mention some facts indicating the horrible state of the prisons of England two hundred years ago. But he hardly thinks that the sufferings of a dozen felons pigging together on bare bricks in a hole fifteen feet square would form a subject suited to the dignity of history. Another, from respect for the dignity of history, publishes an account of the reign of George the Second, without ever mentioning Whitfield's preaching in Moorfields. How should a writer, who can talk about senates, and congresses of sovereigns, and pragmatic sanctions, and ravelines, and counterscarps, and battles where ten thousand men are killed, and six thousand men, with fifty stand of colours and eighty guns taken, stoop to the Stock-Exchange, to Newgate, to the theatre, to the tabernacle?

Tragedy has its dignity as well as history; and how much the tragic art has owed to that dignity any man may judge who will compare the majestic Alexandrines in which the "Seigneur Oreste" and "Madame Andromaque" utter their complaints, with the chattering of the fool in "Lear," and of the nurse in "Romeo and Juliet."

That a historian should not record

trifles, that he should confine himself to what is important, is perfectly true. But many writers seem never to have considered on what the historical importance of an event depends. They seem not to be aware that the importance of a fact, when that fact is considered with reference to its immediate effects, and the importance of the same fact, when that fact is considered as part of the materials for the construction of a science, are two very different things. The quantity of good or evil which a transaction produces is by no means necessarily proportioned to the quantity of light which that transaction affords as to the way in which good or evil may hereafter be produced. The poisoning of an emperor is in one sense a far more serious matter than the poisoning of a rat. But the poisoning of a rat may be an era in chemistry; and an emperor may be poisoned by such ordinary means, and with such ordinary symptoms, that no scientific journal would notice the occurrence. An action for a hundred thousand pounds is in one sense a more momentous affair than an action for fifty pounds. But it by no means follows that the learned gentlemen who report the proceedings of the courts of law ought to give a fuller account of an action for a hundred thousand pounds, than of an action for fifty pounds. For a cause, in which a large sum is at stake, may be important only to the particular plaintiff and the particular defendant. A cause, on the other hand, in which a small sum is at stake, may establish some great principle interesting to half the families in the kingdom. The case is exactly the same with that class of subjects of which historians treat. To an Athenian, in the time of the Peloponnesian war, the result of the battle of Delium was far more important than the fate of the comedy of the "Knights." But to us the fact that the comedy of the "Knights" was brought on the Athenian stage with success is far more important than the fact that the Athenian phalanx gave way at Delium. Neither the one event nor the other has now any intrinsic importance. We are in no danger of being speared by the Thebans. We are not quizzed in the "Knights." To us, the importance of both events consists in the value of the general truth which is to be learnt from them. What general truth do we learn

from the accounts which have come down to us of the battle of Delium? Very little more than this, that when two armies fight it is not improbable that one of them will be very soundly beaten—a truth which it would not, we apprehend, be difficult to establish, even if all memory of the battle of Delium were lost among men. But a man who becomes acquainted with the comedy of the “Knights,” and with the history of that comedy, at once feels his mind enlarged. Society is presented to him under a new aspect. He may have read and travelled much. He may have visited all the countries of Europe, and the civilized nations of the East. He may have observed the manners of many barbarous races. But here is something altogether different from every thing which he has seen either among polished men, or among savages. Here is a community politically, intellectually, and morally unlike any other community of which he has the means of forming an opinion. This is the really precious part of history,—the corn which some threshers carefully sever from the chaff, for the purpose of gathering the chaff into the garner, and flinging the corn into the fire.

Thinking thus, we are glad to learn so much, and would willingly learn more, about the loves of Sir William and his mistress. In the seventeenth century, to be sure, Louis the Fourteenth was a much more important person than Temple’s sweetheart. But death and time equalize all things. Neither the great King, nor the beauty of Bedfordshire—neither the gorgeous paradise of Marli nor Mistress Osborne’s favourite walk “in the common that lay hard by the house, where a great many young wenches used to keep sheep and cows and sit in the shade singing of ballads,”—is any thing to us. Louis and Dorothy are alike dust. A cotton-mill stands on the ruins of Marli, and the Osbornes have ceased to dwell under the ancient roof of Chicksands. But of that information, for the sake of which alone it is worth while to study remote events, we find so much in the love-letters which Mr. Courtenay has published, that we would gladly purchase equally interesting billets with ten times their weight in state-papers taken at random. To us surely it is as useful to know how the young ladies of England employed them-

selves a hundred and eighty years ago,—how far their minds were cultivated, what were their favourite studies, what degree of liberty was allowed to them, and what use they made of that liberty, what accomplishments they most valued in men, and what proofs of tenderness delicacy permitted them to give to favoured suitors,—as to know all about the seizure of Franche Comté and the treaty of Nimeguen. The mutual relations of the two sexes seem to us to be at least as important as the mutual relations of any two governments in the world; and a series of letters written by a virtuous, amiable, and sensible girl, and intended for the eye of her lover alone, can scarcely fail to throw some light on the relations of the sexes; whereas it is perfectly possible, as all who have made any historical researches can attest, to read bale after bale of despatches and protocols without catching one glimpse of light about the relations of governments.

Mr. Courtenay proclaims that he is one of Dorothy Osborne’s devoted servants, and expresses a hope that the publication of her letters will add to the number. We must declare ourselves his rivals. She really seems to have been a very charming young woman—modest, generous, affectionate, intelligent, and sprightly;—a Royalist, as was to be expected from her connections, without any of that political asperity which is as unwomanly as a long beard,—religious, and occasionally gliding into a very pretty and endearing sort of preaching, yet not too good to partake of such diversions as London afforded under the melancholy rule of the Puritans, or to giggle a little at a ridiculous sermon from a divine who was thought to be one of the great lights of the Assembly at Westminster,—with a little turn for coquetry, which was yet perfectly compatible with warm and disinterested attachment, and a little turn for satire, which yet seldom passed the bounds of good nature. She loved reading; but her studies were not those of Elizabeth and Lady Jane Grey. She read the verses of Cowley and Lord Broghill, French Memoirs recommended by her lover, and the Travels of Fernando Mendez Pinto. But her favourite books were those ponderous French Romances which modern readers know chiefly from the pleasant satire of Charlotte Lennox. She could not, however, help laughing at the vile English into which they were

Qualities of
Dorothy
Osborne.

translated. Her own style is very agreeable; nor are her letters at all the worse for some passages in which raillery and tenderness are mixed in a very engaging namby-pamby.

When at last the constancy of the lovers had triumphed over all the obstacles which kinsmen and rivals could oppose to their union, a yet more serious calamity befell them. Poor Mistress Osborne fell ill of the small-pox, and though she escaped with life, lost all her beauty. To this most severe trial the affection and honour of the lovers of that age was not unfrequently subjected. Our readers probably remember what Mrs. Hutchinson tells of herself. The lofty Cornelia-like spirit of the aged matron seems to melt into a long forgotten softness when she relates how her beloved Colonel "married her as soon as she was able to quit the chamber, when the priest and all that saw her were affrighted to look on her. But God," she adds, with a not ungraceful vanity, "recompensed his justice and constancy by restoring her as well as before." Temple showed on this occasion the same "justice and constancy" which did so much honour to Colonel Hutchinson. The date of the marriage is not exactly known. But Mr. Courtenay supposes it to have taken place about the end of the year 1654. From this time we lose sight of Dorothy, and are reduced to form our opinion of the terms on which she and her husband were from very slight indications which may easily mislead us.

Temple soon went to Ireland and resided with his father, partly in Dublin, partly in the county of Carlow. Ireland was probably then a more agreeable residence for the higher classes, as compared with England, than it has ever been before or since. In no part of the empire were the superiority of Cromwell's abilities and the force of his character so signally displayed. He had not the power, and probably had not the inclination to govern that island in the best way. The rebellion of the aboriginal race had excited in England a strong religious and national aversion to them; nor is there any reason to believe that the Protector was so far beyond his age as to be free from the prevailing sentiment. He had vanquished them: he knew that they were in his power; and he regarded them as a band of malefactors and idolaters, who were mercifully treated if they were not smitten

with the edge of the sword. On those who resisted he had made war as the Hebrews made war on the Canaanites. Drogheda was as Jericho; and Wexford as Ai. To the remains of the old population the conqueror granted a peace, such as that which Joshua granted to the Gibeonites. He made them hewers of wood and drawers of water. But, good or bad, he could not be otherwise than great. Under favourable circumstances, Ireland would have found in him a most just and beneficent ruler. She found in him a tyrant;—not a small, teasing tyrant, such as those who have so long been her curse and her shame,—but one of those awful tyrants who, at long intervals, seem to be sent on earth, like avenging angels, with some high commission of destruction and renovation. He was no man of half measures, of mean affronts and ungracious concessions. His Protestant ascendancy was not an ascendancy of ribbands, and fiddles, and statutes, and processions. He would never have dreamed of abolishing penal laws against the Irish Catholics, and withholding from them the elective franchise—of giving them the elective franchise and excluding them from Parliament—of admitting them to Parliament, and refusing to them a full and equal participation in all the blessings of society and government. The thing most alien from his clear intellect and his commanding spirit was petty persecution. He knew how to tolerate, and he knew how to destroy. His administration in Ireland was an administration on what are now called Orange principles,—followed out most ably, most steadily, most undauntedly, most unrelentingly, to every extreme consequence to which those principles lead; and it would, if continued, inevitably have produced the effect which he contemplated,—an entire decomposition and reconstruction of society. He had a great and definite object in view,—to make Ireland thoroughly English,—to make it another Yorkshire or Norfolk. Thinly peopled as Ireland then was, this end was not unattainable; and there is every reason to believe that if his policy had been followed during fifty years this end would have been attained. Instead of an emigration, such as we now see from Ireland to England, there was, under his government, a constant and large emigration from England to Ireland. This tide of population ran almost as

strongly as that which now runs from Massachusetts and Connecticut to the states behind the Ohio. The native race was driven back before the advancing van of the Anglo-Saxon population, as the American Indians or the tribes of Southern Africa are now driven back before the white settlers. Those fearful phenomena which have almost invariably attended the planting of civilized colonies in uncivilized countries, and which had been known to the nations of Europe only by distant and questionable rumour, were now publicly exhibited in their sight. The words "extirpation," "eradication," were often in the mouths of the English back-settlers of Leinster and Munster—cruel words—yet, in their cruelty, containing more mercy than much softer expressions which have since been sanctioned by universities, and cheered by Parliaments. For it is in truth more merciful to extirpate a hundred thousand people at once, and to fill the void with a well-governed population, than to misgovern millions through a long succession of generations. We can much more easily pardon tremendous severities inflicted for a great object, than an endless series of paltry vexations and oppressions inflicted for no rational object at all.

Ireland was fast becoming English. Civilization and wealth were making

Progress of rapid progress in almost every part of the island.

The effects of that iron despotism are described to us by a hostile witness in very remarkable language. "Which is more wonderful," says Lord Clarendon, "all this was done and settled within little more than two years, to that degree of perfection that there were many buildings raised for beauty as well as use, orderly and regular plantations of trees, and fences and inclosures raised throughout the kingdom, purchases made by one from another at very valuable rates, and jointures made upon marriages, and all other conveyances and settlements executed, as in a kingdom at peace within itself, and where no doubt could be made of the validity of titles."

All Temple's feelings about Irish questions were those of a colonist, and a

Inaction of member of the dominant Temple. caste. He troubled himself as little about the

welfare of the remains of the old Celtic population, as an English farmer on the Swan river troubles himself about the New Hollanders, or a Dutch boor at the

Cape about the Caffres. The years which he passed in Ireland, while the Cromwellian system was in full operation, he always described as "years of great satisfaction." Farming, gardening, county business, and studies rather entertaining than profound, occupied his time. In politics he took no part, and many years after he attributed this inaction to his love of the ancient constitution which, he said, "would not suffer him to enter into public affairs till the way was plain for the King's happy restoration." It does not appear, indeed, that any offer of employment was made to him. If he really did refuse any preferment, we may, without much breach of charity, attribute the refusal rather to the caution which, during his whole life, prevented him from running any risk, than to the fervour of his loyalty.

In 1660 he made his first appearance in public life. He sat in the Convention which, in the midst of the general

First public appearance.

confusion that preceded the Restoration, was summoned by the chiefs of the army of Ireland to meet in Dublin. After the King's return an Irish Parliament was regularly convoked, in which Temple represented the county of Carlow. The details of his conduct in this situation are not known to us. But we are told in general terms, and can easily believe, that he showed great moderation, and great aptitude for business. It is probable that he also distinguished himself in debate; for many years afterwards he remarked that "his friends in Ireland used to think that if he had any talent at all, it lay in that way."

In May 1663 the Irish Parliament was prorogued, and Temple repaired to England with his wife. His income amounted to about five hundred pounds a-year; a sum which was then sufficient

Temple's income.

for the wants of a family mixing in fashionable circles. He passed two years in London, where he seems to have led that easy, lounging life which was best suited to his temper.

He was not, however, unmindful of his interest. He had brought with him letters of introduction from the Duke of Ormond, then Lord-Lieutenant of Ireland, to Clarendon, and to Henry Bennet, Lord Arlington, who was Secretary of State. Clarendon was at the head of affairs. But his power was visibly declining, and was certain to decline more

and more every day. An observer much less discerning than Temple might easily perceive that the Chancellor was a man who belonged to a bygone world;—a representative of a past age, of obsolete modes of thinking, of unfashionable vices, and of more unfashionable virtues. His long exile had made him a stranger in the country of his birth. His mind, heated by conflict and by personal suffering, was far more set against popular and tolerant courses than it had been at the time of the breaking out of the Civil War. He pined for the decorous tyranny of the old Whitehall; for the days of that sainted King who deprived his people of their money and their ears, but let their wives and daughters alone; and could scarcely reconcile himself to a Court with a mistress and without a Star Chamber. By taking this course he made himself every day more odious, both to the sovereign, who loved pleasure much more than prerogative, and to the people, who dreaded royal prerogatives much more than royal pleasures; and was at last more detested by the Court than any chief of the Opposition, and more detested by the Parliament than any pander of the Court.

Temple, whose great maxim was to offend no party, was not likely to cling to the falling fortunes of a minister, the study of whose life was to offend all parties.

Arlington, whose influence was gradually rising as that of Clarendon diminished, was the most useful patron to whom a young adventurer could attach himself. This statesman, without virtue, wisdom, or strength of mind, had raised himself to greatness by superficial qualities, and was the mere creature of the time, the circumstances, and the company. The dignified reserve of manners which he had acquired during a residence in Spain provoked the ridicule of those who considered the usages of the French Court as the only standard of good-breeding, but served to impress the crowd with a favourable opinion of his sagacity and gravity. In situations where the solemnity of the Escorial would have been out of place, he threw it aside without difficulty, and conversed with great humour and vivacity. While the multitude were talking of "Bennet's grave looks," * his mirth made

* "Bennet's grave looks were a pretence," is a line in one of the best political poems of that age.

his presence always welcome in the royal closet. While, in the antechamber, Buckingham was mimicking the pompous Castilian strut of the Secretary, for the diversion of Mistress Stuart, this stately Don was ridiculing Clarendon's sober counsels to the King within, till his Majesty cried with laughter, and the Chancellor with vexation. There perhaps never was a man whose outward demeanour made such different impressions on different people. Count Hamilton, for example, describes him as a stupid formalist, who had been made Secretary solely on account of his mysterious and important looks. Clarendon, on the other hand, represents him as a man whose "best faculty was raillery," and who was "for his pleasant and agreeable humour acceptable unto the King." The truth seems to be, that, destitute as he was of all the higher qualifications of a minister, he had a wonderful talent for becoming, in outward semblance, all things to all men. He had two aspects: a busy and serious one for the public, whom he wished to awe into respect; and a gay one for Charles, who thought that the greatest service which could be rendered to a prince was to amuse him. Yet both these were masks, which he laid aside when they had served their turn. Long after, when he had retired to his deer-park and fish-ponds in Suffolk, and had no motive to act the part either of the hidalgo or of the buffoon, Evelyn, who was neither an unpractised nor an undiscerning judge, conversed much with him, and pronounced him to be a man of singularly polished manners and of great colloquial powers.

Clarendon, proud and imperious by nature, soured by age and disease, and relying on his great talents and services, sought out ^{Different lines} no new allies. He seems ^{of conduct.} to have taken a sort of morose pleasure in slighting and provoking all the rising talent of the kingdom. His connections were almost entirely confined to the small circle, every day becoming smaller, of old cavaliers who had been friends of his youth, or companions of his exile. Arlington, on the other hand, beat up everywhere for recruits. No man had a greater personal following, and no man exerted himself more to serve his adherents. It was a kind of habit with him to push up his dependents to his own level; and then to complain bitterly of their ingratitude because they did not choose to be

his dependents any longer. It was thus that he quarrelled with two successive Treasurers, Clifford and Danby. To Arlington Temple attached himself, and was not sparing of warm professions of affection, or even, we grieve to say, of gross and almost profane adulation. In no long time he obtained his reward.

England was in a very different situation with respect to foreign powers from that which she had occupied during the splendid administration of the Protector.

She was engaged in war with the United Provinces, then governed with almost regal power by the Grand Pensionary, John De Witt; and though no war had ever cost the kingdom so much, none had ever been more feebly and meanly conducted. France had espoused the interest of the States-General. Denmark seemed likely to take the same side. Spain, indignant at the close political and matrimonial alliance which Charles had formed with the House of Braganza, was not disposed to lend him any assistance. The Great Plague of London had suspended trade, had scattered the ministers and nobles, had paralyzed every department of the public service, and had increased the gloomy discontent which misgovernment had begun to excite throughout the nation. One continental ally England possessed—the Bishop of Munster; a restless and ambitious prelate, bred a soldier, and still a soldier in all his tastes and passions. He hated the Dutch, who had interfered in the affairs of his see, and declared himself willing to risk his little dominions for the chance of revenge. He sent accordingly a strange kind of ambassador to London—a Benedictine monk, who spoke bad English, and looked, says Lord Clarendon, “like a carter.” This person brought a letter from the Bishop, offering to make an attack by land on the Dutch territory. The English Ministers eagerly caught at the proposal, and promised a subsidy of 500,000 rix-dollars to their new ally. It

was determined to send an English agent to Munster; and Arlington, to

whose department the business belonged, fixed on Temple for this post.

Temple accepted the commission, and acquitted himself to the satisfaction of his employers, though the whole plan ended in nothing; and the Bishop, after pocketing an instalment of his

subsidy, made haste to conclude a separate peace. Temple, at a later period, looked back with no great satisfaction to this part of his life; and excused himself for undertaking a negotiation from which little good could result, by saying that he was then young and very new in business. In truth, he could hardly have been placed in a situation where the eminent diplomatic talents which he possessed could have appeared to less advantage. He was ignorant of the German language, and did not easily accommodate himself to the manners of the people. He could not bear much wine; and none but a hard drinker had any chances of success in Westphalian society. Under all these disadvantages, however, he gave so much satisfaction that he was created a baronet, and appointed resident at the viceregal court of Brussels.

Brussels suited Temple far better than the palaces of the boar-hunting and wine-bibbing princes of Germany. He now occupied the most important post of observation in which a diplomatist could be stationed. He was placed in the territory of a great neutral power, between the territories of the two great powers which were at war with England. From this excellent school he soon came forth the most accomplished negotiator of his age.

In the meantime the Government of Charles had suffered a succession of humiliating disasters. The extravagance of the Court had dissipated all the means which Parliament had supplied for the purpose of carrying on offensive hostilities. It was determined to wage only a defensive war; and even for defensive war the vast resources of England, managed by triflers and public robbers, were found insufficient. The Dutch insulted the British coasts, sailed up the Thames, took Sheerness, and carried their ravages to Chatham. The blaze of the ships burning in the river was seen in London; it was rumoured that a foreign army had landed at Gravesend; and military men seriously proposed to abandon the Tower. To such a depth of infamy had maladministration reduced that proud and victorious nation, which a few years before had dictated its pleasure to Mazarin, to the States-General, and to the Vatican. Humbled by the events of the war, and dreading the just anger of Parliament, the English

Resident at
Brussels.

English
Ministry
humbled.

Ministry hastened to huddle up a peace with France and Holland at Breda.

But a new scene was about to open. It had already been for some time apparent to discerning observers, that England and Holland were threatened by a common danger, much more formidable than any which they had reason to apprehend from each other. The old enemy of their independence and of their religion was no longer to be dreaded. The sceptre had passed away from Spain. That mighty empire, on which the sun never set, which had crushed the liberties of Italy and Germany, which had occupied Paris with its armies, and covered the British seas with its sails, was at the mercy of every spoiler; and Europe saw with dismay the rapid growth of a new and more formidable power. Men looked

to Spain and saw only weakness disguised and increased by pride,—dominions of vast bulk and little strength, tempting, wieldy, and defenceless,—an empty treasury,—a haughty, sullen, and torpid nation,—a child on the throne,—factions in the council,—ministers who served only themselves, and soldiers who were terrible only to their countrymen. Men looked to France, and saw a large and compact territory,—a rich soil,—a central situation,—a bold, alert, and ingenious people,—large revenues,—numerous and disciplined troops,—an active and ambitious prince, in the flower of his age, surrounded by generals of unrivalled skill. The projects of Louis could be counteracted only by ability, vigour, and union on the part of his neighbours. Ability and vigour had hitherto been found in the counsels of Holland alone, and of union there was no appearance in Europe. The question of Portuguese independence separated England from Spain. Old grudges, recent hostilities, maritime pretensions, commercial competition separated England as widely from the United Provinces.

The great object of Louis, from the beginning to the end of his reign, was the acquisition of those large and valuable provinces of the

Conquests of Louis XIV. Spanish monarchy which lay contiguous to the eastern frontier of France. Already, before the conclusion of the treaty of Breda, he had invaded those provinces. He now pushed on his conquests with scarcely any resistance. Fortress after fortress was taken. Brussels itself was in danger;

and Temple thought it wise to send his wife and children to England. But his sister, Lady Giffard, who had been some time his inmate, and who seems to have been a more important personage in his family than his wife, still remained with him.

De Witt saw the progress of the French arms with painful anxiety. But it was not in the power of Holland alone to save Flanders; and the difficulty of forming an extensive coalition for that purpose appeared almost insuperable. Louis, indeed, affected moderation. He declared himself willing to agree to a compromise with Spain. But these offers were undoubtedly mere professions, intended to quiet the apprehensions of the neighbouring powers; and, as his position became every day more and more advantageous, it was to be expected that he would rise in his demands.

Such was the state of affairs when Temple obtained from the English Ministry permission to make a tour in Holland incognito. In company with Lady Giffard he arrived at the Hague. He

De Witt and Temple.

was not charged with any public commission, but he availed himself of the opportunity of introducing himself to De Witt. "My only business, sir," he said, "is to see the things which are most considerable in your country, and I should execute my design very imperfectly if I went away without seeing you." De Witt, who from report had formed a high opinion of Temple, was pleased by the compliment, and replied with a frankness and cordiality which at once led to intimacy. The two statesmen talked calmly over the causes which had estranged England from Holland, congratulated each other on the peace, and then began to discuss the new dangers which menaced Europe. Temple, who had no authority to say anything on behalf of the English Government, expressed himself very guardedly. De Witt, who was himself the Dutch Government, had no reason to be reserved. He openly declared that his wish was to see a general coalition formed for the preservation of Flanders. His simplicity and openness amazed Temple, who had been accustomed to the affected solemnity of his patron, the Secretary, and to the eternal doublings and evasions which passed for great feats of statesmanship among the Spanish politicians at Brussels. "Whoever," he wrote to Arlington, "deals with M. De Witt must

go the same plain way that he pretends to in his negotiations, without refining or colouring, or offering shadow for substance." He was scarcely less struck by the modest dwelling and frugal table of the first citizen of the richest state in the world. While Clarendon was amazing London with a dwelling more sumptuous than the palace of his master, while Arlington was lavishing his ill-gotten wealth on the decoys and orange-gardens and interminable conservatories of Euston, —the great statesman who had frustrated all their plans of conquest, and the roar of whose guns they had heard with terror even in the galleries of Whitehall, kept only a single servant, walked about the streets in the plainest garb, and never used a coach except for visits of ceremony.

Temple sent a full account of his interview with De Witt to Arlington, who, in consequence of the fall of the Chancellor, now shared with the Duke of Buckingham the principal direction of affairs. Arlington showed no disposition to meet the advances of the Dutch minister. Indeed, as was amply proved a few years later, both he and his master were perfectly willing to purchase the means of misgoverning England by giving up, not only Flanders, but the whole continent, to France. Temple, who distinctly saw that a moment had arrived at which it was possible to reconcile his country with Holland,—to reconcile Charles with the Parliament,—to bridle the power of Louis,—to efface the shame of the late ignominious war,—to restore England to the same place in Europe which she had occupied under Cromwell, became more and more urgent in his representations.

Urgent representations.

Arlington's replies were for some time couched in cold and ambiguous terms.

But the events which followed the meeting of the Parliament, in the autumn of 1667 appear to have produced an entire change in his views. The discontent of the nation was deep and general. The administration was attacked in all its parts. The King and the ministers laboured, not unsuccessfully, to throw on Clarendon the blame of past miscarriages; but though the Commons were resolved that the late Chancellor should be the first victim, it was by no means clear that he would be the last. The Secretary was personally attacked with great bitterness in the course of the debates. One of the resolutions of the

Lower House against Clarendon could be understood only as a censure of the foreign policy of the Government, as too favourable to France. To these events chiefly we are inclined to attribute the change which at this crisis took place in the measures of England. The Ministry seem to have felt that, if they wished to derive any advantage from Clarendon's downfall, it was necessary for them to abandon what was supposed to be Clarendon's system; and by some splendid and popular measure to win the confidence of the nation. Accordingly, in December 1667, Temple received a despatch containing instructions of the highest importance. The plan which he had so strongly recommended was approved; and he was directed to visit De Witt as speedily as possible, and to ascertain whether the States were willing to enter into an offensive and defensive league with England against the projects of France. Temple, accompanied by his sister, instantly set out for the Hague, and laid the propositions of the English Government before the Grand Pensionary. The Dutch statesman answered with his characteristic straightforwardness, that he was fully ready to agree to a defensive alliance, but that it was the fundamental principle of the foreign policy of the States, to make no offensive league under any circumstances whatsoever. With this answer Temple hastened from the Hague to London, had an audience of the King, related what had passed between himself and De Witt, exerted himself to remove the unfavourable opinion which had been conceived of the Grand Pensionary at the English court, and had the satisfaction of succeeding in all his objects. On the evening of the 1st January, 1668, a council was held, at which Charles declared his resolution to unite with the Dutch on their own terms. Temple and his indefatigable sister immediately sailed again for the Hague, and, after weathering a violent storm in which they were very nearly lost, arrived in safety at the place of their destination.

Succeeds in his objects.

On this occasion, as on every other, the dealings between Temple and De Witt were singularly fair and open. When they met, Temple began by recapitulating what had passed at their last interview. De Witt, who was as little given to lying with his face as with his

Fair and open dealings.

tongue, marked his assent by his looks while the recapitulation proceeded; and when it was concluded, answered that Temple's memory was perfectly correct, and thanked him for proceeding in so exact and sincere a manner. Temple then informed the Grand Pensionary that the King of England had determined to close with the proposal of a defensive alliance. De Witt had not expected so speedy a resolution; and his countenance indicated surprise as well as pleasure. But he did not retract; and it was speedily arranged that England and Holland should unite for the purpose of compelling Louis to abide by the compromise which he had formerly offered. The next object of the two statesmen was to induce another Government to become a party to their league. The victories of Gustavus and Torstenson, and the political talents of Oxenstiern, had obtained for Sweden a consideration in Europe disproportioned to her real power. The princes of Northern Germany stood in great awe of her. And De Witt and Temple agreed that if she could be induced to accede to the league, "it would be too strong a bar for France to venture on." Temple went that same evening to Count Dona, the Swedish Minister at the Hague; took a seat in the most unceremonious manner; and, with that air of frankness and good-will by which he often succeeded in rendering his diplomatic overtures acceptable, explained the scheme which was in agitation. Dona was greatly pleased and flattered. He had not powers which would authorize him to conclude a treaty of such importance. But he strongly advised Temple and De Witt to do their part without delay, and seemed confident that Sweden would accede. The ordinary course of public business in Holland was too slow for the present emergency; and De Witt appeared to have some scruples about breaking through the established forms. But the urgency and dexterity of Temple prevailed. The States-General took the responsibility of executing the treaty with a celerity unprecedented in the annals of the federation, and indeed inconsistent with its fundamental laws. The state of public feeling was, however, such in all the provinces, that this irregularity was not merely pardoned but applauded. When the instrument had been formally signed, the Dutch Commissioners embraced the English Plenipotentiary with the warmest expressions

of kindness and confidence. "At Breda," exclaimed Temple, "we embraced as friends—here as brothers."

This memorable negotiation occupied only five days. De Witt complimented Temple in high terms on having effected in so short a time what must, under other management, have been the work of months; and Temple, in his despatches, spoke in equally high terms of De Witt. "I must add these words, to do M. De Witt right, that I found him as plain, as direct and square in the course of this business as any man could be, though often stiff in points where he thought any advantage could accrue to his country; and have all the reason in the world to be satisfied with him; and for his industry, no man had ever more, I am sure. For these five days at least, neither of us spent any idle hours, neither day nor night."

Sweden willingly acceded to the league, which is known in history by the name of the Triple Alliance; and after some signs of ill-humour on the part of France, a general pacification was the result.

The Triple Alliance may be viewed in two lights—as a measure of foreign policy, and as a measure of domestic policy—and under both aspects it seems to us deserving of all the praise which has been bestowed upon it.

Dr. Lingard, who is undoubtedly a very able and well informed writer, but whose great fundamental rule of judging seems to be, that the popular opinion on a historical question cannot possibly be correct, speaks very slightly of this celebrated treaty; and Mr. Courtenay, who by no means regards Temple with that profound veneration which is generally found in biographers, has conceded, in our opinion, far too much to Dr. Lingard.

The reasoning of Dr. Lingard is simply this,—The Triple Alliance only compelled Louis to make peace on the terms on which, before the alliance was formed, he had offered to make peace. How can it then be said that this alliance arrested his career, and preserved Europe from his ambition? Now, this reasoning is evidently of no force at all, except on the supposition that Louis would have held himself bound by his former offers, if the alliance had not been formed; and, if Dr. Lingard thinks this a reasonable

Compliments.

The Triple Alliance.

Dr. Lingard's reasoning.

supposition, we should be disposed to say to him, in the words of that great politician Mrs. Western,—“Indeed, brother, you would make a fine plenipo, to negotiate with the French. They would soon persuade you that they take towns out of mere defensive principles.” Our own impression is, that Louis made his offer only in order to avert some such measure as the Triple Alliance, and adhered to it only in consequence of that alliance. He had refused to consent to an armistice. He had made all his arrangements for a winter campaign. In the very week in which Temple and the States concluded their agreement at the Hague, Franche Comté was attacked by the French armies; and in three weeks the whole province was conquered. This prey Louis was compelled to disgorge. And what compelled him? Did the object seem to him small or contemptible? On the contrary, the annexation of Franche Comté to his kingdom was one of the favourite projects of his life. Was he withheld by regard for his word? Did he, who never in any other transaction of his reign showed the smallest respect for the most solemn obligations of public faith,—who violated the Treaty of the Pyrenees, who violated the Treaty of Aix, who violated the Treaty of Nimeguen, who violated the Partition Treaty, who violated the Treaty of Utrecht,—feel himself restrained by his word on this single occasion? Can any person who is acquainted with his character, and with his whole policy, doubt, that if the neighbouring powers would have looked quietly on, he would instantly have risen in his demands? How, then, stands the case? He wished to keep Franche Comté. It was not from regard to his word that he ceded Franche Comté. Why, then, did he cede Franche Comté? We answer as all Europe answered at the time, from fear of the Triple Alliance.

But grant that Louis was not really stopped in his progress by this famous league, still it is certain that the world then, and long after believed that he was so stopped; and this was the prevailing impression in France as well as in other countries. Temple, therefore, at the very least, succeeded in raising the credit of his country, and lowering the credit of a rival power. Here there is no room for controversy. No grubbing among old state papers will ever bring to light

any document which will shake these facts—that Europe believed the ambition of France to have been curbed by the three powers;—that England, a few months before, the least among the nations, forced to abandon her own seas, unable to defend the mouths of her own rivers, regained almost as high a place in the estimation of her neighbours as she had held in the times of Elizabeth and Oliver;—and that all this change of opinion was produced in five days by wise and resolute counsels, without the firing of a single gun. That the Triple Alliance effected this will hardly be disputed; and if it effected nothing else, it must still be regarded as a masterpiece of diplomacy.

Considered as a measure of domestic policy, this treaty seems to be equally deserving of approbation. It did much to allay discontents, to reconcile the sovereign with a people who had, under his wretched administration, become ashamed of him, and of themselves. It was a kind of pledge for internal good government. The foreign relations of the kingdom had at that time the closest connection with our domestic policy. From the Restoration to the Accession of the House of Hanover, Holland and France were to England what the right hand horseman and the left hand horseman in Bürger's fine ballad were to Wildgraf—the good and the evil counsellor,—the angel of light and the angel of darkness. The ascendancy of France was inseparably connected with the prevalence of tyranny in domestic affairs. The ascendancy of Holland was as inseparably connected with the prevalence of political liberty, and of mutual toleration among Protestant sects. How fatal and degrading an influence Louis was destined to exercise on the British counsels, how great a deliverance our country was destined to owe to the States, could not be foreseen when the Triple Alliance was concluded. Yet even then all discerning men considered it as a good omen for the English constitution, and the reformed religion, that the Government had attached itself to Holland, and had assumed a firm and somewhat hostile attitude towards France. The fame of this measure was the greater, because it stood so entirely alone. It was the single eminently good act performed by the Government during the interval between the Restoration and the

Revolution.* Every person who had the smallest part in it, and some who had no part in it at all, battled for a share of the credit. The most close-fisted republicans were ready to grant money for the purpose of carrying into effect the provisions of this popular alliance; and the great Tory poet of that age, in his finest satires, repeatedly spoke with reverence of the "triple bond."

This negotiation raised the fame of Temple both at home and abroad to a great height, —to such a height, indeed, as seems to have excited the jealousy of his friend Arlington. While London and Amsterdam resounded with acclamations of joy, the Secretary, in very cold official language, communicated to his friend the approbation of the King; and lavish as the Government was of titles and of money, its ablest servant was neither ennobled nor enriched.

Temple's next mission was to Aix-la-Chapelle, where a general congress met for the purpose of perfecting the work of the Triple Alliance. On his road he received abundant proofs of the estimation in which he was held. Salutes were fired from the walls of the towns through which he passed; the population poured forth into the streets to see him; and the magistrates entertained him with speeches and banquets. After the close of the negotiations at Aix he was appointed ambassador at the Hague. But in both these missions he experienced much vexation from the rigid, and, indeed, unjust parsimony of the Government. Profuse to many unworthy applicants, the ministers were niggardly to him alone. They secretly disliked his politics; and they seem to have indemnified themselves for the humiliation of adopting his measures by cutting down his salary, and delaying the settlement of his outfit.

At the Hague he was received with cordiality by De Witt, and with the most signal marks of respect by the States-General. His situation was in one point extremely delicate. The Prince of Orange, the hereditary chief of the faction opposed to the administration of De Witt, was the nephew of Charles. To preserve the confidence of the ruling

* "The only good public thing that hath been done since the King come into England." —PEPYS'S *Diary*, February 14th, 1667-8.

party without showing any want of respect to so near a relation of his own master was no easy task. But Temple acquitted himself so well, that he appears to have been in great favour, both with the Grand Pensionary and with the Prince.

In the main, the years which he spent at the Hague seem, in spite of some pecuniary difficulties, occasioned by the ill-will of the English ministers, to have passed very agreeably. He enjoyed the highest personal consideration. He was surrounded by objects interesting in the highest degree to a man of his observant turn of mind. He had no wearing labour, no heavy responsibility; and if he had no opportunity of adding to his high reputation, he ran no risk of impairing it.

But evil times were at hand. Though Charles had for a moment deviated into a wise and dignified policy, his heart had always been with France; and France employed every means of seduction to lure him back. His impatience of control, his greediness for money, his passion for beauty, his family affections, all his tastes, all his feelings, were practised on with the utmost dexterity. His interior Cabinet was now composed of men such as that generation, and that generation alone, produced; of men at whose audacious profligacy the rats of our own time look with the same sort of admiring despair with which our sculptors contemplate the Theseus, and our painters the Cartoons. To be a real, hearty, deadly enemy of the liberties and religion of the nation was, in that dark conclave, an honourable distinction;—a distinction which belonged only to the daring and impetuous Clifford. His associates were men to whom all creeds and constitutions were alike; who were equally ready to profess and to persecute the faith of Geneva, of Lambeth, and of Rome, who were equally ready to be tools of power without any sense of loyalty, and stirrers of sedition without any zeal for freedom.

It was hardly possible even for a man so penetrating as De Witt to foresee to what depths of wickedness and infamy this execrable administration would descend. Yet, many signs of the great woe which was coming on Europe,—the visit of the Duchess of Orleans to her brother,—the unexplained mission of

Evil times at hand.

Uneasiness of De Witt.

Buckingham to Paris,—the sudden occupation of Lorraine by the French,—rendered the Grand Pensionary uneasy; and his alarm increased when he learned that Temple had received orders to repair instantly to London. He earnestly pressed for an explanation. Temple very sincerely replied that he hoped that the English Ministers would adhere to the principles of the Triple Alliance. "I can answer," he said, "only for myself. But that I can do. If a new system is to be adopted, I will never have any part in it. I have told the King so; and I will make my words good. If I return you will know more; and if I do not return you will guess more." De Witt smiled, and answered that he would hope the best; and would do all in his power to prevent others from forming unfavourable surmises.

In October 1670 Temple reached London; and all his worst suspicions were immediately more than confirmed. He

Temple
returns to
London.

repaired to the Secretary's house, and was kept an hour and a half waiting in the antechamber, whilst

Lord Ashley was closeted with Arlington. When at length the doors were thrown open, Arlington was dry and cold, asked trifling questions about the voyage, and then, in order to escape from the necessity of discussing business, called in his daughter;—an engaging little girl of three years old, who was long after described by poets "as dressed in all the bloom of smiling nature," and whom Evelyn, one of the witnesses of her inauspicious marriage, mournfully designated as "the sweetest, hopefullest, most beautiful child, and most virtuous too." Any particular conversation was impossible; and Temple, who, with all his constitutional or philosophical indifference, was sufficiently sensitive on the side of vanity, felt this treatment keenly. The next day he offered himself to the notice of the King, who was snuffing up the morning air, and feeding his ducks in the Mall. Charles was civil, but, like Arlington, carefully avoided all conversation on politics. Temple found that all his most respectable friends were entirely excluded from the secrets of the inner council; and were awaiting in anxiety and dread for what those mysterious deliberations might produce. At length he obtained a glimpse of light. The bold spirit and fierce passions of Clifford rendered him the most unfit of all men

to be the keeper of a momentous secret. He told Temple, with great vehemence, that the States had behaved basely, that De Witt was a rogue and a rascal, that it was below the King of England, or any other king, to have anything to do with such wretches; that this ought to be made known to all the world, and that it was the duty of the Minister at the Hague to declare it publicly. Temple commanded his temper as well as he could, and replied calmly and firmly, that he should make no such declaration, and that if he were called upon to give his opinion of the States and their Ministers, he would say exactly what he thought.

He now saw clearly that the tempest was gathering fast,—that the great alliance which he had framed, and over which he had watched with parental care, was about to be dissolved,—that times were at hand when it would be necessary for him, if he continued in public life, either to take part decidedly against the Court, or to forfeit the high reputation which he enjoyed at home and abroad. He began to make preparations for retiring altogether from business. He enlarged a little garden which he had purchased at Sheen, and laid out some money

Prepares to
retire.

in ornamenting his house there. He was still nominally ambassador to Holland; and the English Ministers continued during some months to flatter the States with the hope that he would speedily return. At length, in June 1671, the designs of the "Cabal" were ripe. The infamous treaty with France had been ratified. The season of deception was past, and that of insolence and violence had arrived. Temple received his formal dismissal, kissed the King's hand, was repaid for his services with some of those vague compliments and promises which cost so little to the cold heart, the easy temper, and the ready tongue of Charles, and quietly withdrew to his little nest, as he called it, at Sheen.

There he amused himself with gardening, which he practised so successfully that the fame of his fruit soon spread far and wide. But letters were his chief solace. He had, as we have mentioned, been from his youth in the habit of diverting himself with composition. The clear and agreeable language of his despatches had early attracted the notice of his employers; and before the peace of Breda, he had, at the request of Arling-

Occupations
at Sheen.

ton, published a pamphlet on the war, of which nothing is now known, except that it had some vogue at the time, and that Charles, not a contemptible judge, pronounced it to be very well written. He had also, a short time before he began to reside at the Hague, written a treatise on the State of Ireland, in which he showed all the feelings of a Cromwellian. He had gradually formed a style singularly lucid and melodious—superficially deformed, indeed, by Gallicisms and Hispanicisms, picked up in travel or in negotiation—but at the bottom pure English—generally flowing with careless simplicity, but occasionally rising even into Ciceronian magnificence. The length of his sentences has often been remarked. But in truth this length is only apparent. A critic who considers as one sentence everything that lies between two full stops will undoubtedly call Temple's sentences long. But a critic who examines them carefully will find that they are not swollen by parenthetical matter; that their structure is scarcely ever intricate; that they are formed merely by accumulation; and that, by the simple process of leaving out conjunctions, and substituting full stops for colons and semicolons, they might, without any alteration in the order of the words, be broken up into very short periods, with no sacrifice except that of euphony. The long sentences of Hooker and Clarendon, on the contrary, are really long sentences, and cannot be turned into short ones, without being entirely taken to pieces.

The best known of the works which Temple composed during his first retreat from official business are, an Essay on Government, which seems to us exceedingly childish, and an Account of the United Provinces, which we think a masterpiece in its kind. Whoever

Literary works.

compares these two pieces will probably agree with us in thinking that Temple

was not a very deep or accurate reasoner, but was an excellent observer—that he had no call to philosophical speculation, but that he was qualified to excel as a writer of memoirs and travels.

While Temple was engaged in these pursuits, the great storm which had long

Bursting of the storm.

been brooding over Europe burst with such fury as for a moment seemed to

threaten ruin to all free governments, and all Protestant Churches. France and England, without seeking for any decent

pretext, declared war against Holland. The immense armies of Louis poured across the Rhine, and invaded the territory of the United Provinces. The Dutch seemed to be paralyzed by terror. Great towns opened their gates to straggling parties. Regiments flung down their arms without seeing an enemy. Guelderland, Overysse, Utrecht, were overrun by the conquerors. The fires of the French camp were seen from the walls of Amsterdam. In the first madness of their despair the devoted people turned their rage against the most illustrious of their fellow citizens. De Ruyter was saved with difficulty from assassins. De Witt was torn to pieces by an infuriated rabble. No hope was left to the Commonwealth, save in the dauntless, the ardent, the indefatigable, the unconquerable spirit which glowed under the frigid demeanour of the young Prince of Orange.

The young Prince of Orange.

That great man rose at once to the full dignity of his part, and approved himself a worthy descendant of the line of heroes who had vindicated the liberties of Europe against the House of Austria. Nothing could shake his fidelity to his country—not his close connection with the royal family of England—not the most earnest solicitations—not the most tempting offers. The spirit of the nation—that spirit which had maintained the great conflict against the gigantic power of Philip—revived in all its strength. Counsels such as are inspired by a generous despair, and are almost always followed by a speedy dawn of hope, were gravely concerted by the statesmen of Holland. To open their dykes—to man their ships—to leave the country, with all its miracles of art and industry—its cities, its canals, its villas, its pastures, and its tulip gardens—buried under the waves of the German Ocean—to bear to a distant climate their Calvinistic faith and their old Batavian liberties—to fix, perhaps with happier auspices, the new Stadthouse of the Commonwealth, under other stars, and amidst a strange vegetation, in the spice islands of the Eastern seas—such were the plans which they had the spirit to form: and it is seldom that men who have the spirit to form such plans are reduced to the necessity of executing them.

The allies had, during a short period,

obtained the most appalling success. This was their auspicious moment. They neglected to improve it. It passed away; and it returned no more. The Prince of Orange arrested the progress of the French armies. Louis returned to be amused and flattered at Versailles. The country was under water. The winter approached. The weather became stormy. The fleets of the combined kings could no longer keep the sea. The republic had obtained a respite; and the circumstances were such that a respite was, in a military view, important; in a political view almost decisive.

The alliance against Holland, formidable as it was, was yet of such a nature that it could not succeed at all, unless it succeeded at once. The English Ministers could not carry on the war without money. They could legally obtain money only from the Parliament; and they were most unwilling to call the Parliament together. The measures which Charles had adopted at home were even more unpopular than his foreign policy. He had bound himself by a treaty with Louis to re-establish the Catholic religion in England; and, in pursuance of this design, he had entered on the same course which his brother afterwards pursued with greater obstinacy to a more fatal end. He had annulled, by his own sole authority, the laws against Catholics and other dissenters. The matter of the Declaration of Indulgence exasperated one-half of his subjects, and the manner the other half. Liberal men would have rejoiced to see toleration granted, at least to all Protestant sects. Many high churchmen had no objection to the King's dispensing power. But a tolerant act done in an unconstitutional way excited the opposition of all who were zealous either for the Church or for the privileges of the people; that is to say, of ninety-nine Englishmen out of a hundred. The Ministers were, therefore, most unwilling to meet the Houses. Lawless and desperate as their counsels were, the boldest of them had too much value for his neck to think of resorting to benevolences, privy-seals, ship-money, or any of the other unlawful modes of extortion which former kings had employed. The audacious fraud of shutting up the Exchequer furnished them with about twelve hundred thousand pounds;—a

sum which, even in better hands than theirs, would hardly have suffered for the war-charges of a single year. And this was a step which could never be repeated;—a step which, like most breaches of public faith, was speedily found to have caused pecuniary difficulties greater than those which it removed. All the money that could be raised was gone; Holland was not conquered; and the King had no resource but in a Parliament.

Had a general election taken place at this crisis, it is probable that the country would have sent up representatives as resolutely hostile to the Court as those who met in November 1640; that the whole domestic and foreign policy of the Government would have been instantly changed: and that the members of the Cabal would have expiated their crimes on Tower-Hill. But the House of Commons was still the same which had been elected twelve years before, in the midst of the transports of joy, repentance, and loyalty which followed the Restoration; and no pains had been spared to attach it to the Court by places, pensions, and bribes. To the great mass of the people it was scarcely less odious than the Cabinet. Yet, though it did not immediately proceed to those strong measures which a new House would in all probability have adopted, it was sullen and unmanageable; and undid, slowly indeed and by degrees, but most effectually, all that the Ministers had done. In one session it annihilated their system of internal government. In a second session it gave a death-blow to their foreign policy.

The dispensing power was the first object of attack. The Commons would not expressly approve the war; but neither did they as yet expressly condemn it; and they were even willing to grant the King a supply for the purpose of continuing hostilities, on condition that he would redress internal grievances, among which the Declaration of Indulgence held the foremost place.

Shaftesbury, who was Chancellor, saw that the game was up,—that he had got all that was to be got by siding with despotism and Popery, and that it was high time to think of being a demagogue and a good Protestant. The Lord Treasurer Clifford was marked out by his boldness, by his openness, by his zeal for

The country's
representatives.

Grievances
to redress.

the Catholic religion, by something which, compared with the villany of his colleagues, might almost be called honesty, to be the scape-goat of the whole conspiracy. The King came in person to the House of Peers to request their lordships to mediate between him and the Commons touching the Declaration of Indulgence. He remained in the House while his speech was taken into consideration,—a common practice with him;—

Charles II. and debates. for the debates amused his sated mind, and were sometimes, he used to say, as good as a comedy. A more sudden turn his Majesty had certainly never seen in any comedy of intrigue, either at his own play-house, or at the Duke's, than that which this memorable debate produced. The Lord Treasurer spoke with characteristic ardour and intrepidity in defence of the Declaration. When he sat down, the Lord Chancellor rose from the woollack, and to the amazement of the King, and of the House, attacked Clifford—attacked the Declaration for which he had himself spoken in council—gave up the whole policy of the Cabinet—and declared himself on the side of the House of Commons. Even that age had not witnessed so portentous a display of impudence.

The King, by the advice of the French Court, which cared much more about the war on the Continent than about the conversion of the English heretics, determined to save his foreign policy at the expense of his plans in favour of the

Declaration of Indulgence cancelled. Catholic Church. He obtained a supply; and in return for this concession he cancelled the Declaration of Indulgence and made a formal renunciation of the dispensing power before he prorogued the Houses.

But it was no more in his power to go on with the war than to maintain his arbitrary system at home. His Ministry, betrayed within, and **Ministry going to pieces.** fiercely assailed from without, went rapidly to pieces. Clifford threw down the white staff, and retired to the woods of Ugbrook, vowing, with bitter tears, that he would never again see that turbulent city, and that perfidious Court. Shaftesbury was ordered to deliver up the Great Seal; and instantly carried over his front of brass and his tongue of poison to the ranks of the Opposition. The remaining members of the Cabal had

neither the capacity of the late Chancellor, nor the courage and enthusiasm of the late Treasurer. They were not only unable to carry on their former projects, but began to tremble for their own lands and heads. The Parliament, as soon as it again met, began to murmur against the alliance with France, and the war with Holland; and the murmur gradually swelled into a fierce and terrible clamour. Strong resolutions were adopted against Lauderdale and Buckingham. Articles of impeachment were exhibited against Arlington. The Triple Alliance was mentioned with reverence in every debate; and the eyes of all men were turned towards the quiet orchard, where the author of that great league was amusing himself with reading and gardening.

Temple was ordered to attend the King, and was charged with the office of negotiating a separate peace with Holland. The Spanish Ambassador to the Court of London had been empowered by the States-General to treat in their name. With him Temple came to a speedy agreement; and in three days a treaty was concluded.

The highest honours of the State were now within Temple's reach. After the retirement of Clifford, the white staff had been delivered to Thomas Osborne, soon after created Earl of Danby, who was related to Lady Temple, and had, many years earlier, travelled and played tennis with Sir William. Danby was an interested and unscrupulous man, but by no means destitute of abilities or judgment. He was, indeed, a far better adviser than any in whom Charles had hitherto reposed confidence. Clarendon was a man of another generation, and did not in the least understand the society which he had to govern. The members of the Cabal were ministers of a foreign power, and enemies of the Established Church; and had in consequence raised against themselves and their master an irresistible storm of national and religious hatred. Danby wished to strengthen and extend the prerogative; but he had the sense to see that this could be done only by a complete change of system. He knew the English people and the House of Commons; and he knew that the course which Charles had recently taken, if obstinately pursued, might well end before the windows of the Banqueting House. He saw that the true policy of

Temple summoned to the King.

The Earl of Danby.

the Crown was to ally itself, not with the feeble, the hated, the down-trodden Catholics, but with the powerful, the wealthy, the popular, the dominant Church of England; to trust for aid, not to a foreign prince whose name was hateful to the British nation, and whose succours could be obtained only on terms of vassalage, but to the old Cavalier party, to the landed gentry, the clergy, and the universities. By rallying round the throne the whole strength of the Royalists and High-Churchmen, and by using without stint all the resources of corruption, he flattered himself that he could manage the Parliament. That he failed is to be attributed less to himself than to his master. Of the disgraceful dealings which were still kept up with the French Court, Danby deserved little or none of the blame, though he suffered the whole punishment.

Danby, with great parliamentary talents, had paid little attention to foreign politics; and wished for the help of some person on whom he could rely in this department. A plan was accordingly arranged for making Temple Secretary of

Office of
Secretary of
State.

State. Arlington was the only member of the Cabal who still held office in England. The temper of

the House of Commons made it necessary to remove him, or rather to require him to sell out; for at that time the great offices of State were bought and sold as commissions in the army now are. Temple was informed that he should have the Seals if he would pay Arlington six thousand pounds. The transaction had nothing in it discreditable, according to the notions of that age, and the investment would have been a good one; for we imagine that at that time the gains which a Secretary of State might make without doing anything considered as improper, were very considerable. Temple's friends offered to lend him the money; but he was fully determined not to take a post of so much responsibility in times so agitated, and under a prince on whom so little reliance could be placed, and accepted the embassy to the Hague, leaving Arlington to find another purchaser.

Before Temple left England he had a long audience of the King, to whom he spoke with great severity of the measures adopted by the late Ministry. The King owned that things had turned out ill. "But," said he, "if I had been well

served, I might have made a good business of it." Temple was alarmed at this language, and inferred from it that the system of the Cabal had not been

Audience of
the King.

abandoned, but only suspended. He therefore thought it his duty to go, as he expresses it, "to the bottom of the matter." He strongly represented to the King the impossibility of establishing either absolute government or the Catholic religion in England; and concluded by repeating an observation which he had heard at Brussels from M. Gourville, a very intelligent Frenchman well known to Charles: "A king of England," said Gourville, "who is willing to be the man of his people, is the greatest king in the world; but if he wishes to be more, by heaven he is nothing at all!" The King betrayed some symptoms of impatience during this lecture; but at last laid his hand kindly on Temple's shoulder, and said, "You are right, and so is Gourville; and I will be the man of my people."

With this assurance Temple repaired to the Hague in July 1674. Holland was now secure, and France was surrounded on every side by enemies. Spain and

Temple goes
to the Hague.

the Empire were in arms for the purpose of compelling Louis to abandon all that he had acquired since the treaty of the Pyrenees. A congress for the purpose of putting an end to the war was opened at Nimeguen under the mediation of England, in 1675; and to that congress Temple was deputed. The work of conciliation, however, went on very slowly. The belligerent powers were still sanguine, and the mediating power was unsteady and insincere.

In the meantime the Opposition in England became more and more formidable, and seemed fully determined to force the King into a war with France. Charles was desirous of making some appointments which might strengthen the Administration, and conciliate the confidence of the public. No man was more esteemed by the nation than Temple; yet he had never been concerned in any Opposition to any Government. In July 1677 he was sent for from Nimeguen. Charles received him with caresses, earnestly pressed him to accept the seals of Secretary of State, and promised to bear half the charge of buying out the present holder. Temple was charmed by the kindness and politeness

of the King's manner, and by the liveliness of his conversation; but his prudence was not to be so laid asleep. He

Refusing the Seals. calmly and steadily excused himself. The King affected to treat his excuses as mere jests, and gaily said, "Go; get you gone to Sheen. We shall have no good of you till you have been there; and when you have rested yourself, come up again." Temple withdrew, and stayed two days at his villa, but returned to town in the same mind; and the King was forced to consent at least to a delay.

But while Temple thus carefully shunned the responsibility of bearing a part in the general direction of affairs, he gave a signal proof of that never-failing sagacity which enabled him to find out ways of distinguishing himself without risk. He had a principal share in bringing about an event which was at the time hailed with general satisfaction, and which subsequently produced consequences of the highest importance. This was the marriage of the Prince of Orange and the Lady Mary.

In the following year Temple returned to the Hague; and thence he was ordered, in the close of 1678, to repair to Nimeguen, for the purpose of signing the hollow and unsatisfactory treaty by which the distractions of Europe were for a short time suspended. He grumbled much at being required to sign bad articles which he had not framed, and still more at having to travel in very cold weather. After all, a difficulty of etiquette prevented him from signing, and he returned to the Hague. Scarcely had he arrived there when he received intelligence that the King, whose embarrassments were now far greater than ever, was fully resolved immediately to appoint him Secretary of State.

A third refusal. He a third time declined that high post, and began to make preparations for a journey to Italy; thinking, doubtless, that he should spend his time much more pleasantly among pictures and ruins than in such a whirlpool of political and religious frenzy as was then raging in London.

But the King was in extreme necessity, and was no longer to be so easily put off. Temple received positive orders to repair instantly to England. He obeyed, and found the country in a state even more fearful than that which he had pictured to himself.

Those are terrible conjunctures, when the discontents of a nation—not light and capricious discontents, but discontents which have been steadily increasing during a long series of years—have attained their full maturity. The discerning few predict the approach of these conjunctures, but predict in vain. To the many, the evil season comes as a total eclipse to the sun at noon comes to a people of savages. Society which, but a short time before, was in a state of perfect repose, is on a sudden agitated with the most fearful convulsions, and seems to be on the verge of dissolution; and the rulers who, till the mischief was beyond the reach of all ordinary remedies, had never bestowed one thought on its existence, stand bewildered and panic-stricken, without hope or resource, in the midst of the confusion.

One such conjuncture this generation has seen. God grant that we may never see another! At such a conjuncture it was that Temple landed on English ground in the beginning of 1679.

The Parliament had obtained a glimpse of the King's dealings with France; and their anger had been unjustly directed against Danby, whose conduct as to that matter had been, on the whole, deserving rather of praise than of censure. The Popish plot, the murder of Godfrey, the infamous inventions of Oates, the discovery of Colman's letters, had excited the nation to madness. All the disaffections which

Disturbance. had been generated by eighteen years of misgovernment had come to the birth together. At this moment the King had been advised to dissolve that Parliament which had been elected just after his restoration; and which, though its composition had since that time been greatly altered, was still far more deeply imbued with the old cavalier spirit than any that had preceded, or that was likely to follow it. The general election had commenced, and was proceeding with a degree of excitement never before known. The tide ran furiously against the Court. It was clear that a majority of the new House of Commons would be—to use a word which came into fashion a few months later—decided Whigs. Charles had found it necessary to yield to the violence of the public feeling. The Duke of York was on the point of retiring to Holland. "I never," says Temple, who had seen the abolition of monarchy,

the dissolution of the Long Parliament, the fall of the Protectorate, the declaration of Monk against the Rump—"I never saw greater disturbance in men's minds."

The King now with the utmost urgency besought Temple to take the seals. The pecuniary part of the arrangement no longer presented any difficulty; and Sir William was not quite so decided in his refusal as he had formerly been. He took three days to consider the posture of affairs, and to examine his own feelings; and he came to the conclusion that "the scene was unfit for such an actor as he knew himself to be." Yet he felt that, by refusing help to the King at such a crisis he might give much offence and incur much censure. He shaped his course with his usual dexterity. He

Dexterity and prudence. affected to be very desirous of a seat in Parliament; yet he contrived to be an unsuccessful candidate; and, when all the writs were returned, he represented that it would be useless for him to take his seals till he could procure admittance to the House of Commons; and in this manner he succeeded in avoiding the greatness which others desired to thrust upon him.

The Parliament met; and the violence of its proceedings surpassed all expectation. The Long Parliament itself, with much greater provocation, had at its commencement been less violent. The Treasurer was instantly driven from office, impeached, sent to the Tower. Sharp and vehement votes were passed on the subject of the Popish Plot. The Commons were prepared to go much further,—to wrest from the King his prerogative of mercy in cases of high political crimes, and to alter the succession to the Crown. Charles was thoroughly perplexed and dismayed. Temple saw him almost daily, and thought that at last he was impressed with a deep sense of his errors, and of the miserable state into which they had brought him. Their conferences became longer and more confidential; and Temple began to flatter himself with the hope that he might be able to reconcile parties at home as he had reconciled hostile States abroad,—that he might be able to suggest a plan which should allay all heats, efface the memory of all past grievances, —secure the nation from misgovernment, and protect the Crown against the encroachments of Parliament.

Temple's plan was that the existing Privy Council, which consisted of fifty members, should be dissolved,—that there should no longer be a small interior council, like that which is now designated as the Cabinet,—that a new Privy Council of thirty members should be appointed,—and that the King should pledge himself to govern by the constant advice of this body,—to suffer all his affairs of every kind to be freely debated there, and not to reserve any part of the public business for a secret committee.

Temple's plan.

Fifteen of the members of this new Council were to be great officers of State. The other fifteen were to be independent noblemen and gentlemen of the greatest weight in the country. In appointing them particular regard was to be had to the amount of their property. The whole annual income of the councillors was estimated at £300,000. The annual income of all the members of the House of Commons was not supposed to exceed £400,000. The appointment of wealthy councillors Temple describes as "a chief regard, necessary to this Constitution."

This plan was the subject of frequent conversation between the King and Temple. After a month passed in discussions, to which no third person appears to have been privy, Charles declared himself satisfied of the expediency of the proposed measure, and resolved to carry it into effect.

It is much to be regretted that Temple has left us no account of these conferences. Historians have, therefore, been left to form their own conjectures as to the object of this very extraordinary plan—"this Constitution," as Temple himself calls it. And we cannot say that any explanation which has yet been given seems to us quite satisfactory. Indeed, almost all the writers whom we have consulted appear to consider the change as merely a change of administration; and, so considering it, they generally applaud it. Mr. Courtenay, who has evidently examined this subject with more attention than has often been bestowed upon it, seems to think Temple's scheme very strange, unintelligible, and absurd. It is with very great diffidence that we offer our own solution of what we have always thought one of the great riddles of English history. We are strongly inclined to suspect that the

No satisfactory explanation.

appointment of the new Privy Council was really a much more remarkable event than has generally been supposed; and that what Temple had in view was to effect, under colour of a change of administration, a permanent change in the Constitution.

The plan, considered as a plan for the formation of a Cabinet, is so obviously inconvenient, that we cannot easily believe this to have been

Cabinet Councils.

Temple's chief object.

The number of the new Council alone would be a most serious objection. The largest Cabinets of modern times have not, we believe, consisted of more than fifteen members. Even this number has generally been thought too large. The Marquess Wellesley, whose judgment, on a question of executive administration, is entitled to as much respect as that of any statesman that England ever produced, expressed, on a very important occasion,* his conviction that even thirteen was an inconveniently large number. But in a Cabinet of thirty members what chance could there be of finding unity, secrecy, expedition—any of the qualities which such a body ought to possess? If, indeed, the members of such a Cabinet were closely bound together by interest, if they all had a deep stake in the permanence of the Administration, if the majority were dependent on a small number of leading men, the thirty might perhaps act as a smaller number would act, though more slowly, more awkwardly, and with more risk of improper disclosures. But the Council which Temple proposed was so framed that, if instead of thirty members it had contained only ten, it would still have been the most unwieldy and discordant Cabinet that ever sat. One half of the members were to be persons holding no office—persons who had no motive to compromise their opinions, or to take any share of the responsibility of an unpopular measure;—persons, therefore, who might be expected, as often as there might be a crisis requiring the most cordial co-operation, to draw off from the rest, and to throw every difficulty in the way of the public business. The circumstance that they were men of enormous private wealth only made the matter worse. The House of Commons is a checking body, and therefore it is

desirable that it should, to a great extent, consist of men of independent fortune, who receive nothing and expect nothing from the Government. But with executive boards the case is quite different. Their business is not to check, but to act. The very same things, therefore, which are the virtues of Parliaments may be vices in Cabinets. We can hardly conceive a greater curse to the country than an Administration, the members of which should be as perfectly independent of each other, and as little under the necessity of making mutual concessions, as the representatives of London and Devonshire in the House of Commons are, and ought to be. Now Temple's new Council was to contain fifteen members, who were to hold no offices, and the average amount of whose private estates was ten thousand pounds a year; an income which, in proportion to the wants of a man of rank of that period, was at least equal to thirty thousand a year in our time. Was it to be expected that such men would gratuitously take on themselves the labour and responsibility of Ministers, and the unpopularity which the best Ministers must sometimes be prepared to brave? Could there be any doubt that an Opposition would soon be formed within the Cabinet itself, and that the consequence would be disunion, altercation, tardiness in operations, the divulging of secrets, everything most alien from the nature of an executive council?

Is it possible to imagine that considerations so grave and so obvious should have altogether escaped the notice of a man of Temple's sagacity and experience? One of two things appears to us to be certain,—either that his project has been misunderstood, or that his talents for public affairs have been overrated.

We lean to the opinion that his project has been misunderstood. His new Council, as we have shown, would have been an exceedingly bad Cabinet. The inference which we are inclined to draw is this,—that he meant his Council to serve some other purpose than that of a mere Cabinet. Barillon used four or five words which contain, we think, the key of the whole mystery. Mr. Courtenay calls them pithy words; but he does not, if we are right, apprehend their whole force. "Ce sont," said Barillon, "des états, non des conseils."

Key of the mystery.

In order clearly to understand what

* In the negotiations of 1812.

we imagine to have been Temple's views, we must remember that the Government of England was at that moment, and had been during nearly eighty years, in a

A state of transition. A state of transition. A change, not the less real nor the less extensive

because disguised under ancient names and forms, was in constant progress. The theory of the Constitution—the fundamental laws which fix the powers of the three branches of the legislature—underwent no material change between the time of Elizabeth and the time of William the Third. The most celebrated laws of the seventeenth century on those subjects—the Petition of Right—the Declaration of Right—are purely declaratory. They purport to be merely recitals of the old polity of England. They do not establish free government as a salutary improvement, but claim it as an undoubted and immemorial inheritance. Nevertheless, there can be no doubt that, during the period of which we speak, all the mutual relations of all the orders of the State did practically undergo an entire change. The letter of the law might be unaltered; but, at the beginning of the seventeenth century, the power of the Crown was, in fact, decidedly predominant in the State; and at the end of that century the power of Parliament, and especially the Lower House, had become, in fact, decidedly predominant. At the beginning of the century the sovereign perpetually violated, with little or no opposition, the clear privileges of Parliament. At the close of the century the Parliament had virtually drawn to itself just as much as it chose of the prerogative of the Crown. The sovereign retained the shadow of that authority of which the Tudors had held the substance. He had a legislative veto which he never ventured to exercise—a power of appointing Ministers whom an address of the Commons could at any moment force him to discard—a power of declaring war which, without Parliamentary support, could not be carried on for a single day. The Houses of Parliament were now not merely legislative assemblies—not merely checking assemblies. They were great Councils of State, whose voice, when loudly and firmly raised, was decisive on all questions of foreign and domestic policy. There was no part of the whole system of Government with which they had not power to interfere by advice equivalent to command; and, if they

abstained from intermeddling with some departments of the executive administration, they were withheld from doing so only by their own moderation, and by the confidence which they reposed in the Ministers of the Crown. There is perhaps no other instance in history of a change so complete in the real constitution of an empire, unaccompanied by any corresponding change in the theoretical constitution. The disguised transformation of the Roman commonwealth into a despotic monarchy, under the long administration of Augustus, is perhaps the nearest parallel.

This great alteration did not take place without strong and constant resistance on the part of the Kings of the House of Stuart. Till 1642 that resistance was generally of an open, violent, and lawless nature. If the Commons refused supplies, the sovereign levied a "benevolence." If the Commons impeached a favourite Minister, the sovereign threw the chiefs of the Opposition into prison. Of these efforts to keep down the Parliament by despotic force, without the pretext of law, the last, the most celebrated, and the most wicked was the attempt to seize the five members. That attempt was the signal for civil war, and was followed by eighteen years of blood and confusion.

The days of trouble passed by; the exiles returned; the throne was again set up in its high place; the peerage and the hierarchy recovered their ancient splendour. The fundamental laws which had been recited in the Petition of Right were again solemnly recognized. The theory of the English constitution was the same on the day when the hand of Charles the Second was kissed by the kneeling Houses at Whitehall, as on the day when his father set up the royal standard at Nottingham. There was a short period of doting fondness, a *hysterica passio* of loyal repentance and love. But emotions of this sort are transitory; and the interests on which depends the progress of great societies are permanent. The transport of reconciliation was soon over; and the old struggle recommenced.

The old struggle recommenced;—but not precisely after the old fashion. The sovereign was not indeed a man whom any common warning would have restrained from the grossest violations of law. But it was no common warning

that he had received. All around him were the recent signs of the vengeance

Vengeance of an oppressed nation.

of an oppressed nation,—the fields on which the noblest blood of the island had been poured forth,—

the castles shattered by the cannon of the Parliamentary armies,—the hall where sat the stern tribunal to whose bar had been led, through lowering ranks of pikemen, the captive heir of a hundred kings,—the stately pilasters, before which the great execution had been so fearlessly done, in the face of heaven and earth. The restored Prince, admonished by the fate of his father, never ventured to attack his Parliaments with open and arbitrary violence. It was at one time by means of the Parliament itself, at another time by means of the courts of law, that he attempted to regain for the Crown its old predominance. He began with great advantages. The Parliament of 1661 was called while the nation was still full of joy and tenderness. The great majority of the House of Commons were zealous royalists. All the means of influence which the patronage of the Crown afforded were used without limit. Bribery was reduced to a system. The King when he could spare money from his pleasures for nothing else, could spare it for purposes of corruption. While the defence of the coasts was neglected, while ships rotted, while arsenals lay empty, while turbulent crowds of unpaid seamen swarmed in the streets of the seaports, something could still be scraped together in the Treasury for the members of the House of Commons. The gold of France was largely employed for the same purpose. Yet it was found, as indeed might have been foreseen, that there is a natural limit to the effect which can be produced by means like these. There is one thing which the most corrupt senates are unwilling to sell, and that is the power which makes them worth buying. The same selfish motives which induce them to take a price for a particular vote, will induce them to oppose every measure of which the effect would be to lower the importance, and consequently the price of their votes. About the income of their power, so to speak, they are quite ready to make bargains. But they are not easily persuaded to part with any fragment of the principal. It is curious to observe how, during the long continuance of this Parliament—the pensionary Parliament

as it was nicknamed by contemporaries—though every circumstance seemed to be favourable to the Crown, the power of the Crown was constantly sinking, and that of the Commons constantly rising. The meetings of the Houses were more frequent than in former reigns; their interference was more harassing to the Government than in former reigns: they had begun to make peace, to make war, to pull down, if they did not set up, Administrations. Already a new class of statesmen had appeared, unheard of before that time, but common ever since. Under the Tudors and the earlier Stuarts, it was generally by courtly arts, or by official skill and knowledge, that a politician raised himself to power. From the time of Charles the Second down to our own days a different species of talent, Parliamentary talent, has been the most valuable of all Parliamentary talent. the qualifications of an English statesman. It has stood in the place of all other acquirements. It has covered ignorance, weakness, rashness, the most fatal mal-administration. A great negotiator is nothing when compared with a great debater; and a Minister who can make a successful speech need trouble himself little about an unsuccessful expedition. This is the talent which has made judges without law, and diplomatists without French—which has sent to the admiralty men who did not know the stern of a ship from her bowsprit, and to the India Board men who did not know the difference between a rupee and a pagoda—which made a foreign secretary of Mr. Pitt, who, as George the Second said, had never opened Vattel,—and which was very near making a chancellor of the exchequer of Mr. Sheridan, who could not work a sum in long division. This was the sort of talent which raised Clifford from obscurity to the head of affairs. To this talent Danby—by birth a simple country gentleman—owed his white staff, his garter, and his dukedom. The encroachment of the power of the Parliament on the power of the Crown resembled a fatality, or the operation of some great law of nature. The will of the individual on the throne, or of the individuals in the two Houses, seemed to go for nothing. The King might be eager to encroach, yet something constantly drove him back. The Parliament might be loyal, even servile; yet something constantly urged them forward.

These things were done in the green tree. What then was likely to be done in the dry? The Popish Plot and the general election came together, and found a people predisposed to the most violent excitation. The composition of the House of Commons was changed. The Legislature was filled with men who leaned to Republicanism in politics, and to Presbyterianism in religion. They

Attacks on the Government. no sooner met than they commenced a series of attacks on the Govern-

ment, which, if successful, must have made them supreme in the State.

Where was this to end? To us, who have seen the solution, the question presents few difficulties. But to a statesman of the age of Charles the Second—to a statesman who wished, without depriving the Parliament of its privileges, to maintain the monarch in his old supremacy—it must have appeared very perplexing.

Clarendon had, when Minister, struggled, honestly perhaps, but, as was his wont, obstinately, proudly, and offensively, against the growing power of the Commons. He was for allowing them their old authority, and not one atom more. He would never have claimed for the Crown a right to levy taxes from the people, without the consent of Parliament. But when the Parliament, in the first Dutch war, most properly insisted on knowing how it was that the money which they had voted had produced so little effect, and began to inquire through what hands it had passed, and on what services it had been expended, Clarendon considered this as a monstrous innovation. He told the King, as he himself says, "that he could not be too indulgent in the defence of the privileges of Parliament, and that he hoped he would never violate any of them; but he desired him to be equally solicitous to prevent the excesses in Parliament, and not to suffer them to extend their jurisdiction to cases they have nothing to do with; and that to restrain them within their proper bounds and limits is as necessary as it is to preserve them from being invaded; and that this was such a new encroachment as had no bottom." This is a single instance. Others might easily be given.

The bigotry, the strong passions, the haughty and disdainful temper, which made Clarendon's great abilities a source of almost unmixed evil to himself and to

the public, had no place in the character of Temple. To Temple, however, as well as to Clarendon, the rapid change which was taking in the real working of the Constitution gave great disquiet; particularly as he had never sat in the English Parliament, and therefore regarded it with none of the predilection which men naturally feel for a body to which they belong, and for a theatre on which their own talents have been advantageously displayed.

To wrest by force from the House of Commons its newly-acquired powers was impossible; nor was Temple a man to recommend such a stroke, even if it had been possible. But was it possible that the House of Commons might be induced to let those powers drop—that, as a great revolution had been effected without any change in the outward form of the Government, so a great counter revolution might be effected in the same manner—that the Crown and the Parliament might be placed in nearly the same relative position in which they had stood in the reign of Elizabeth, and that this might be done without one sword drawn, without one execution, and with the general acquiescence of the nation?

The English people—it was probably thus that Temple argued—will not bear to be governed by the unchecked power of the sovereign, nor ought they

Temple's argument.

to be so governed. At present there is no check but the Parliament. The limits which separate the power of checking those who govern, from the power of governing, are not easily to be defined. The Parliament, therefore, supported by the nation, is rapidly drawing to itself all the powers of Government. If it were possible to frame some other check on the power of the Crown, some check which might be less galling to the sovereign than that by which he is now constantly tormented, and yet which might appear to the people to be a tolerable security against mal-administration, Parliaments would probably meddle less; and they would be less supported by public opinion in their meddling. That the King's hands may not be rudely tied by others, he must consent to tie them lightly himself. That the executive administration may not be usurped by the checking body, something of the character of a checking body must be given to the body which conducts the

executive administration. The Parliament is now arrogating to itself every day a larger share of the functions of the Privy Council. We must stop the evil by giving to the Privy Council something of the constitution of a Parliament. Let the nation see that all the King's measures are directed by a Cabinet composed of representatives of every order in the State—by a Cabinet which contains, not placemen alone, but independent and popular noblemen and gentlemen who have large estates and no salaries, and who are not likely to sacrifice the public welfare, in which they have a deep stake, and the credit which they have obtained with the country, to the pleasure of a Court from which they receive nothing. When the ordinary administration is in such hands as these, the people will be quite content to see the Parliament become what it formerly was—an extraordinary check. They will be quite willing that the House of Commons should meet only once in three years for a short session, and should take as little part in matters of state as it did a hundred years ago.

Thus we believe that Temple reasoned: for on this hypothesis his scheme is intelligible; and on any other hypothesis appears to us, as it does to Mr. Courtenay, exceedingly absurd and unmeaning. This Council was strictly what Barillon called

it—an Assembly of States.
An Assembly of States. There are the representatives of all the great sections

of the community—of the Church, of the Law, of the Peerage, of the Commons. The exclusion of one-half of the councillors from office under the Crown,—an exclusion which is quite absurd when we consider the council merely as an executive board,—becomes at once perfectly reasonable when we consider the council as a body intended to restrain the Crown as well as to exercise the powers of the Crown—to perform some of the functions of a Parliament, as well as the functions of a Cabinet. We see, too, why Temple dwelt so much on the private wealth of the members—why he instituted a comparison between their united incomes, and the united incomes of the members of the House of Commons. Such a parallel would have been idle in the case of a mere Cabinet. It is extremely insignificant in the case of a body intended to supersede the House of Commons in some very important functions.

We can hardly help thinking that the notion of this Parliament on a small scale was suggested to Temple by what he had himself seen in the United Provinces. The original Assembly of the States-General consisted, as he tells us, of above eight hundred persons. But this great body was represented by a smaller council of about thirty, which bore the name and exercised the powers of the States-General. At last the real States altogether ceased to meet; and their power, though still a part of the theory of the Constitution, became obsolete in practice. We do not, of course, imagine that Temple either expected or wished that Parliaments should be thus disused; but he did expect, we think, that something like what had happened in Holland would happen in England, and that a large portion of the functions lately assumed by Parliament would be quietly transferred to the miniature Parliament which he proposed to create.

Had this plan, with some modifications, been tried at an earlier period, in a more composed state of the public mind, and by a better Sovereign, we are by no means certain that it would not have effected the purpose for which it was designed. The restraint imposed on the King by the Council of Thirty, whom he had himself chosen, would have been feeble indeed when compared with the restraint imposed by Parliament. But it would have been more constant.

It would have acted every year, and all the year round; and before the Revolution the sessions of Parliament were short and the recesses long. The advice of the Council would probably have prevented any very monstrous and scandalous measures; and would consequently have prevented the discontents which follow such measures, and the salutary laws which are the fruit of such discontents. We believe, for example, that the second Dutch war would never have been approved by such a Council as that which Temple proposed. We are quite certain that the shutting up of the Exchequer would never even have been mentioned in such a Council. The people, pleased to think that Lord Russell, Lord Cavendish, and Mr. Powle, unplaced and unpensioned, were daily representing their grievances, and defending their rights in the Royal presence, would not have pined quite so much for the meeting of

A smaller council.

Constant restraint.

Parliament. The Parliament, when it met, would have found fewer and less glaring abuses to attack. There would have been less misgovernment and less reform. We should not have been cursed with the Cabal, or blessed with the Habeas Corpus Act. In the meantime the Council, considered as an executive council, would, unless some at least of its powers had been delegated to a smaller body, have been feeble, dilatory, divided, unfit for everything which requires secrecy and despatch, and peculiarly unfit for the administration of war.

The Revolution put an end, in a very different way, to the long contest between the King and the Parliament. From

Predominance of the House of Commons. that time, the House of Commons has been predominant in the State.

The Cabinet has really been, from that time, a committee nominated by the Crown out of the prevailing party in Parliament. Though the minority in the Commons are constantly proposing to condemn executive measures, or to call for papers which may enable the House to sit in judgment on such measures, these propositions are scarcely ever carried; and if a proposition of this kind is carried against the Government a change of Ministry almost necessarily follows. Growing and struggling power always gives more annoyance and is more unmanageable than established power. The House of Commons gave infinitely more trouble to the Ministers of Charles the Second, than to any Ministers of later times; for, in the time of Charles the Second, the House was checking Ministers in whom it did not confide. Now that its ascendancy is fully established, it either confides in Ministers or turns them out. This is undoubtedly a far better state of things than that which Temple wished to introduce. The modern Cabinet is a far better Executive Council than his. The worst House of Commons that has sate since the Revolution was a far more efficient check on misgovernment than his fifteen independent councillors would have been. Yet, everything considered, it seems to us that his plan was the work of an observant, ingenious, and fertile mind.

On this occasion, as on every occasion on which he came prominently forward,

Temple's good fortune. Temple had the rare good fortune to please the public as well as the Sovereign. The general exultation was great when it was known that the old Council,

made up of the most odious tools of power, was dismissed—that small interior committees, rendered odious by the recent memory of the Cabal, were to be disused—and that the King would adopt no measure till it had been discussed and approved by a body, of which one-half consisted of independent gentlemen and noblemen, and in which such persons as Russell, Cavendish, and Temple himself had seats. Town and country were in a ferment of joy. The bells were rung, bonfires were lighted, and the acclamations of England were re-echoed by the Dutch, who considered the influence obtained by Temple as a certain omen of good for Europe. It is, indeed, much to the honour of his sagacity that every one of his great measures should, in such times, have pleased every party which he had any interest in pleasing. This was the case with the Triple Alliance—with the Treaty which concluded the second Dutch war—with the Marriage of the Prince of Orange—and, finally, with the institution of this new Council.

The only people who grumbled were those popular leaders of the House of Commons who were not among the thirty; and, if our view of the measure be correct, they were precisely the people who had good reason to grumble. They were precisely the people whose activity and whose influence the new Council was intended to destroy.

The only grumblers.

But there was very soon an end of the bright hopes and loud applauses with which the publication of this scheme had been hailed. The perfidious levity of the King and the ambition of the chiefs of parties produced the instant, entire, and irremediable failure of a plan which nothing but firmness, public spirit, and self-denial on the part of all concerned in it could conduct to a happy issue. Even before the project was divulged, its author had already found reason to apprehend that it would fail. Considerable difficulty was experienced in framing the list of councillors. There were two men in particular about whom the King and Temple could not agree—two men deeply tainted with the vices common to the English statesmen of that age, but unrivalled in talents, address, and influence. These were the Earl of Shaftesbury and George Saville Viscount Halifax.

It was a favourite exercise among the

Greek sophists to write panegyrics on characters proverbial for depravity. One professor of rhetoric sent to Socrates a panegyric on Busiris; and Isocrates himself wrote another which has come down to us. It is, we presume, from an ambition of the same kind that some writers have lately shown a disposition to eulogize Shaftesbury. But the attempt is vain. The charges against him rest on evidence not to be invalidated by any arguments which human wit can devise; or by any information which may be found in old trunks and escrutoires.

It is certain that, just before the Restoration, he declared to the Regicides that he would be damned, body and soul, rather than suffer a hair of their heads to be hurt; and that, just after the Restoration, he was one of the judges who sentenced them to death. It is certain that he was a principal member of the most profligate Administration ever known;

**Charges
against
Shaftesbury.**

and that he was afterwards a principal member of the most profligate Opposition ever known.

It is certain that, in power, he did not scruple to violate the great fundamental principle of the Constitution, in order to exalt the Catholics; and that, out of power, he did not scruple to violate every principle of justice in order to destroy them. There were in that age honest men—William Penn is an instance—who valued toleration so highly, that they would willingly have seen it established, even by an illegal exertion of the prerogative. There were many honest men who dreaded arbitrary power so much, that, on account of the alliance between Popery and arbitrary power, they were disposed to grant no toleration to Papists. On both those classes we look with indulgence, though we think both in the wrong. But Shaftesbury belonged to neither class. He united all that was worst in both. From the friends of toleration he borrowed their contempt for the Constitution; and from the friends of liberty their contempt for the rights of conscience. We never can admit that his conduct as a member of the Cabal, was redeemed by his conduct as a leader of Opposition. On the contrary, his life was such, that every part of it, as if by a skilful contrivance, reflects infamy on every other. We should never have known how abandoned a prostitute he was in place, if we had not known how desperate an incendiary he

was out of it. To judge of him fairly, we must bear in mind that the Shaftesbury who, in office, was the chief author of the Declaration of Indulgence, was the same Shaftesbury who, out of office, excited and kept up the savage hatred of the rabble of London, against the very class to whom that Declaration of Indulgence was intended to give illegal relief.

It is amusing to see the excuses that are made for him. We will give two specimens. It is acknowledged that he was one of the Ministry which made the alliance with France against Holland, and that this alliance was most pernicious. What, then, is the defence? Even this—**Shaftesbury's defence.** that he betrayed his

master's counsels to the Electors of Saxony and Brandenburg, and tried to rouse all the Protestant powers of Germany to defend the States. Again, it is acknowledged that he was deeply concerned in the Declaration of Indulgence, and that his conduct on this occasion was not only unconstitutional, but quite inconsistent with the course which he afterwards took respecting the professors of the Catholic faith. What, then, is the defence? Even this—that he meant only to allure concealed Papists to avow themselves, and thus to become open marks for the vengeance of the public. As soon as he is charged with one treason, his advocates vindicate him by confessing two. They had better leave him where they find him. For him there is no escape upwards. Every outlet by which he can creep out of his present position, is one which lets him down into a still lower and fouler depth of infamy. To whitewash an Ethiopian is a proverbially hopeless attempt; but to whitewash an Ethiopian by giving him a new coat of blacking, is an enterprise more extraordinary still. That in the course of Shaftesbury's unscrupulous and revengeful opposition to the Court he rendered one or two most useful services to his country we admit. And, he is, we think, fairly entitled, if that be any glory, to have his name eternally associated with the Habeas Corpus Act in the same way in which the name of Henry the Eighth is associated with the reformation of the Church, and that of Jack Wilkes with the freedom of the press.

While Shaftesbury was still living, his character was elaborately drawn by two of the greatest writers of the age,—by Butler, with characteristic brilliancy of

wit,—by Dryden, with even more than characteristic energy and loftiness,—by both with all the inspiration of hatred. The sparkling illustrations of Butler have been thrown into the shade by the brighter glory of that gorgeous satiric Muse, who comes sweeping by in sceptred pall, borrowed from her more august sisters. But the descriptions well deserve to be compared. The reader will at once perceive a considerable difference between Butler's

“politician,
With more heads than a beast in vision,”

and the Ahithophel of Dryden. Butler dwells on Shaftesbury's unprincipled versatility; on his wonderful and almost instinctive skill in discerning the approach of a change of fortune; and in the dexterity with which he extricated himself from the snares in which he left his associates to perish.

“Our state-artificer foresaw
Which way the world began to draw.
For as old sinners have all points
O' th' compass in their bones and joints,
Can by their pangs and aches find
All turns and changes of the wind,
And better than by Napier's bones
Feel in their own the age of moons:
So guilty sinners in a state
Can by their crimes prognosticate,
And in their consciences feel pain
Some days before a shower of rain.
He, therefore, wisely cast about
All ways he could to ensure his throat.”

In Dryden's great portrait, on the contrary, violent passion, implacable revenge, boldness amounting to temerity, are the most striking features. Ahithophel is one of the “great wits to madness near allied.” And again—

“A daring pilot in extremity,
Pleased with the danger when the waves
went high,
He sought the storms; but, for a calm unfit,
Would steer too nigh the sands to boast his
wit.”*

* It has never, we believe, been remarked, that two of the most striking lines in the description of Ahithophel are borrowed, and from a most obscure quarter. In Knolles's “History of the Turks,” printed more than sixty years before the appearance of Absalom and Ahithophel, are the following verses, under a portrait of the Sultan Mustapha I.,—

“Greatness on goodness loves to slide, not
stand,
And leaves for Fortune's ice Vertue's firme
land.”

The dates of the two poems will, we think, explain this discrepancy. The third part of *Hudibras* appeared in 1678, when the character of Shaftesbury

Discrepancy explained.

had as yet but imperfectly developed itself. He had, indeed, been a traitor to every party in the State; but his treasons had hitherto prospered. Whether it were accident or sagacity, he had timed his desertions in such a manner that fortune seemed to go to and fro with him from side to side. The extent of his perfidy was known; but it was not till the Popish Plot furnished him with a machinery which seemed sufficiently powerful for all his purposes, that the audacity of his spirit, and the fierceness of his malevolent passions, became fully manifest. His subsequent conduct showed undoubtedly great ability, but not ability of the sort for which he had formerly been so eminent. He was now headstrong, sanguine, full of impetuous confidence in his own wisdom and his own good luck. He whose fame as a political tactician had hitherto rested chiefly on his skilful retreats, now set himself to break down all the bridges behind him. His plans were castles in the air:—his talk was rhodomontade. He took no thought for the morrow:—he treated the Court as if the King were already a prisoner in his hands:—he built on the favour of the multitude, as if that favour were not proverbially inconstant. The signs of the coming re-action were discerned by men of far less sagacity than his; and scared from his side men more consistent than he had ever pretended to be. But on him they were lost. The counsel of Ahithophel,—that counsel which was as if a man had inquired of the oracle of God,—was turned into foolishness. He who had become a by-word for the certainty with which he foresaw, and the suppleness with which he evaded danger, now when beset on every side with snares and death, seemed

Dryden's words are—

“But wild Ambition loves to slide, not stand,
And Fortune's ice prefers to Vertue's land.”

The circumstance is the more remarkable, because Dryden has really no couplet more intensely Drydenian, both in thought and expression, than this, of which the whole thought, and almost the whole expression, are stolen.

As we are on this subject, we cannot refrain from observing that Mr. Courtenay has done Dryden injustice, by inadvertently attributing to him some feeble lines which are in Tate's part of Absalom and Ahithophel.
