

of the planets, and that the deflection of Neptune and its satellite was becoming now of an unprecedented kind.

Few people without a training in science can realise the huge isolation of the solar system. The sun with its specks of planets, its dust of planetoids, and its impalpable comets, swims in a vacant immensity that almost defeats the imagination. Beyond the orbit of Neptune there is space, vacant so far as human observation has penetrated, without warmth or light or sound, blank emptiness, for twenty million times a million miles. That is the smallest estimate of the distance to be traversed before the very nearest of the stars is attained. And, saving a few comets more unsubstantial than the thinnest flame, no matter had ever to human knowledge crossed this gulf of space, until early in the twentieth century this strange wanderer appeared. A vast mass of matter it was, bulky, heavy, rushing without warning out of the black mystery of the sky into the radiance of the sun. By the second day it was clearly visible to any decent instrument, as a speck with a barely sensible diameter, in the constellation Leo near Regulus. In a little while an opera glass could attain it.

On the third day of the new year the newspaper readers of two hemispheres were made aware for the first time of the real importance of this unusual apparition in the heavens. "A Planetary Collision," one London paper headed the news, and proclaimed Duchaine's opinion that this strange new planet would probably collide with Neptune. The leader writers enlarged upon the topic. So that in most of the capitals of the world, on January 3rd, there was an expectation, however vague, of some imminent phenomenon in the sky; and as the night followed the sunset round the globe, thousands of men turned their eyes skyward to see—the old familiar stars just as they had always been.

Until it was dawn in London and Pollux setting and

the stars overhead grown pale. The winter's dawn it was, a sickly filtering accumulation of daylight, and the light of gas and candles shone yellow in the windows to show where people were astir. But the yawning policeman saw the thing, the busy crowds in the markets stopped agape, workmen going to their work betimes, milkmen, the drivers of news-carts, dissipation going home jaded and pale, homeless wanderers, sentinels on their beats, and in the country, labourers trudging afield, poachers slinking home, all over the dusky quickening country it could be seen—and out at sea by seamen watching for the day—a great white star, come suddenly into the westward sky!

Brighter it was than any star in our skies; brighter than the evening star at its brightest. It still glowed out white and large, no mere twinkling spot of light, but a small round clear shining disc, an hour after the day had come. And where science has not reached, men stared and feared, telling one another of the wars and pestilences that are foreshadowed by these fiery signs in the Heavens. Sturdy Boers, dusky Hottentots, Gold Coast negroes, Frenchmen, Spaniards, Portuguese, stood in the warmth of the sunrise watching the setting of this strange new star.

And in a hundred observatories there had been suppressed excitement, rising almost to shouting pitch, as the two remote bodies had rushed together, and a hurrying to and fro to gather photographic apparatus and spectroscope, and this appliance and that, to record this novel astonishing sight, the destruction of a world. For it was a world, a sister planet of our earth, far greater than our earth indeed, that had so suddenly flashed into flaming death. Neptune it was, had been struck, fairly and squarely, by the strange planet from outer space and the heat of the concussion had incontinently turned two solid globes into one vast mass of incandescence. Round the world that day, two hours before the dawn, went the pallid great white star,

fading only as it sank westward and the sun mounted above it. Everywhere men marvelled at it, but of all those who saw it none could have marvelled more than those sailors, habitual watchers of the stars, who far away at sea had heard nothing of its advent and saw it now rise like a pigmy moon and climb zenithward and hang overhead and sink westward with the passing of the night.

And when next it rose over Europe everywhere were crowds of watchers on hilly slopes, on house-roofs, in open spaces, staring eastward for the rising of the great new star. It rose with a white glow in front of it, like the glare of a white fire, and those who had seen it come into existence the night before cried out at the sight of it. "It is larger," they cried. "It is brighter!" And, indeed the moon a quarter full and sinking in the west was in its apparent size beyond comparison, but scarcely in all its breadth had it as much brightness now as the little circle of the strange new star.

"It is brighter!" cried the people clustering in the streets. But in the dim observatories the watchers held their breath and peered at one another. "*It is nearer,*" they said. "*Nearer!*"

And voice after voice repeated, "It is nearer," and the clicking telegraph took that up, and it trembled along telephone wires, and in a thousand cities grimy compositors fingered the type. "It is nearer." Men writing in offices, struck with a strange realisation, flung down their pens; men talking in a thousand places suddenly came upon a grotesque possibility in those words, "It is nearer." It hurried along awakening streets, it was shouted down the frost-stilled ways of quiet villages, men who had read these things from the throbbing tape stood in yellow-lit doorways shouting the news to the passers-by. "It is nearer." Pretty women, flushed and glittering, heard the news told jestingly between the dances, and feigned an intelligent

interest they did not feel. "Nearer! Indeed. How curious! How very, very clever people must be to find out things like that!"

Lonely tramps faring through the wintry night murmured those words to comfort themselves—looking skyward. "It has need to be nearer, for the night's as cold as charity. Don't seem much warmth from it if it is nearer, all the same."

"What is a new star to me?" cried the weeping woman kneeling beside her dead.

The schoolboy, rising early for his examination work, puzzled it out for himself—with the great white star, shining broad and bright through the frost-flowers of his window. "Centrifugal, centripetal," he said, with his chin on his fist. "Stop a planet in its flight, rob it of its centrifugal force, what then? Centripetal has it, and down it falls into the sun! And this—!"

"Do *we* come in the way? I wonder—"

The light of that day went the way of its brethren, and with the later watches of the frosty darkness rose the strange star again. And it was now so bright that the waxing moon seemed but a pale yellow ghost of itself, hanging huge in the sunset. In a South African city a great man had married, and the streets were alight to welcome his return with his bride. "Even the skies have illuminated," said the flatterer. Under Capricorn, two negro lovers, daring the wild beasts and evil spirits, for love of one another, crouched together in a cane brake where the fire-flies hovered. "That is our star," they whispered, and felt strangely comforted by the sweet brilliance of its light.

The master mathematician sat in his private room and pushed the papers from him. His calculations were already finished. In a small white phial there still remained a little of the drug that had kept him awake and active for four long nights. Each day, serene, explicit, patient as ever, he had given his lecture to his students, and then had come back at once to this

momentous calculation. His face was grave, a little drawn and hectic from his drugged activity. For some time he seemed lost in thought. Then he went to the window, and the blind went up with a click. Half way up the sky, over the clustering roofs, chimneys and steeples of the city, hung the star.

He looked at it as one might look into the eyes of a brave enemy. "You may kill me," he said after a silence. "But I can hold you—and all the universe for that matter—in the grip of this little brain. I would not change. Even now."

He looked at the little phial. "There will be no need of sleep again," he said. The next day at noon, punctual to the minute, he entered his lecture theatre, put his hat on the end of the table as his habit was, and carefully selected a large piece of chalk. It was a joke among his students that he could not lecture without that piece of chalk to fumble in his fingers, and once he had been stricken to impotence by their hiding his supply. He came and looked under his grey eyebrows at the rising tiers of young fresh faces, and spoke with his accustomed studied commonness of phrasing. "Circumstances have arisen—circumstances beyond my control," he said and paused, "which will debar me from completing the course I had designed. It would seem, gentlemen, if I may put the thing clearly and briefly, that—Man has lived in vain."

The students glanced at one another. Had they heard aright? Mad? Raised eyebrows and grinning lips there were, but one or two faces remained intent upon his calm grey-fringed face. "It will be interesting," he was saying, "to devote this morning to an exposition, so far as I can make it clear to you, of the calculations that have led me to this conclusion. Let us assume—"

He turned towards the blackboard, meditating a diagram in the way that was usual to him. "What was that about 'lived in vain'?" whispered one student

to another. "Listen," said the other, nodding towards the lecturer.

And presently they began to understand.

That night the star rose later, for its proper eastward motion had carried it some way across Leo towards Virgo, and its brightness was so great that the sky became a luminous blue as it rose, and every star was hidden in its turn, save only Jupiter near the zenith, Capella, Aldebaran, Sirius and the pointers of the Bear. It was very white and beautiful. In many parts of the world that night a pallid halo encircled it about. It was perceptibly larger; in the clear refractive sky of the tropics it seemed as if it were nearly a quarter the size of the moon. The frost was still on the ground in England, but the world was as brightly lit as if it were midsummer moonlight. One could see to read quite ordinary print by that cold clear light, and in the cities the lamps burnt yellow and wan.

And everywhere the world was awake that night, and throughout Christendom a sombre murmur hung in the keen air over the country side like the belling of bees in the heather, and this murmurous tumult grew to a clangour in the cities. It was the tolling of the bells in a million belfry towers and steeples, summoning the people to sleep no more, to sin no more, but to gather in their churches and pray. And overhead, growing larger and brighter as the earth rolled on its way and the night passed, rose the dazzling star.

And the streets and houses were alight in all the cities, the shipyards glared, and whatever roads led to high country were lit and crowded all night long. And in all the seas about the civilised lands, ships with throbbing engines, and ships with bellying sails, crowded with men and living creatures, were standing out to ocean and the north. For already the warning of the master mathematician had been telegraphed all over the world, and translated into a hundred tongues. The new planet and Neptune, locked in a fiery embrace,

were whirling headlong, ever faster and faster towards the sun. Already every second this blazing mass flew a hundred miles, and every second its terrific velocity increased. As it flew now, indeed, it must pass a hundred million of miles wide of the earth and scarcely affect it. But near its destined path, as yet only slightly perturbed, spun the mighty planet Jupiter and his moons sweeping splendid round the sun. Every moment now the attraction between the fiery star and the greatest of the planets grew stronger. And the result of that attraction? Inevitably Jupiter would be deflected from his orbit into an elliptical path, and the burning star, swung by his attraction wide of its sunward rush, would "describe a curved path" and perhaps collide with, and certainly pass very close to, our earth. "Earthquakes, volcanic outbreaks, cyclones, sea waves, floods, and a steady rise in temperature to I know not what limit"—so prophesied the master mathematician.

And overhead, to carry out his words, lonely and cold and livid, blazed the star of the coming doom.

To many who stared at it that night until their eyes ached, it seemed that it was visibly approaching. And that night, too, the weather changed, and the frost that had gripped all Central Europe and France and England softened towards a thaw.

But you must not imagine because I have spoken of people praying through the night and people going aboard ships and people fleeing towards mountainous country that the whole world was already in a terror because of the star. As a matter of fact, use and wont still ruled the world, and save for the talk of idle moments and the splendour of the night, nine human beings out of ten were still busy at their common occupations. In all the cities the shops, save one here and there, opened and closed at their proper hours, the doctor and the undertaker plied their trades, the workers gathered in the factories, soldiers drilled, scholars studied, lovers sought one another, thieves lurked and

fled, politicians planned their schemes. The presses of the newspapers roared through the nights, and many a priest of this church and that would not open his holy building to further what he considered a foolish panic. The newspapers insisted on the lesson of the year 1000—for then, too, people had anticipated the end. The star was no star—mere gas—a comet; and were it a star it could not possibly strike the earth. There was no precedent for such a thing. Common sense was sturdy everywhere, scornful, jesting, a little inclined to persecute the obdurate fearful. That night, at seven-fifteen by Greenwich time, the star would be at its nearest to Jupiter. Then the world would see the turn things would take. The master mathematician's grim warnings were treated by many as so much mere elaborate self-advertisement. Common sense at last, a little heated by argument, signified its unalterable convictions by going to bed. So, too, barbarism and savagery, already tired of the novelty, went about their mighty business, and save for a howling dog here and there, the beast world left the star unheeded.

And yet, when at last the watchers in the European States saw the star rise, an hour later it is true, but no larger than it had been the night before, there were still plenty awake to laugh at the master mathematician—to take the danger as if it had passed.

But hereafter the laughter ceased. The star grew—it grew with a terrible steadiness hour after hour, a little larger each hour, a little nearer the midnight zenith, and brighter and brighter, until it had turned night into a second day. Had it come straight to the earth instead of in a curved path, had it lost no velocity to Jupiter, it must have leapt the intervening gulf in a day, but as it was it took five days altogether to come by our planet. The next night it had become a third the size of the moon before it set to English eyes, and the thaw was assured. It rose over America near the size of the moon, but blinding white to look at, and

hot; and a breath of hot wind blew now with its rising and gathering strength, and in Virginia, and Brazil, and down the St. Lawrence valley, it shone intermittently through a driving reek of thunder-clouds, flickering violet lightning, and hail unprecedented. In Manitoba was a thaw and devastating floods. And upon all the mountains of the earth the snow and ice began to melt that night, and all the rivers coming out of high country flowed thick and turbid, and soon—in their upper reaches—with swirling trees and the bodies of beasts and men. They rose steadily, steadily in the ghostly brilliance, and came trickling over their banks at last, behind the flying population of their valleys.

And along the coast of Argentina and up the South Atlantic the tides were higher than had ever been in the memory of man, and the storms drove the waters in many cases scores of miles inland, drowning whole cities. And so great grew the heat during the night that the rising of the sun was like the coming of a shadow. The earthquakes began and grew until all down America from the Arctic Circle to Cape Horn, hillsides were sliding, fissures were opening, and houses and walls crumbling to destruction. The whole side of Cotopaxi slipped out in one vast convulsion, and a tumult of lava poured out so high and broad and swift and liquid that in one day it reached the sea.

So the star, with the wan moon in its wake, marched across the Pacific, trailed the thunderstorms like the hem of a robe, and the growing tidal wave that toiled behind it, frothing and eager, poured over island and island and swept them clear of men. Until that wave came at last—in a blinding light and with the breath of a furnace, swift and terrible it came—a wall of water, fifty feet high, roaring hungrily, upon the long coasts of Asia, and swept inland across the plains of China. For a space the star, hotter now and larger and brighter than the sun in its strength, showed with

pitiless brilliance the wide and populous country; towns and villages with their pagodas and trees, roads, wide cultivated fields, millions of sleepless people staring in helpless terror at the incandescent sky; and then, low and growing, came the murmur of the flood. And thus it was with millions of men that night—a flight no-whither, with limbs heavy with heat and breath fierce and scant, and the flood like a wall swift and white behind. And then death.

China was lit glowing white, but over Japan and Java and all the islands of Eastern Asia the great star was a ball of dull red fire because of the steam and smoke and ashes the volcanoes were spouting forth to salute its coming. Above was the lava, hot gases and ash, and below the seething floods, and the whole earth swayed and rumbled with the earthquake shocks. Soon the immemorial snows of Thibet and the Himalaya were melting and pouring down by ten million deepening converging channels upon the plains of Burmah and Hindostan. The tangled summits of the Indian jungles were aflame in a thousand places, and below the hurrying waters around the stems were dark objects that still struggled feebly and reflected the blood-red tongues of fire. And in a rudderless confusion a multitude of men and women fled down the broad river-ways to that one last hope of men—the open sea.

Larger grew the star, and larger, hotter, and brighter with a terrible swiftness now. The tropical ocean had lost its phosphorescence, and the whirling steam rose in ghostly wreaths from the black waves that plunged incessantly, speckled with storm-tossed ships.

And then came a wonder. It seemed to those who in Europe watched for the rising of the star that the world must have ceased its rotation. In a thousand open spaces of down and upland the people who had fled thither from the floods and the falling houses and sliding slopes of hill watched for that rising in vain. Hour followed hour through a terrible suspense, and

the star rose not. Once again men set their eyes upon the old constellations they had counted lost to them forever. In England it was hot and clear overhead, though the ground quivered perpetually, but in the tropics, Sirius and Capella and Aldebaran showed through a veil of steam. And when at last the great star rose near ten hours late, the sun rose close upon it, and in the centre of its white heart was a disc of black.

Over Asia it was the star had begun to fall behind the movement of the sky, and then suddenly, as it hung over India, its light had been veiled. All the plain of India from the mouth of the Indus to the mouths of the Ganges was a shallow waste of shining water that night, out of which rose temples and palaces, mounds and hills, black with people. Every minaret was a clustering mass of people, who fell one by one into the turbid waters, as heat and terror overcame them. The whole land seemed a-wailing, and suddenly there swept a shadow across that furnace of despair, and a breath of cold wind, and a gathering of clouds, out of the cooling air. Men looking up, near blinded, at the star, saw that a black disc was creeping across the light. It was the moon, coming between the star and the earth. And even as men cried to God at this respite, out of the East with a strange inexplicable swiftness sprang the sun. And then star, sun and moon rushed together across the heavens.

So it was that presently, to the European watchers, star and sun rose close upon each other, drove headlong for a space and then slower, and at last came to rest, star and sun merged into one glare of flame at the zenith of the sky. The moon no longer eclipsed the star but was lost to sight in the brilliance of the sky. And though those who were still alive regarded it for the most part with that dull stupidity that hunger, fatigue, heat and despair engender, there were still men who could perceive the meaning of these signs. Star and earth had been at their nearest, had swung about

one another, and the star had passed. Already it was receding, swifter and swifter, in the last stage of its headlong journey downward into the sun.

And then the clouds gathered, blotting out the vision of the sky, the thunder and lightning wove a garment round the world; all over the earth was such a down-pour of rain as men had never before seen, and where the volcanoes flared red against the cloud canopy there descended torrents of mud. Everywhere the waters were pouring off the land, leaving mud-silted ruins, and the earth littered like a storm-worn beach with all that had floated, and the dead bodies of the men and brutes, its children. For days the water streamed off the land, sweeping away soil and trees and houses in the way, and piling huge dykes and scooping out Titanic gullies over the country side. Those were the days of darkness that followed the star and the heat. All through them, and for many weeks and months, the earthquakes continued.

But the star had passed, and men, hunger-driven and gathering courage only slowly, might creep back to their ruined cities, buried granaries, and sodden fields. Such few ships as had escaped the storms of that time came stunned and shattered and sounding their way cautiously through the new marks and shoals of once familiar ports. And as the storms subsided men perceived that everywhere the days were hotter than of yore, and the sun larger, and the moon, shrunk to a third of its former size, took now fourscore days between its new and new.

But of the new brotherhood that grew presently among men, of the saving of laws and books and machines, of the strange change that had come over Iceland and Greenland and the shores of Baffin's Bay, so that the sailors coming there presently found them green and gracious, and could scarce believe their eyes, this story does not tell. Nor of the movement of mankind now that the earth was hotter, northward and southward towards the poles of the earth. It concerns

itself only with the coming and the passing of the Star.

The Martian astronomers—for there are astronomers on Mars, although they are very different beings from men—were naturally profoundly interested by these things. They saw them from their own standpoint of course. "Considering the mass and temperature of the missile that was flung through our solar system into the sun," one wrote, "it is astonishing what a little damage the earth, which it missed so narrowly, has sustained. All the familiar continental markings and the masses of the seas remain intact, and indeed the only difference seems to be a shrinkage of the white discoloration (supposed to be frozen water) round either pole." Which only shows how small the vastest of human catastrophes may seem, at a distance of a few million miles.

STORY THE THIRD

A Story of the Stone Age

1.—Ugh-lomi and Uya

THIS story is of a time beyond the memory of man, before the beginning of history, a time when one might have walked dryshod from France (as we call it now) to England, and when a broad and sluggish Thames flowed through its marshes to meet its father Rhine, flowing through a wide and level country that is under water in these latter days, and which we know by the name of the North Sea. In that remote age the valley which runs along the foot of the Downs did not exist, and the south of Surrey was a range of hills, fir-clad on the middle slopes, and snow-capped for the better part of the year. The cores of its summits still remain as Leith Hill, and Pitch Hill, and Hindhead. On the lower slopes of the range, below the grassy spaces where the wild horses grazed, were forests of yew and sweet-chestnut and elm, and the thickets and dark places hid the grizzly bear and the hyæna, and the grey apes clambered through the branches. And still lower amidst the woodland and marsh and open grass along

the Wey did this little drama play itself out to the end that I have to tell. Fifty thousand years ago it was, fifty thousand years—if the reckoning of geologists is correct.

And in those days the spring-time was as joyful as it is now, and sent the blood coursing in just the same fashion. The afternoon sky was blue with piled white clouds sailing through it, and the southwest wind came like a soft caress. The new-come swallows drove to and fro. The reaches of the river were spangled with white ranunculus, the marshy places were starred with lady's-smock and lit with marshmallow wherever the regiments of the sedges lowered their swords, and the northward moving hippopotami, shiny black monsters, sporting clumsily, came floundering and blundering through it all, rejoicing dimly and possessed with one clear idea, to splash the river muddy.

Up the river and well in sight of the hippopotami, a number of little buff-coloured animals dabbled in the water. There was no fear, no rivalry, and no enmity between them and the hippopotami. As the great bulks came crashing through the reeds and smashed the mirror of the water into silvery splashes, these little creatures shouted and gesticulated with glee. It was the surest sign of high spring. "Boloo!" they cried. "Baayah. Boloo!" They were the children of the men folk, the smoke of whose encampment rose from the knoll at the river's bend. Wild-eyed youngsters they were, with matted hair and little broad-nosed impish faces, covered (as some children are covered even nowadays) with a delicate down of hair. They were narrow in the loins and long in the arms. And their ears had no lobes, and had little pointed tips, a thing that still, in rare instances, survives. Stark-naked vivid little gipsies, as active as monkeys and as full of chatter, though a little wanting in words.

Their elders were hidden from the wallowing hippopotami by the crest of the knoll. The human squatting-

place was a trampled area among the dead brown fronds of Royal Fern, through which the crosiers of this year's growth were unrolling to the light and warmth. The fire was a smouldering heap of char, light grey and black, replenished by the old women from time to time with brown leaves. Most of the men were asleep—they slept sitting with their foreheads on their knees. They had killed that morning a good quarry, enough for all, a deer that had been wounded by hunting dogs; so that there had been no quarrelling among them, and some of the women were still gnawing the bones that lay scattered about. Others were making a heap of leaves and sticks to feed Brother Fire when the darkness came again, that he might grow strong and tall therewith, and guard them against the beasts. And two were piling flints that they brought, an armful at a time, from the bend of the river where the children were at play.

None of these buff-skinned savages were clothed, but some wore about their hips rude girdles of adder-skin or crackling undressed hide, from which depended little bags, not made, but torn from the paws of beasts, and carrying the rudely-dressed flints that were men's chief weapons and tools. And one woman, the mate of Uya the Cunning Man, wore a wonderful necklace of perforated fossils—that others had worn before her. Beside some of the sleeping men lay the big antlers of the elk, with the tines chipped to sharp edges, and long sticks, hacked at the ends with flints into sharp points. There was little else save these things and the smouldering fire to mark these human beings off from the wild animals that ranged the country. But Uya the Cunning did not sleep, but sat with a bone in his hand and scraped busily thereon with a flint, a thing no animal would do. He was the oldest man in the tribe, beetle-browed, prognathous, lank-armed; he had a beard and his cheeks were hairy, and his chest and arms were black with thick hair. And by virtue both of his strength and

cunning he was master of the tribe, and his share was always the most and the best.

Eudena had hidden herself among the alders, because she was afraid of Uya. She was still a girl, and her eyes were bright and her smile pleasant to see. He had given her a piece of the liver, a man's piece, and a wonderful treat for a girl to get; but as she took it the other woman with the necklace had looked at her, an evil glance, and Ugh-lomi had made a noise in his throat. At that, Uya had looked at him long and steadfastly, and Ugh-lomi's face had fallen. And then Uya had looked at her. She was frightened and she had stolen away, while the feeding was still going on, and Uya was busy with the marrow of a bone. Afterwards he had wandered about as if looking for her. And now she crouched among the alders, wondering mightily what Uya might be doing with the flint and the bone. And Ugh-lomi was not to be seen.

Presently a squirrel came leaping through the alders, and she lay so quiet the little man was within six feet of her before he saw her. Whereupon he dashed up a stem in a hurry and began to chatter and scold her. "What are you doing here," he asked, "away from the other men beasts?" "Peace," said Eudena, but he only chattered more, and then she began to break off the little black cones to throw at him. He dodged and defied her, and she grew excited and rose up to throw better, and then she saw Uya coming down the knoll. He had seen the movement of her pale arm amidst the thicket—he was very keen-eyed.

At that she forgot the squirrel and set off through the alders and reeds as fast as she could go. She did not care where she went so long as she escaped Uya. She splashed nearly knee-deep through a swampy place, and saw in front of her a slope of ferns—growing more slender and green as they passed up out of the light into the shade of the young chestnuts. She was soon amidst the trees—she was very fleet of foot, and she

ran on and on until the forest was old and the vales great, and the vines about their stems where the light came were thick as young trees, and the ropes of ivy stout and tight. On she went, and she doubled and doubled again, and then at last lay down amidst some ferns in a hollow place near a thicket, and listened with her heart beating in her ears.

She heard footsteps presently rustling among the dead leaves, far off, and they died away and everything was still again, except the scandalising of the midges—for the evening was drawing on—and the incessant whisper of the leaves. She laughed silently to think the cunning Uya should go by her. She was not frightened. Sometimes, playing with the other girls and lads, she had fled into the wood, though never so far as this. It was pleasant to be hidden and alone.

She lay a long time there, glad of her escape, and then she sat up listening.

It was a rapid pattering growing louder and coming towards her, and in a little while she could hear grunting noises and the snapping of twigs. It was a drove of lean grisly wild swine. She turned about her, for a boar is an ill fellow to pass too closely, on account of the sideway slash of his tusks, and she made off slantingly through the trees. But the patter came nearer, they were not feeding as they wandered, but going fast—or else they would not overtake her—and she caught the limb of a tree, swung on to it, and ran up the stem with something of the agility of a monkey.

Down below the sharp bristling backs of the swine were already passing when she looked. And she knew the short, sharp grunts they made meant fear. What were they afraid of? A man? They were in a great hurry for just a man.

And then, so suddenly it made her grip on the branch tighten involuntarily, a fawn started in the brake and rushed after the swine. Something else went by, low and grey, with a long body; she did not know

what it was, indeed she saw it only momentarily through the interstices of the young leaves; and then there came a pause.

She remained stiff and expectant, as rigid almost as though she was a part of the tree she clung to, peering down.

Then, far away among the trees, clear for a moment, then hidden, then visible knee-deep in ferns, then gone again, ran a man. She knew it was young Ugh-lomi by the fair colour of his hair, and there was red upon his face. Somehow his frantic flight and that scarlet mark made her feel sick. And then nearer, running heavily and breathing hard, came another man. At first she could not see, and then she saw, foreshortened and clear to her, Uya, running with great strides and his eyes staring. He was not going after Ugh-lomi. His face was white. It was Uya—*afraid!* He passed, and was still loud hearing, when something else, something large and with grizzled fur, swinging along with soft swift strides, came rushing in pursuit of him.

Eudena suddenly became rigid, ceased to breathe, her clutch convulsive, and her eyes starting.

She had never seen the thing before, she did not even see him clearly now, but she knew at once it was the Terror of the Woodshade. His name was a legend, the children would frighten one another, frighten even themselves with his name, and run screaming to the squatting-place. No man had ever killed any of his kind. Even the mighty mammoth feared his anger. It was the grizzly bear, the lord of the world as the world went then.

As he ran he made a continuous growling grumble. "Men in my very lair! Fighting and blood. At the very mouth of my lair. Men, men, men. Fighting and blood." For he was the lord of the wood and of the caves.

Long after he had passed she remained, a girl of stone, staring down through the branches. All her

power of action had gone from her. She gripped by instinct with hands and knees and feet. It was some time before she could think, and then only one thing was clear in her mind, that the Terror was between her and the tribe—that it would be impossible to descend.

Presently when her fear was a little abated she clambered into a more comfortable position, where a great branch forked. The trees rose about her, so that she could see nothing of Brother Fire, who is black by day. Birds began to stir, and things that had gone into hiding for fear of her movements crept out. . . .

After a time the taller branches flamed out at the touch of the sunset. High overhead the rooks, who were wiser than men, went cawing home to their squatting-places among the elms. Looking down, things were clearer and darker. Eudena thought of going back to the squatting-place; she let herself down some way, and then the fear of the Terror of the Woodshade came again. While she hesitated a rabbit squealed dismally, and she dared not descend farther.

The shadows gathered, and the deeps of the forest began stirring. Eudena went up the tree again to be nearer the light. Down below the shadows came out of their hiding-places and walked abroad. Overhead the blue deepened. A dreadful stillness came, and then the leaves began whispering.

Eudena shivered and thought of Brother Fire.

The shadows now were gathering in the trees, they sat on the branches and watched her. Branches and leaves were turned to ominous, quiet black shapes that would spring on her if she stirred. Then the white owl, flitting silently, came ghostly through the shades. Darker grew the world and darker, until the leaves and twigs against the sky were black, and the ground was hidden.

She remained there all night, an age-long vigil, straining her ears for the things that went on below in the darkness, and keeping motionless lest some stealthy

beast should discover her. Man in those days was never alone in the dark, save for such rare accidents as this. Age after age he had learnt the lesson of its terror—a lesson we poor children of his have nowadays painfully to unlearn. Eudena, though in age a woman, was in heart like a little child. She kept as still, poor little animal, as a hare before it is started.

The stars gathered and watched her—her one grain of comfort. In one bright one she fancied there was something like Ugh-lomi. Then she fancied it *was* Ugh-lomi. And near him, red and duller, was Uya, and as the night passed Ugh-lomi fled before him up the sky.

She tried to see Brother Fire, who guarded the squatting-place from beasts, but he was not in sight. And far away she heard the mammoths trumpeting as they went down to the drinking-place, and once some huge bulk with heavy paces hurried along, making a noise like a calf, but what it was she could not see. But she thought from the voice it was Yaaa the rhinoceros, who stabs with his nose, goes always alone, and rages without cause.

At last the little stars began to hide, and then the larger ones. It was like all the animals vanishing before the Terror. The Sun was coming, lord of the sky, as the grizzly was lord of the forest. Eudena wondered what would happen if one star stayed behind. And then the sky paled to the dawn.

When the daylight came the fear of lurking things passed, and she could descend. She was stiff, but not so stiff as you would have been, dear young lady (by virtue of your upbringing), and as she had not been trained to eat at least once in three hours, but instead had often fasted three days, she did not feel uncomfortably hungry. She crept down the tree very cautiously, and went her way stealthily through the wood, and not a squirrel sprang or deer started but the terror of the grizzly bear froze her marrow.

Her desire was now to find her people again. Her dread of Uya the Cunning was consumed by a greater dread of loneliness. But she had lost her direction. She had run heedlessly overnight, and she could not tell whether the squatting-place was sunward or where it lay. Ever and again she stopped and listened, and at last, very far away, she heard a measured chinking. It was so faint even in the morning stillness that she could tell it must be far away. But she knew the sound was that of a man sharpening a flint.

Presently the trees began to thin out, and then came a regiment of nettles barring the way. She turned aside, and then she came to a fallen tree that she knew, with a noise of bees about it. And so presently she was in sight of the knoll, very far off, and the river under it, and the children and the hippopotami just as they had been yesterday, and the thin spire of smoke swaying in the morning breeze. Far away by the river was the cluster of alders where she had hidden. And at the sight of that the fear of Uya returned, and she crept into a thicket of bracken, out of which a rabbit scuttled, and lay awhile to watch the squatting-place.

The men were mostly out of sight, saving Wau, the flint-chopper; and at that she felt safer. They were away hunting food, no doubt. Some of the women, too, were down in the stream, stooping intent, seeking mussels, crayfish, and water-snails, and at the sight of their occupation Eudena felt hungry. She rose, and ran through the fern, designing to join them. As she went she heard a voice among the bracken calling softly. She stopped. Then suddenly she heard a rustle behind her, and turning, saw Ugh-lomi rising out of the fern. There were streaks of brown blood and dirt on his face, and his eyes were fierce, and the white stone of Uya, the white Fire Stone, that none but Uya dared to touch, was in his hand. In a stride he was beside her, and gripped her arm. He swung her about, and

thrust her before him towards the woods. "Uya," he said, and waved his arms about. She heard a cry, looked back, and saw all the women standing up, and two wading out of the stream. Then came a nearer howling, and the old woman with the beard, who watched the fire on the knoll, was waving her arms, and Wau, the man who had been chipping the flint, was getting to his feet. The little children too were hurrying and shouting.

"Come!" said Ugh-lomi, and dragged her by the arm.

She still did not understand.

"Uya has called the death word," said Ugh-lomi, and she glanced back at the screaming curve of figures, and understood.

Wau and all the women and children were coming towards them, a scattered array of buff shock-headed figures, howling, leaping, and crying. Over the knoll two youths hurried. Down among the ferns to the right came a man, heading them off from the wood. Ugh-lomi left her arm, and the two began running side by side, leaping the bracken and stepping clear and wide. Eudena, knowing her fleetness and the fleetness of Ugh-lomi, laughed aloud at the unequal chase. They were an exceptionally straight-limbed couple for those days.

They soon cleared the open, and drew near the wood of chestnut-trees again—neither afraid now because neither was alone. They slackened their pace, already not excessive. And suddenly Eudena cried and swerved aside, pointing, and looking up through the tree-stems. Ugh-lomi saw the feet and legs of men running towards him. Eudena was already running off at a tangent. And as he too turned to follow her they heard the voice of Uya coming through the trees, and roaring out his rage at them.

Then terror came in their hearts, not the terror that numbs, but the terror that makes one silent and swift.

They were cut off now on two sides. They were in a sort of corner of pursuit. On the right hand, and near by them, came the men swift and heavy, with bearded Uya, antler in hand, leading them; and on the left, scattered as one scatters corn, yellow dashes among the fern and grass, ran Wau and the women; and even the little children from the shallow had joined the chase. The two parties converged upon them. Off they went, with Eudena ahead.

They knew there was no mercy for them. There was no hunting so sweet to these ancient men as the hunting of men. Once the fierce passion of the chase was lit, the feeble beginnings of humanity in them were thrown to the winds. And Uya in the night had marked Ugh-lomi with the death word. Ugh-lomi was the day's quarry, the appointed feast.

They ran straight—it was their only chance—taking whatever ground came in the way—a spread of stinging nettles, an open glade, a clump of grass out of which a hyæna fled snarling. Then woods again, long stretches of shady leaf-mould and moss under the green trunks. Then a stiff slope, tree-clad, and long vistas of trees, a glade, a succulent green area of black mud, a wide open space again, and then a clump of lacerating brambles, with beast tracks through it. Behind them the chase trailed out and scattered, with Uya ever at their heels. Eudena kept the first place, running light and with her breath easy, for Ugh-lomi carried the Fire Stone in his hand.

It told on his pace—not at first, but after a time. His footsteps behind her suddenly grew remote. Glancing over her shoulder as they crossed another open space, Eudena saw that Ugh-lomi was many yards behind her, and Uya close upon him, with antler already raised in the air to strike him down. Wau and the others were but just emerging from the shadow of the woods.

Seeing Ugh-lomi in peril, Eudena ran sideways, look-

ing back, threw up her arms and cried aloud, just as the antler flew. And young Ugh-lomi, expecting this and understanding her cry, ducked his head, so that the missile merely struck his scalp lightly, making but a trivial wound, and flew over him. He turned forthwith, the quartzite Fire Stone in both hands, and hurled it straight at Uya's body as he ran loose from the throw. Uya shouted, but could not dodge it. It took him under the ribs, heavy and flat, and he reeled and went down without a cry. Ugh-lomi caught up the antler—one tine of it was tipped with his own blood—and came running on again with a red trickle just coming out of his hair.

Uya rolled over twice, and lay a moment before he got up, and then he did not run fast. The colour of his face was changed. Wau overtook him, and then others, and he coughed and laboured in his breath. But he kept on.

At last the two fugitives gained the bank of the river, where the stream ran deep and narrow, and they still had fifty yards in hand of Wau, the foremost pursuer, the man who made the smiting stones. He carried one, a large flint, the shape of an oyster and double the size, chipped to a chisel edge, in either hand.

They sprang down the steep bank into the stream, rushed through the water, swam the deep current in two or three strokes, and came out wading again, dripping and refreshed, to clamber up the farther bank. It was undermined, and with willows growing thickly therefrom, so that it needed clambering. And while Eudena was still among the silvery branches and Ugh-lomi still in the water—for the antler had encumbered him—Wau came up against the sky on the opposite bank, and the smiting stone, thrown cunningly, took the side of Eudena's knee. She struggled to the top and fell.

They heard the pursuers shout to one another, and Ugh-lomi climbing to her and moving jerkily to mar

Wau's aim, felt the second smiting stone graze his ear, and heard the water splash below him.

Then it was Ugh-lomi, the stripling, proved himself to have come to man's estate. For running on, he found Eudena fell behind, limping, and at that he turned, and crying savagely and with a face terrible with sudden wrath and trickling blood, ran swiftly past her back to the bank, whirling the antler round his head. And Eudena kept on, running stoutly still, though she must needs limp at every step, and the pain was already sharp.

So that Wau, rising over the edge and clutching the straight willow branches, saw Ugh-lomi towering over him, gigantic against the blue; saw his whole body swing round, and the grip of his hands upon the antler. The edge of the antler came sweeping through the air, and he saw no more. The water under the osiers whirled and eddied and went crimson six feet down the stream. Uya following stopped knee-high across the stream, and the man who was swimming turned about.

The other men who trailed after—they were none of them very mighty men (for Uya was more cunning than strong, brooking no sturdy rivals)—slackened momentarily at the sight of Ugh-lomi standing there above the willows, bloody and terrible, between them and the halting girl, with the huge antler waving in his hand. It seemed as though he had gone into the water a youth, and come out of it a man full grown.

He knew what there was behind him. A broad stretch of grass, and then a thicket, and in that Eudena could hide. That was clear in his mind, though his thinking powers were too feeble to see what should happen thereafter. Uya stood knee-deep, undecided and unarmed. His heavy mouth hung open, showing his canine teeth, and he panted heavily. His side was flushed and bruised under the hair. The other man beside him carried a sharpened stick. The rest of the

hunters came up one by one to the top of the bank, hairy, long-armed men clutching flints and sticks. Two ran off along the bank down stream, and then clambered to the water, where Wau had come to the surface struggling weakly. Before they could reach him he went under again. Two others threatened Ugh-lomi from the bank.

He answered back, shouts, vague insults, gestures. Then Uya, who had been hesitating, roared with rage, and whirling his fists plunged into the water. His followers splashed after him.

Ugh-lomi glanced over his shoulder and found Eudena already vanished into the thicket. He would perhaps have waited for Uya, but Uya preferred to spar in the water below him until the others were beside him. Human tactics in those days, in all serious fighting, were the tactics of the pack. Prey that turned at bay they gathered around and rushed. Ugh-lomi felt the rush coming, and hurling the antler at Uya, turned about and fled.

When he halted to look back from the shadow of the thicket, he found only three of his pursuers had followed him across the river, and they were going back again. Uya, with a bleeding mouth, was on the farther side of the stream again, but lower down, and holding his hand to his side. The others were in the river dragging something to shore. For a time at least the chase was intermitted.

Ugh-lomi stood watching for a space, and snarled at the sight of Uya. Then he turned and plunged into the thicket.

In a minute, Eudena came hastening to join him, and they went on hand in hand. He dimly perceived the pain she suffered from the cut and bruised knee, and chose the easier ways. But they went on all that day, mile after mile, through wood and thicket, until at last they came to the chalk land, open grass with rare woods of beech, and the birch growing near water,

and they saw the Wealden mountains nearer, and groups of horses grazing together. They went circumspectly, keeping always near thicket and cover, for this was a strange region—even its ways were strange. Steadily the ground rose, until the chestnut forests spread wide and blue below them, and the Thames marshes shone silvery, high and far. They saw no men, for in those days men were still only just come into this part of the world, and were moving but slowly along the river-ways. Towards evening they came on the river again, but now it ran in a gorge, between high cliffs of white chalk that sometimes overhung it. Down the cliffs was a scrub of birches and there were many birds there. And high up the cliff was a little shelf by a tree, whereon they clambered to pass the night.

They had had scarcely any food; it was not the time of year for berries, and they had no time to go aside to snare or waylay. They tramped in a hungry weary silence, gnawing at twigs and leaves. But over the surface of the cliffs were a multitude of snails, and in a bush were the freshly laid eggs of a little bird, and then Ugh-lomi threw at and killed a squirrel in a beech-tree, so that at last they fed well. Ugh-lomi watched during the night, his chin on his knees; and he heard young foxes crying hard by, and the noise of mammoths down the gorge, and the hyænas yelling and laughing far away. It was chilly, but they dared not light a fire. Whenever he dozed, his spirit went abroad, and straightway met with the spirit of Uya, and they fought. And always Ugh-lomi was paralysed so that he could not smite nor run, and then he would awake suddenly. Eudena, too, dreamt evil things of Uya, so that they both awoke with the fear of him in their hearts, and by the light of the dawn they saw a woolly rhinoceros go blundering down the valley.

During the day they caressed one another and were glad of the sunshine, and Eudena's leg was so stiff she sat on the ledge all day. Ugh-lomi found great flints

sticking out of the cliff face, greater than any he had seen, and he dragged some to the ledge and began chipping, so as to be armed against Uya when he came again. And at one he laughed heartily, and Eudena laughed, and they threw it about in derision. It had a hole in it. They stuck their fingers through it, it was very funny indeed. Then they peeped at one another through it. Afterwards, Ugh-lomi got himself a stick, and thrusting by chance at this foolish flint, the stick went in and stuck there. He had rammed it in too tightly to withdraw it. That was still stranger—scarcely funny, terrible almost, and for a time Ugh-lomi did not greatly care to touch the thing. It was as if the flint had bit and held with its teeth. But then he got familiar with the odd combination. He swung it about, and perceived that the stick with the heavy stone on the end struck a better blow than anything he knew. He went to and fro swinging it, and striking with it; but later he tired of it and threw it aside. In the afternoon he went up over the brow of the white cliff, and lay watching by a rabbit-warren until the rabbits came out to play. There were no men thereabouts, and the rabbits were heedless. He threw a smiting stone he had made and got a kill.

That night they made a fire from flint sparks and bracken fronds, and talked and caressed by it. And in their sleep Uya's spirit came again, and suddenly, while Ugh-lomi was trying to fight vainly, the foolish flint on the stick came into his hand, and he struck Uya with it, and behold! it killed him. But afterwards came other dreams of Uya—for spirits take a lot of killing, and he had to be killed again. Then after that the stone would not keep on the stick. He awoke tired and rather gloomy, and was sulky all the forenoon, in spite of Eudena's kindliness, and instead of hunting he sat chipping a sharp edge to the singular flint, and looking strangely at her. Then he bound the

perforated flint on to the stick with strips of rabbit skin. And afterwards he walked up and down the ledge, striking with it, and muttering to himself, and thinking of Uya. It felt very fine and heavy in the hand.

Several days, more than there was any counting in those days, five days, it may be, or six, did Ugh-lomi and Eudena stay on that shelf in the gorge of the river, and they lost all fear of men, and their fire burnt redly of a night. And they were very merry together; there was food every day, sweet water, and no enemies. Eudena's knee was well in a couple of days, for those ancient savages had quick-healing flesh. Indeed, they were very happy.

On one of those days Ugh-lomi dropped a chunk of flint over the cliff. He saw it fall, and go bounding across the river bank into the river, and after laughing and thinking it over a little he tried another. This smashed a bush of hazel in the most interesting way. They spent all the morning dropping stones from the ledge, and in the afternoon they discovered this new and interesting pastime was also possible from the cliff-brow. The next day they had forgotten this delight. Or at least, it seemed they had forgotten.

But Uya came in dreams to spoil the paradise. Three nights he came fighting Ugh-lomi. In the morning after these dreams Ugh-lomi would walk up and down, threatening him and swinging the axe, and at last came the night after Ugh-lomi brained the otter, and they had feasted. Uya went too far. Ugh-lomi awoke, scowling under his heavy brows, and he took his axe, and extending his hand towards Eudena he bade her wait for him upon the ledge. Then he clambered down the white declivity, glanced up once from the foot of it and flourished his axe, and without looking back again went striding along the river bank until the overhanging cliff at the bend hid him.

Two days and nights did Eudena sit alone by the

fire on the ledge waiting, and in the night the beasts howled over the cliffs and down the valley, and on the cliff over against her the hunched hyænas prowled black against the sky. But no evil thing came near her save fear. Once, far away, she heard the roaring of a lion, following the horses as they came northward over the grass lands with the spring. All that time she waited—the waiting that is pain.

And the third day Ugh-lomi came back, up the river. The plumes of a raven were in his hair. The first axe was red-stained, and had long dark hairs upon it, and he carried the necklace that had marked the favourite of Uya in his hand. He walked in the soft places, giving no heed to his trail. Save a raw cut below his jaw there was not a wound upon him. "Uya!" cried Ugh-lomi exultant, and Eudena saw it was well. He put the necklace on Eudena, and they ate and drank together. And after eating he began to rehearse the whole story from the beginning, when Uya had cast his eyes on Eudena, and Uya and Ugh-lomi, fighting in the forest, had been chased by the bear, eking out his scanty words with abundant pantomime, springing to his feet and whirling the stone axe round when it came to the fighting. The last fight was a mighty one, stamping and shouting, and once a blow at the fire that sent a torrent of sparks up into the night. And Eudena sat red in the light of the fire, gloating on him, her face flushed and her eyes shining, and the necklace Uya had made about her neck. It was a splendid time, and the stars that look down on us looked down on her, our ancestor—who has been dead now these fifty thousand years.

II.—*The Cave Bear*

In the days when Eudena and Ugh-lomi fled from the people of Uya towards the fir-clad mountains of the Weald, across the forests of sweet chestnut and the

grass-clad chalkland, and hid themselves at last in the gorge of the river between the chalk cliffs, men were few and their squatting-places far between. The nearest men to them were those of the tribe, a full day's journey down the river, and up the mountains there were none. Man was indeed a newcomer to this part of the world in that ancient time, coming slowly along the rivers, generation after generation, from one squatting-place to another, from the south-westward. And the animals that held the land, the hippopotamus and rhinoceros of the river valleys, the horses of the grass plains, the deer and swine of the woods, the grey apes in the branches, the cattle of the uplands, feared him but little—let alone the mammoths in the mountains and the elephants that came through the land in the summer-time out of the south. For why should they fear him, with but the rough, chipped flints that he had not learnt to haft and which he threw but ill, and the poor spear of sharpened wood, as all the weapons he had against hoof and horn, tooth and claw?

Andoo, the huge cave bear, who lived in the cave up the gorge, had never even seen a man in all his wise and respectable life, until midway through one night, as he was prowling down the gorge along the cliff edge, he saw the glare of Eudena's fire upon the ledge, and Eudena red and shining, and Ugh-lomi, with a gigantic shadow mocking him upon the white cliff, going to and fro, shaking his mane of hair, and waving the axe of stone—the first axe of stone—while he chanted of the killing of Uya. The cave bear was far up the gorge, and he saw the thing slanting-ways and far off. He was so surprised he stood quite still upon the edge, sniffing the novel odour of burning bracken, and wondering whether the dawn was coming up in the wrong place.

He was the lord of the rocks and caves, was the cave bear, as his slighter brother, the grizzly, was lord

of the thick woods below, and as the dappled lion—the lion of those days was dappled—was lord of the thorn-thickets, reed-beds, and open plains. He was the greatest of all meat-eaters; he knew no fear, none preyed on him, and none gave him battle; only the rhinoceros was beyond his strength. Even the mammoth shunned his country. This invasion perplexed him. He noticed these new beasts were shaped like monkeys, and sparsely hairy like young pigs. "Monkey and young pig," said the cave bear. "It might not be so bad. But that red thing that jumps, and the black thing jumping with it yonder! Never in my life have I seen such things before!"

He came slowly along the brow of the cliff towards them, stopping thrice to sniff and peer, and the reek of the fire grew stronger. A couple of hyænas also were so intent upon the thing below that Andoo, coming soft and easy, was close upon them before they knew of him or he of them. They started guiltily and went lurching off. Coming round in a wheel, a hundred yards off, they began yelling and calling him names to revenge themselves for the start they had had. "Ya-ha!" they cried. "Who can't grub his own burrow? Who eats roots like a pig? . . . Ya-ha!" for even in those days the hyæna's manners were just as offensive as they are now.

"Who answers the hyæna?" growled Andoo, peering through the midnight dimness at them, and then going to look at the cliff edge.

There was Ugh-lomi still telling his story, and the fire getting low, and the scent of the burning hot and strong.

Andoo stood on the edge of the chalk cliff for some time, shifting his vast weight from foot to foot, and swaying his head to and fro, with his mouth open, his ears erect and twitching, and the nostrils of his big, black muzzle sniffing. He was very curious, was the cave bear, more curious than any of the bears

that live now, and the flickering fire and the incomprehensible movements of the man, let alone the intrusion into his indisputable province, stirred him with a sense of strange new happenings. He had been after red deer fawn that night, for the cave bear was a miscellaneous hunter, but this quite turned him from that enterprise.

“Ya-ha!” yelled the hyænas behind. “Ya-ha-ha!”

Peering through the starlight, Andoo saw there were now three or four going to and fro against the grey hillside. “They will hang about me now all the night . . . until I kill,” said Andoo. “Filth of the world!” And mainly to annoy them, he resolved to watch the red flicker in the gorge until the dawn came to drive the hyæna scum home. And after a time they vanished, and he heard their voices, like a party of Cockney beanfeasters, away in the beech-woods. Then they came slinking near again. Andoo yawned and went on along the cliff, and they followed. Then he stopped and went back.

It was a splendid night, beset with shining constellations, the same stars, but not the same constellations we know, for since those days all the stars have had time to move into new places. Far away across the open space beyond where the heavy-shouldered, lean-bodied hyænas blundered and howled, was a beechwood, and the mountain slopes rose beyond, a dim mystery, until their snow-capped summits came out white and cold and clear, touched by the first rays of the yet unseen moon. It was a vast silence, save when the yell of the hyænas flung a vanishing discordance across its peace, or when from down the hills the trumpeting of the new-come elephants came faintly on the faint breeze. And below now, the red flicker had dwindled and was steady, and shone a deeper red, and Ugh-lomi had finished his story and was preparing to sleep, and Eudena sat and listened to the strange voices of unknown beasts, and watched the dark eastern

sky growing deeply luminous at the advent of the moon. Down below, the river talked to itself, and things unseen went to and fro.

After a time the bear went away, but in an hour he was back again. Then, as if struck by a thought, he turned, and went up the gorge. . . .

The night passed, and Ugh-lomi slept on. The waning moon rose and lit the gaunt white cliff overhead with a light that was pale and vague. The gorge remained in a deeper shadow and seemed all the darker. Then by imperceptible degrees, the day came stealing in the wake of the moonlight. Eudena's eyes wandered to the cliff brow overhead once, and then again. Each time the line was sharp and clear against the sky, and yet she had a dim perception of something lurking there. The red of the fire grew deeper and deeper, grey scales spread upon it, its vertical column of smoke became more and more visible, and up and down the gorge things that had been unseen grew clear in a colourless illumination. She may have dozed.

Suddenly she started up from her squatting position, erect and alert, scrutinising the cliff up and down.

She made the faintest sound, and Ugh-lomi too, light-sleeping like an animal, was instantly awake. He caught up his axe and came noiselessly to her side.

The light was still dim, the world now all in black and dark grey, and one sickly star still lingered overhead. The ledge they were on was a little grassy space, six feet wide, perhaps, and twenty feet long, sloping outwardly, and with a handful of St. John's wort growing near the edge. Below it the soft, white rock fell away in a steep slope of nearly fifty feet to the thick bush of hazel that fringed the river. Down the river this slope increased, until some way off a thin grass held its own right up to the crest of the cliff. Overhead, forty or fifty feet of rock bulged into the great masses characteristic of chalk, but at the

end of the ledge a gully, a precipitous groove of discoloured rock, slashed the face of the cliff, and gave a footing to a scrubby growth, by which Eudena and Ugh-lomi went up and down.

They stood as noiseless as startled deer, with every sense expectant. For a minute they heard nothing, and then came a faint rattling of dust down the gully, and the creaking of twigs.

Ugh-lomi gripped his axe, and went to the edge of the ledge, for the bulge of the chalk overhead had hidden the upper part of the gully. And forthwith, with a sudden contraction of the heart, he saw the cave bear half-way down from the brow, and making a gingerly backward step with his flat hind-foot. His hind-quarters were towards Ugh-lomi, and he clawed at the rocks and bushes so that he seemed flattened against the cliff. He looked none the less for that. From his shining snout to his stumpy tail he was a lion and a half, the length of two tall men. He looked over his shoulder, and his huge mouth was open with the exertion of holding up his great carcase, and his tongue lay out. . . .

He got his footing, and came down slowly, a yard nearer.

"Bear," said Ugh-lomi, looking round with his face white.

But Eudena, with terror in her eyes, was pointing down the cliff.

Ugh-lomi's mouth fell open. For down below, with her big fore-feet against the rock, stood another big brown-grey bulk—the she-bear. She was not so big as Andoo, but she was big enough for all that.

Then suddenly Ugh-lomi gave a cry, and catching up a handful of the litter of ferns that lay scattered on the ledge, he thrust it into the pallid ash of the fire. "Brother Fire!" he cried, "Brother Fire!" And Eudena, starting into activity, did likewise. "Brother Fire! Help, help! Brother Fire!"

Brother Fire was still red in his heart, but he turned to grey as they scattered him. "Brother Fire!" they screamed. But he whispered and passed, and there was nothing but ashes. Then Ugh-lomi danced with anger and struck the ashes with his fist. But Eudena began to hammer the firestone against a flint. And the eyes of each were turning ever and again towards the gully by which Andoo was climbing down. Brother Fire!

Suddenly the huge furry hind-quarters of the bear came into view, beneath the bulge of the chalk that had hidden him. He was still clambering gingerly down the nearly vertical surface. His head was yet out of sight, but they could hear him talking to himself. "Pig and monkey," said the cave bear. "It ought to be good."

Eudena struck a spark and blew at it; it twinkled brighter and then—went out. At that she cast down flint and firestone and stared blankly. Then she sprang to her feet and scrambled a yard or so up the cliff above the ledge. How she hung on even for a moment I do not know, for the chalk was vertical and without grip for a monkey. In a couple of seconds she had slid back to the ledge again with bleeding hands.

Ugh-lomi was making frantic rushes about the ledge—now he would go to the edge, now to the gully. He did not know what to do, he could not think. The she-bear looked smaller than her mate—much. If they rushed down on her together, *one* might live. "Ugh?" said the cave bear, and Ugh-lomi turned again and saw his little eyes peering under the bulge of the chalk.

Eudena, cowering at the end of the ledge, began to scream like a gripped rabbit.

At that a sort of madness came upon Ugh-lomi. With a mighty cry, he caught up his axe and ran towards Andoo. The monster gave a grunt of surprise. In a moment Ugh-lomi was clinging to a bush right

underneath the bear, and in another he was hanging to its back half buried in fur, with one fist clutched in the hair under its jaw. The bear was too astonished at this fantastic attack to do more than cling passive. And then the axe, the first of all axes, rang on its skull.

The bear's head twisted from side to side, and he began a petulant scolding growl. The axe bit within an inch of the left eye, and the hot blood blinded that side. At that the brute roared with surprise and anger, and his teeth gnashed six inches from Ugh-lomi's face. Then the axe, clubbed close, came down heavily on the corner of the jaw.

The next blow blinded the right side and called forth a roar, this time of pain. Eudena saw the huge, flat feet slipping and sliding, and suddenly the bear gave a clumsy leap sideways, as if for the ledge. Then everything vanished, and the hazels smashed, and a roar of pain and a tumult of shouts and growls came up from far below.

Eudena screamed and ran to the edge and peered over. For a moment, man and bears were a heap together, Ugh-lomi uppermost; and then he had sprung clear and was scaling the gully again, with the bears rolling and striking at one another among the hazels. But he had left his axe below, and three knob-ended streaks of carmine were shooting down his thigh. "Up!" he cried, and in a moment Eudena was leading the way to the top of the cliff.

In half a minute they were at the crest, their hearts pumping noisily, with Andoo and his wife far and safe below them. Andoo was sitting on his haunches, both paws at work, trying with quick exasperated movements to wipe the blindness out of his eyes, and the she-bear stood on all-fours a little way off, ruffled in appearance and growling angrily. Ugh-lomi flung himself flat on the grass, and lay panting and bleeding with his face on his arms.

For a second Eudena regarded the bears, then she came and sat beside him, looking at him. . . .

Presently she put forth her hand timidly and touched him, and made the guttural sound that was his name. He turned over and raised himself on his arm. His face was pale, like the face of one who is afraid. He looked at her steadfastly for a moment, and then suddenly he laughed. "Waugh!" he said exultantly.

"Waugh!" said she—a simple but expressive conversation.

Then Ugh-lomi came and knelt beside her, and on hands and knees peered over the brow and examined the gorge. His breath was steady now, and the blood on his leg had ceased to flow, though the scratches the she-bear had made were open and wide. He squatted up and sat staring at the footmarks of the great bear as they came to the gully—they were as wide as his head and twice as long. Then he jumped up and went along the cliff face until the ledge was visible. Here he sat down for some time thinking, while Eudena watched him. Presently she saw the bears had gone.

At last Ugh-lomi rose, as one whose mind is made up. He returned towards the gully, Eudena keeping close by him, and together they clambered to the ledge. They took the firestone and a flint, and then Ugh-lomi went down to the foot of the cliff very cautiously, and found his axe. They returned to the cliff as quietly as they could, and set off at a brisk walk. The ledge was a home no longer, with such callers in the neighbourhood. Ugh-lomi carried the axe and Eudena the firestone. So simple was a Palæolithic removal.

They went up-stream, although it might lead to the very lair of the cave bear, because there was no other way to go. Down the stream was the tribe, and had not Ugh-lomi killed Uya and Wau? By the stream they had to keep—because of drinking.

So they marched through beech trees, with the gorge

deepening until the river flowed, a frothing rapid, five hundred feet below them. Of all the changeful things in this world of change, the courses of rivers in deep valleys change least. It was the river Wey, the river we know to-day, and they marched over the very spots where nowadays stand little Guildford and Godalming—the first human beings to come into the land. Once a grey ape chattered and vanished, and all along the cliff edge, vast and even, ran the spoor of the great cave bear.

And then the spoor of the bear fell away from the cliff, showing, Ugh-lomi thought, that he came from some place to the left, and keeping to the cliff's edge, they presently came to an end. They found themselves looking down on a great semi-circular space caused by the collapse of the cliff. It had smashed right across the gorge, banking the up-stream water back in a pool which overflowed in a rapid. The slip had happened long ago. It was grassed over, but the face of the cliffs that stood about the semicircle was still almost fresh-looking and white as on the day when the rock must have broken and slid down. Starkly exposed and black under the foot of these cliffs were the mouths of several caves. And as they stood there, looking at the space, and disinclined to skirt it, because they thought the bears' lair lay somewhere on the left in the direction they must needs take, they saw suddenly first one bear and then two coming up the grass slope to the right and going across the amphitheatre towards the caves. Andoo was first; he dropped a little on his fore-foot and his mien was despondent, and the she-bear came shuffling behind.

Eudena and Ugh-lomi stepped back from the cliff until they could just see the bears over the verge. Then Ugh-lomi stopped. Eudena pulled his arm, but he turned with a forbidding gesture, and her hand dropped. Ugh-lomi stood watching the bears, with his axe in his hand, until they had vanished into the cave.

He growled softly, and shook the axe at the she-bear's receding quarters. Then to Eudena's terror, instead of creeping off with her, he lay flat down and crawled forward into such a position that he could just see the cave. It was bears—and he did it as calmly as if it had been rabbits he was watching!

He lay still, like a bared log, sun-dappled, in the shadow of the trees. He was thinking. And Eudena had learnt, even when a little girl, that when Ughlomi became still like that, jaw-bone on fist, novel things presently began to happen.

It was an hour before the thinking was over; it was noon when the two little savages had found their way to the cliff brow that overhung the bears' cave. And all the long afternoon they fought desperately with a great boulder of chalk; trundling it, with nothing but their unaided sturdy muscles, from the gully where it had hung like a loose tooth, towards the cliff top. It was full two yards about, it stood as high as Eudena's waist, it was obtuse-angled and toothed with flints. And when the sun set it was poised, three inches from the edge, above the cave of the great cave bear.

In the cave conversation languished during that afternoon. The she-bear snoozed sulkily in her corner—for she was fond of pig and monkey—and Andoo was busy licking the side of his paw and smearing his face to cool the smart and inflammation of his wounds. Afterwards he went and sat just within the mouth of the cave, blinking out at the afternoon sun with his uninjured eye, and thinking.

"I never was so startled in my life," he said at last. "They are the most extraordinary beasts. Attacking *me!*"

"I don't like them," said the she-bear, out of the darkness behind.

"A feebler sort of beast I *never* saw. I can't think what the world is coming to. Scraggy, weedy legs. . . . Wonder how they keep warm in winter?"

"Very likely they don't," said the she-bear.

"I suppose it's a sort of monkey gone wrong."

"It's a change," said the she-bear.

A pause.

"The advantage he had was merely accidental," said Andoo. "These things *will* happen at times."

"I can't understand why you let go," said the she-bear.

That matter had been discussed before, and settled. So Andoo, being a bear of experience, remained silent for a space. Then he resumed upon a different aspect of the matter. "He has a sort of claw—a long claw that he seemed to have first on one paw and then on the other. Just one claw. They're very odd things. The bright thing, too, they seemed to have—like that glare that comes in the sky in daytime—only it jumps about—it's really worth seeing. It's a thing with a root, too—like grass when it is windy."

"Does it bite?" asked the she-bear. "If it bites it can't be a plant."

"No—I don't know," said Andoo. "But it's curious, anyhow."

"I wonder if they *are* good eating?" said the she-bear.

"They look it," said Andoo, with appetite—for the cave bear, like the polar bear, was an incurable carnivore—no roots or honey for *him*.

The two bears fell into a meditation for a space. Then Andoo resumed his simple attentions to his eye. The sunlight up the green slope before the cave mouth grew warmer in tone and warmer, until it was a ruddy amber.

"Curious sort of thing—day," said the cave bear. "Lot too much of it, I think. Quite unsuitable for hunting. Dazzles me always. I can't smell nearly so well by day."

The she-bear did not answer, but there came a measured crunching sound out of the darkness. She

had turned up a bone. Andoo yawned. "Well," he said. He strolled to the cave mouth and stood with his head projecting, surveying the amphitheatre. He found he had to turn his head completely round to see objects on his right-hand side. No doubt that eye would be all right to-morrow.

He yawned again. There was a tap overhead, and a big mass of chalk flew out from the cliff face, dropped a yard in front of his nose, and starred into a dozen unequal fragments. It startled him extremely.

When he had recovered a little from his shock, he went and sniffed curiously at the representative pieces of the fallen projectile. They had a distinctive flavour, oddly reminiscent of the two drab animals of the ledge. He sat up and pawed the larger lump, and walked round it several times, trying to find a man about it somewhere. . . .

When night had come he went off down the river gorge to see if he could cut off either of the ledge's occupants. The ledge was empty, there were no signs of the red thing, but as he was rather hungry he did not loiter long that night, but pushed on to pick up a red deer fawn. He forgot about the drab animals. He found a fawn, but the doe was close by and made an ugly fight for her young. Andoo had to leave the fawn, but as her blood was up she stuck to the attack, and at last he got in a blow of his paw on her nose, and so got hold of her. More meat but less delicacy, and the she-bear, following, had her share. The next afternoon, curiously enough, the very fellow of the first white rock fell, and smashed precisely according to precedent.

The aim of the third, that fell the night after, however, was better. It hit Andoo's unspeculative skull with a crack that echoed up the cliff, and the white fragments went dancing to all the points of the compass. The she-bear coming after him and sniffing curiously at him, found him lying in an odd sort of

attitude, with his head wet and all out of shape. She was a young she-bear, and inexperienced, and having sniffed about him for some time and licked him a little, and so forth, she decided to leave him until the odd mood had passed, and went on her hunting alone.

She looked up the fawn of the red doe they had killed two nights ago, and found it. But it was lonely hunting without Andoo, and she returned caveward before dawn. The sky was grey and overcast, the trees up the gorge were black and unfamiliar, and into her ursine mind came a dim sense of strange and dreary happenings. She lifted up her voice and called Andoo by name. The sides of the gorge re-echoed her.

As she approached the caves she saw in the half light, and heard a couple of jackals scuttle off, and immediately after a hyæna howled and a dozen clumsy bulks went lumbering up the slope, and stopped and yelled derision. "Lord of the rocks and caves—ya-ha!" came down the wind. The dismal feeling in the she-bear's mind became suddenly acute. She shuffled across the amphitheatre.

"Ya-ha!" said the hyænas, retreating. "Ya-ha!"

The cave bear was not lying quite in the same attitude, because the hyænas had been busy, and in one place his ribs showed white. Dotted over the turf about him lay the smashed fragments of the three great lumps of chalk. And the air was full of the scent of death.

The she-bear stopped dead. Even now, that the great and wonderful Andoo was killed was beyond her believing. Then she heard far overhead a sound, a queer sound, a little like the shout of a hyæna but fuller and lower in pitch. She looked up, her little dawn-blinded eyes seeing little, her nostrils quivering. And there, on the cliff edge, far above her against the bright pink of dawn, were two little shaggy round dark things, the heads of Eudena and Ugh-lomi, as they

shouted derision at her. But though she could not see them very distinctly she could hear, and dimly she began to apprehend. A novel feeling as of imminent strange evils came into her heart.

She began to examine the smashed fragments of chalk that lay about Andoo. For a space she stood still, looking about her and making a low continuous sound that was almost a moan. Then she went back incredulously to Andoo to make one last effort to rouse him.

III.—*The First Horseman*

In the days before Ugh-lomi there was little trouble between the horses and men. They lived apart—the men in the river swamps and thickets, the horses on the wide grassy uplands between the chestnuts and the pines. Sometimes a pony would come straying into the clogging marshes to make a flint-hacked meal, and sometimes the tribe would find one, the kill of a lion, and drive off the jackals, and feast heartily while the sun was high. These horses of the old time were clumsy at the fetlock and dun-coloured, with a rough tail and big head. They came every spring-time north-westward into the country, after the swallows and before the hippopotami, as the grass on the wide downland stretches grew long. They came only in small bodies thus far, each herd, a stallion and two or three mares and a foal or so, having its own stretch of country, and they went again when the chestnut-trees were yellow and the wolves came down the Wealden mountains.

It was their custom to graze right out in the open, going into cover only in the heat of the day. They avoided the long stretches of thorn and beechwood, preferring an isolated group of trees void of ambuscade, so that it was hard to come upon them. They were never fighters; their heels and teeth were for one another, but in the clear country, once they were

started, no living thing came near them, though perhaps the elephant might have done so had he felt the need. And in those days man seemed a harmless thing enough. No whisper of prophetic intelligence told the species of the terrible slavery that was to come, of the whip and spur and bearing-rein, the clumsy load and the slippery street, the insufficient food, and the knacker's yard, that was to replace the wide grass-land and the freedom of the earth.

Down in the Wey marshes Ugh-lomi and Eudena had never seen the horses closely, but now they saw them every day as the two of them raided out from their lair on the ledge in the gorge, raiding together in search of food. They had returned to the ledge after the killing of Andoq; for of the she-bear they were not afraid. The she-bear had become afraid of them, and when she winded them she went aside. The two went together everywhere; for since they had left the tribe Eudena was not so much Ugh-lomi's woman as his mate; she learnt to hunt even—as much, that is, as any woman could. She was indeed a marvellous woman. He would lie for hours watching a beast, or planning catches in that shock head of his, and she would stay beside him, with her bright eyes upon him, offering no irritating suggestions—as still as any man. A wonderful woman!

At the top of the cliff was an open grassy lawn and then beechwoods, and going through the beechwoods one came to the edge of the rolling grassy expanse, and in sight of the horses. Here, on the edge of the wood and bracken, were the rabbit-burrows, and here among the fronds Eudena and Ugh-lomi would lie with their throwing-stones ready, until the little people came out to nibble and play in the sunset. And while Eudena would sit, a silent figure of watchfulness, regarding the burrows, Ugh-lomi's eyes were ever away across the greensward at those wonderful grazing strangers.

In a dim way he appreciated their grace and their supple nimbleness. As the sun declined in the evening-time, and the heat of the day passed, they would become active, would start chasing one another, neighing, dodging, shaking their manes, coming round in great curves, sometimes so close that the pounding of the turf sounded like hurried thunder. It looked so fine that Ugh-lomi wanted to join in badly. And sometimes one would roll over on the turf, kicking four hoofs heavenward, which seemed formidable and was certainly much less alluring.

Dim imaginings ran through Ugh-lomi's mind as he watched—by virtue of which two rabbits lived the longer. And sleeping, his brains were clearer and bolder—for that was the way in those days. He came near the horses, he dreamt, and fought, smiting-stone against hoof, but then the horses changed to men, or, at least, to men with horses' heads, and he awoke in a cold sweat of terror.

Yet the next day in the morning, as the horses were grazing, one of the mares whinnied, and they saw Ugh-lomi coming up the wind. They all stopped their eating and watched him. Ugh-lomi was not coming towards them, but strolling obliquely across the open, looking at anything in the world but horses. He had stuck three fern-fronds into the mat of his hair, giving him a remarkable appearance, and he walked very slowly. "What's up now?" said the Master Horse, who was capable, but inexperienced.

"It looks more like the first half of an animal than anything else in the world," he said. "Fore-legs and no hind."

"It's only one of those pink monkey things," said the Eldest Mare. "They're a sort of river monkey. They're quite common on the plains."

Ugh-lomi continued his oblique advance. The Eldest Mare was struck with the want of motive in his proceedings.

"Fool!" said the Eldest Mare, in a quick conclusive way she had. She resumed her grazing. The Master Horse and the Second Mare followed suit.

"Look! he's nearer," said the Foal with a stripe.

One of the younger foals made uneasy movements. Ugh-lomi squatted down, and sat regarding the horses fixedly. In a little while he was satisfied that they meant neither flight nor hostilities. He began to consider his next procedure. He did not feel anxious to kill, but he had his axe with him, and the spirit of sport was upon him. How would one kill one of these creatures?—these great beautiful creatures!

Eudena, watching him with a fearful admiration from the cover of the bracken, saw him presently go on all fours, and so proceed again. But the horses preferred him a biped to a quadruped, and the Master Horse threw up his head and gave the word to move. Ugh-lomi thought they were off for good, but after a minute's gallop they came round in a wide curve, and stood winding him. Then, as a rise in the ground hid him, they tailed out, the Master Horse leading, and approached him spirally.

He was as ignorant of the possibilities of a horse as they were of his. And at this stage it would seem he funk'd. He knew this kind of stalking would make red deer or buffalo charge, if it were persisted in. At any rate Eudena saw him jump up and come walking towards her with the fern plumes held in his hand.

She stood up, and he grinned to show that the whole thing was an immense lark, and that what he had done was just what he had planned to do from the very beginning. So that incident ended. But he was very thoughtful all that day.

The next day this foolish drab creature with the leonine mane, instead of going about the grazing or hunting he was made for, was prowling round the horses again. The Eldest Mare was all for silent contempt. "I suppose he wants to learn something from us," she

said, and "Let him." The next day he was at it again. The Master Horse decided he meant absolutely nothing. But as a matter of fact, Ugh-lomi, the first of men to feel that curious spell of the horse that binds us even to this day, meant a great deal. He admired them unreservedly. There was a rudiment of the snob in him, I am afraid, and he wanted to be near these beautifully-curved animals. Then there were vague conceptions of a kill. If only they would let him come near them! But they drew the line, he found, at fifty yards. If he came nearer than that they moved off—with dignity. I suppose it was the way he had blinded Andoo that made him think of leaping on the back of one of them. But though Eudena after a time came out in the open too, and they did some unobtrusive stalking, things stopped there.

Then one memorable day a new idea came to Ugh-lomi. The horse looks down and level, but he does not look up. No animals look up—they have too much common-sense. It was only that fantastic creature, man, could waste his wits skyward. Ugh-lomi made no philosophical deductions, but he perceived the thing was so. So he spent a weary day in a beech that stood in the open, while Eudena stalked. Usually the horses went into the shade in the heat of the afternoon, but that day the sky was overcast, and they would not, in spite of Eudena's solicitude.

It was two days after that that Ugh-lomi had his desire. The day was blazing hot, and the multiplying flies asserted themselves. The horses stopped grazing before mid-day, and came into the shadow below him, and stood in couples nose to tail, flapping.

The Master Horse, by virtue of his heels, came closest to the tree. And suddenly there was a rustle and a creak, a *thud*. . . . Then a sharp chipped flint bit him on the cheek. The Master Horse stumbled, came on one knee, rose to his feet, and was off like the wind. The air was full of the whirl of limbs, the

prance of hoofs, and snorts of alarm. Ugh-lomi was pitched a foot in the air, came down again, up again, his stomach was hit violently, and then his knees got a grip of something between them. He found himself clutching with knees, feet, and hands, careering violently with extraordinary oscillation through the air—his axe gone heaven knows whither. "Hold tight," said Mother Instinct, and he did.

He was aware of a lot of coarse hair in his face, some of it between his teeth, and of green turf streaming past in front of his eyes. He saw the shoulder of the Master Horse, vast and sleek, with the muscles flowing swiftly under the skin. He perceived that his arms were round the neck, and that the violent jerking he experienced had a sort of rhythm.

Then he was in the midst of a wild rush of tree-stems, and then there were fronds of bracken about, and then more open turf. Then a stream of pebbles rushing past, little pebbles flying sideways athwart the stream from the blow of the swift hoofs. Ugh-lomi began to feel frightfully sick and giddy, but he was not the stuff to leave go simply because he was uncomfortable.

He dared not leave his grip, but he tried to make himself more comfortable. He released his hug on the neck, gripping the mane instead. He slipped his knees forward, and pushing back, came into a sitting position where the quarters broaden. It was nervous work, but he managed it, and at last he was fairly seated astride, breathless indeed, and uncertain, but with that frightful pounding of his body at any rate relieved.

Slowly the fragments of Ugh-lomi's mind got into order again. The pace seemed to him terrific, but a kind of exultation was beginning to oust his first frantic terror. The air rushed by, sweet and wonderful, the rhythm of the hoofs changed and broke up and returned into itself again. They were on turf now, a wide glade—the beech-trees a hundred yards away

either side, and a succulent band of green starred with pink blossom and shot with silver water here and there, meandered down the middle. Far off was a glimpse of blue valley—far away. The exultation grew. It was man's first taste of pace.

Then came a wide space dappled with flying fallow deer scattering this way and that, and then a couple of jackals, mistaking Ugh-lomi for a lion, came hurrying after him. And when they saw it was not a lion they still came on out of curiosity. On galloped the horse, with his one idea of escape, and after him the jackals, with pricked ears and quickly-barked remarks. "Which kills which?" said the first jackal. "It's the horse being killed," said the second. They gave the howl of following, and the horse answered to it as a horse answers nowadays to the spur.

On they rushed, a little tornado through the quiet day, putting up startled birds, sending a dozen unexpected things darting to cover, raising a myriad of indignant dung-flies, smashing little blossoms, flowering complacently, back into their parental turf. Trees again, and then splash, splash across a torrent; then a hare shot out of a tuft of grass under the very hoofs of the Master Horse, and the jackals left them incontinently. So presently they broke into the open again, a wide expanse of turfy hillside—the very grassy downs that fall northward nowadays from the Epsom Stand.

The first hot bolt of the Master Horse was long since over. He was falling into a measured trot, and Ugh-lomi, albeit bruised exceedingly and quite uncertain of the future, was in a state of glorious enjoyment. And now came a new development. The pace broke again, the Master Horse came round on a short curve, and stopped dead. . . .

Ugh-lomi became alert. He wished he had a flint, but the throwing flint he had carried in a thong about his waist was—like the axe—heaven knows where. The Master Horse turned his head, and Ugh-lomi became

aware of an eye and teeth. He whipped his leg into a position of security, and hit at the cheek with his fist. Then the head went down somewhere out of existence apparently, and the back he was sitting on flew up into a dome. Ugh-lomi became a thing of instinct again—strictly prehensile; he held by knees and feet, and his head seemed sliding towards the turf. His fingers were twisted into the shock of mane, and the rough hair of the horse saved him. The gradient he was on lowered again, and then—"Whup!" said Ugh-lomi astonished, and the slant was the other way up. But Ugh-lomi was a thousand generations nearer the primordial than man: no monkey could have held on better. And the lion had been training the horse for countless generations against the tactics of rolling and rearing back. But he kicked like a master, and buck-jumped rather neatly. In five minutes Ugh-lomi lived a lifetime. If he came off the horse would kill him, he felt assured.

Then the Master Horse decided to stick to his old tactics again, and suddenly went off at a gallop. He headed down the slope, taking the steep places at a rush, swerving neither to the right nor to the left, and, as they rode down, the wide expanse of valley sank out of sight behind the approaching skirmishers of oak and hawthorn. They skirted a sudden hollow with the pool of a spring, rank weeds and silver bushes. The ground grew softer and the grass taller, and on the right-hand side and the left came scattered bushes of May—still splashed with belated blossom. Presently the bushes thickened until they lashed the passing rider and little flashes and goutts of blood came out on horse and man. Then the way opened again.

And then came a wonderful adventure. A sudden squeal of unreasonable anger rose amidst the bushes, the squeal of some creature bitterly wronged. And crashing after them appeared a big, grey-blue shape. It was Yaaa, the big-horned rhinoceros, in one of those

fits of fury of his, charging full tilt, after the manner of his kind. He had been startled at his feeding, and someone, it did not matter who, was to be ripped and trampled therefor. He was bearing down on them from the left, with his wicked little eye red, his great horn down and his tail like a jury-mast behind him. For a minute Ugh-lomi was minded to slip off and dodge, and then behold! the staccato of the hoofs grew swifter, and the rhinoceros and his stumpy hurrying little legs seemed to slide out at the back corner of Ugh-lomi's eye. In two minutes they were through the bushes of May, and out in the open, going fast. For a space he could hear the ponderous paces in pursuit receding behind him, and then it was just as if Yaaa had not lost his temper, as if Yaaa had never existed.

The pace never faltered, on they rode and on.

Ugh-lomi was now all exultation. To exult in those days was to insult. "Ya-ha! big nose!" he said, trying to crane back and see some remote speck of a pursuer. "Why don't you carry your smiting-stone in your fist?" he ended with a frantic whoop.

But that whoop was unfortunate, for coming close to the ear of the horse, and being quite unexpected, it startled the stallion extremely. He shied violently. Ugh-lomi suddenly found himself uncomfortable again. He was hanging on to the horse, he found, by one arm and one knee.

The rest of the ride was honourable but unpleasant. The view was chiefly of blue sky, and that was combined with the most unpleasant physical sensations. Finally, a bush of thorn lashed him and he let go.

He hit the ground with his cheek and shoulder, and then, after a complicated and extraordinarily rapid movement, hit it again with the end of his backbone. He saw splashes and sparks of light and colour. The ground seemed bouncing about just like the horse had done. Then he found he was sitting on turf, six yards beyond the bush. In front of him was a space

of grass, growing greener and greener, and a number of human beings in the distance, and the horse was going round at a smart gallop quite a long way off to the right.

The human beings were on the opposite side of the river, some still in the water, but they were all running away as hard as they could go. The advent of a monster that took to pieces was not the sort of novelty they cared for. For quite a minute Ugh-lomi sat regarding them in a purely spectacular spirit. The bend of the river, the knoll among the reeds and royal ferns, the thin streams of smoke going up to Heaven, were all perfectly familiar to him. It was the squatting-place of the Sons of Uya, of Uya from whom he had fled with Eudena, and whom he had waylaid in the chestnut woods and killed with the First Axe.

He rose to his feet, still dazed from his fall, and as he did so the scattering fugitives turned and regarded him. Some pointed to the receding horse and chattered. He walked slowly towards them, staring. He forgot the horse, he forgot his own bruises, in the growing interest of this encounter. There were fewer of them than there had been—he supposed the others must have hid—the heap of fern for the night fire was not so high. By the flint heaps should have sat Wau—but then he remembered he had killed Wau. Suddenly brought back to this familiar scene, the gorge and the bears and Eudena seemed things remote, things dreamt of.

He stopped at the bank and stood regarding the tribe. His mathematical abilities were of the slightest, but it was certain there were fewer. The men might be away, but there were fewer women and children. He gave the shout of home-coming. His quarrel had been with Uya and Wau—not with the others. "Children of Uya!" he cried. They answered with his name, a little fearfully because of the strange way he had come.

For a space they spoke together. Then an old woman lifted a shrill voice and answered him. "Our Lord is a Lion."

Ugh-lomi did not understand that saying. They answered him again several together, "Uya comes again. He comes as a Lion. Our Lord is a Lion. He comes at night. He slays whom he will. But none other may slay us, Ugh-lomi, none other may slay us."

Still Ugh-lomi did not understand.

"Our Lord is a Lion. He speaks no more to men."

Ugh-lomi stood regarding them. He had had dreams—he knew that though he had killed Uya, Uya still existed. And now they told him Uya was a Lion.

The shrivelled old woman, the mistress of the fire-minders, suddenly turned and spoke softly to those next to her. She was a very old woman indeed, she had been the first of Uya's wives, and he had let her live beyond the age to which it is seemly a woman should be permitted to live. She had been cunning from the first, cunning to please Uya and to get food. And now she was great in counsel. She spoke softly, and Ugh-lomi watched her shrivelled form across the river with a curious distaste. Then she called aloud, "Come over to us, Ugh-lomi."

A girl suddenly lifted up her voice. "Come over to us, Ugh-lomi," she said. And they all began crying, "Come over to us, Ugh-lomi."

It was strange how their manner changed after the old woman called.

He stood quite still watching them all. It was pleasant to be called, and the girl who had called first was a pretty one. But she made him think of Eudena.

"Come over to us, Ugh-lomi," they cried, and the voice of the shrivelled old woman rose above them all. At the sound of her voice his hesitation returned.

He stood on the river bank, Ugh-lomi—Ugh the Thinker—with his thoughts slowly taking shape. Presently one and then another paused to see what

he would do. He was minded to go back, he was minded not to. Suddenly his fear or his caution got the upper hand. Without answering them he turned, and walked back towards the distant thorn-trees, the way he had come. Forthwith the whole tribe started crying to him again very eagerly. He hesitated and turned, then he went on, then he turned again, and then once again, regarding them with troubled eyes as they called. The last time he took two paces back, before his fear stopped him. They saw him stop once more, and suddenly shake his head and vanish among the hawthorn-trees.

Then all the women and children lifted up their voices together, and called to him in one last vain effort.

Far down the river the reeds were stirring in the breeze, where, convenient for his new sort of feeding, the old lion, who had taken to man-eating, had made his lair.

The old woman turned her face that way, and pointed to the hawthorn thickets. "Uya," she screamed, "there goes thine enemy! There goes thine enemy, Uya! Why do you devour us nightly? We have tried to snare him! There goes thine enemy, Uya!"

But the lion who preyed upon the tribe was taking his siesta. The cry went unheard. That day he had dined on one of the plumper girls, and his mood was a comfortable placidity. He really did not understand that he was Uya or that Ugh-lomi was his enemy.

So it was that Ugh-lomi rode the horse, and heard first of Uya the lion, who had taken the place of Uya the Master, and was eating up the tribe. And as he hurried back to the gorge his mind was no longer full of the horse, but of the thought that Uya was still alive, to slay or be slain. Over and over again he saw the shrunken band of women and children crying that Uya was a lion. Uya was a lion!

And presently, fearing the twilight might come upon him, Ugh-lomi began running.

IV.—*Uya the Lion*

The old lion was in luck. The tribe had a certain pride in their ruler, but that was all the satisfaction they got out of it. He came the very night that Ugh-lomi killed Uya the Cunning, and so it was they named him Uya. It was the old woman, the fire-minder, who first named him Uya. A shower had lowered the fires to a glow, and made the night dark. And as they conversed together, and peered at one another in the darkness, and wondered fearfully what Uya would do to them in their dreams now that he was dead, they heard the mounting reverberations of the lion's roar close at hand. Then everything was still.

They held their breath, so that almost the only sounds were the patter of the rain and the hiss of the raindrops in the ashes. And then, after an interminable time, a crash, and a shriek of fear, and a growling. They sprang to their feet, shouting, screaming, running this way and that, but brands would not burn, and in a minute the victim was being dragged away through the ferns. It was Irk, the brother of Wau.

So the lion came.

The ferns were still wet from the rain the next night, and he came and took Click with the red hair. That sufficed for two nights. And then in the dark between the moons he came three nights, night after night, and that though they had good fires. He was an old lion with stumpy teeth, but very silent and very cool; he knew of fires before; these were not the first of mankind that had ministered to his old age. The third night he came between the outer fire and the inner, and he leapt the flint heap, and pulled down Irm the son of Irk, who had seemed like to be the

leader. That was a dreadful night, because they lit great flares of fern and ran screaming, and the lion missed his hold of Irm. By the glare of the fire they saw Irm struggle up, and run a little way towards them, and then the lion in two bounds had him down again. That was the last of Irm.

So fear came, and all the delight of spring passed out of their lives. Already there were five gone out of the tribe, and four nights added three more to the number. Food-seeking became spiritless, none knew who might go next, and all day the women toiled, even the favourite women, gathering litter and sticks for the night fires. And the hunters hunted ill: in the warm spring-time hunger came again as though it was still winter. The tribe might have moved, had they had a leader, but they had no leader, and none knew where to go that the lion could not follow them. So the old lion waxed fat and thanked heaven for the kindly race of men. Two of the children and a youth died while the moon was still new, and then it was the shrivelled old fire-minder first bethought herself in a dream of Eudena and Ugh-lomi, and of the way Uya had been slain. She had lived in fear of Uya all her days, and now she lived in fear of the lion. That Ugh-lomi could kill Uya for good—Ugh-lomi whom she had seen born—was impossible. It was Uya still seeking his enemy!

And then came the strange return of Ugh-lomi, a wonderful animal seen galloping far across the river, that suddenly changed into two animals, a horse and a man. Following this portent, the vision of Ugh-lomi on the farther bank of the river. . . . Yes, it was all plain to her. Uya was punishing them, because they had not hunted down Ugh-lomi and Eudena.

The men came straggling back to the chances of the night while the sun was still golden in the sky. They were received with the story of Ugh-lomi. She went across the river with them and showed them his spoor

hesitating on the farther bank. Siss the Tracker knew the feet for Ugh-lomi's. "Uya needs Ugh-lomi," cried the old woman, standing on the left of the bend, a gesticulating figure of flaring bronze in the sunset. Her cries were strange sounds, flitting to and fro on the borderland of speech, but this was the sense they carried: "The lion needs Eudena. He comes night after night seeking Eudena and Ugh-lomi. When he cannot find Eudena and Ugh-lomi, he grows angry and he kills. Hunt Eudena and Ugh-lomi, Eudena whom he pursued, and Ugh-lomi for whom he gave the death-word! Hunt Eudena and Ugh-lomi!"

She turned to the distant reed-bed, as sometimes she had turned to Uya in his life. "Is it not so, my lord?" she cried. And, as if in answer, the tall reeds bowed before a breath of wind.

Far into the twilight the sound of hacking was heard from the squatting-places. It was the men sharpening their ashen spears against the hunting of the morrow. And in the night, early before the moon rose, the lion came and took the girl of Siss the Tracker.

In the morning before the sun had risen, Siss the Tracker, and the lad Wau-hau, who now chipped flints, and One Eye, and Bo, and the snail-eater, the two red-haired men, and Cat's-skin and Snake, all the men that were left alive of the Sons of Uya, taking their ash spears and their smiting-stones, and with throwing stones in the beast-paw bags, started forth upon the trail of Ugh-lomi through the hawthorn thickets where Yaaa the Rhinoceros and his brothers were feeding, and up the bare downland towards the beechwoods.

That night the fires burnt high and fierce, as the waxing moon set, and the lion left the crouching women and children in peace.

And the next day, while the sun was still high, the hunters returned—all save One Eye, who lay dead with a smashed skull at the foot of the ledge. (When

Ugh-lomi came back that evening from stalking the horses, he found the vultures already busy over him.) And with them the hunters brought Eudena, bruised and wounded, but alive. That had been the strange order of the shrivelled old woman, that she was to be brought alive—"She is no kill for us. She is for Uya the Lion." Her hands were tied with thongs, as though she had been a man, and she came weary and drooping—her hair over her eyes and matted with blood. They walked about her, and ever and again the Snail-Eater, whose name she had given, would laugh and strike her with his ashen spear. And after he had struck her with his spear, he would look over his shoulder like one who had done an over-bold deed. The others, too, looked over their shoulders ever and again, and all were in a hurry save Eudena. When the old woman saw them coming, she cried aloud with joy.

They made Eudena cross the river with her hands tied, although the current was strong and when she slipped the old woman screamed, first with joy and then for fear she might be drowned. And when they had dragged Eudena to shore, she could not stand for a time, albeit they beat her sore. So they let her sit with her feet touching the water, and her eyes staring before her, and her face set, whatever they might do or say. All the tribe came down to the squatting-place, even curly little Haha, who as yet could scarcely toddle, and stood staring at Eudena and the old woman, as now we should stare at some strange wounded beast and its captor.

The old woman tore off the necklace of Uya that was about Eudena's neck, and put it on herself—she had been the first to wear it. Then she tore at Eudena's hair, and took a spear from Siss and beat her with all her might. And when she had vented the warmth of her heart on the girl she looked closely into her face. Eudena's eyes were closed and her features were set,

and she lay so still that for a moment the old woman feared she was dead. And then her nostrils quivered. At that the old woman slapped her face and laughed and gave the spear to Siss again, and went a little way off from her and began to talk and jeer at her after her manner.

The old woman had more words than any in the tribe. And her talk was a terrible thing to hear. Sometimes she screamed and moaned incoherently, and sometimes the shape of her guttural cries was the mere phantom of thoughts. But she conveyed to Eudena, nevertheless, much of the things that were yet to come, of the Lion and of the torment he would do her. "And Ugh-lomi! Ha, ha! Ugh-lomi is slain?"

And suddenly Eudena's eyes opened and she sat up again, and her look met the old woman's fair and level. "No," she said slowly, like one trying to remember, "I did not see my Ugh-lomi slain. I did not see my Ugh-lomi slain."

"Tell her," cried the old woman. "Tell her—he that killed him. Tell her how Ugh-lomi was slain."

She looked, and all the women and children there looked, from man to man.

None answered her. They stood shamefaced.

"Tell her," said the old woman. The men looked at one another.

Eudena's face suddenly lit.

"Tell her," she said. "Tell her, mighty men! Tell her the killing of Ugh-lomi."

The old woman rose and struck her sharply across her mouth.

"We could not find Ugh-lomi," said Siss the Tracker, slowly. "Who hunts two, kills none."

Then Eudena's heart leapt, but she kept her face hard. It was as well, for the old woman looked at her sharply, with murder in her eyes.

Then the old woman turned her tongue upon the men because they had feared to go on after Ugh-lomi.

She dreaded no one now Uya was slain. She scolded them as one scolds children. And they scowled at her, and began to accuse one another. Until suddenly Siss the Tracker raised his voice and bade her hold her peace.

And so when the sun was setting they took Eudena and went—though their hearts sank within them—along the trail the old lion had made in the reeds. All the men went together. At one place was a group of alders, and here they hastily bound Eudena where the lion might find her when he came abroad in the twilight, and having done so they hurried back until they were near the squatting-place. Then they stopped. Siss stopped first and looked back again at the alders. They could see her head even from the squatting-place, a little black shock under the limb of the larger tree. That was as well.

All the women and children stood watching upon the crest of the mound. And the old woman stood and screamed for the lion to take her whom he sought, and counselled him on the torments he might do her.

Eudena was very weary now, stunned by beatings and fatigue and sorrow, and only the fear of the thing that was still to come upheld her. The sun was broad and blood-red between the stems of the distant chestnuts, and the west was all on fire; the evening breeze had died to a warm tranquillity. The air was full of midge swarms, the fish in the river hard by would leap at times, and now and again a cockchafer would drone through the air. Out of the corner of her eye Eudena could see a part of the squatting-knoll, and little figures standing and staring at her. And—a very little sound but very clear—she could hear the beating of the firestone. Dark and near to her and still was the reed-fringed thicket of the lair.

Presently the firestone ceased. She looked for the sun and found he had gone, and overhead and growing brighter was the waxing moon. She looked to-

wards the thicket of the lair, seeking shapes in the reeds, and then suddenly she began to wriggle and wriggle, weeping and calling upon Ugh-lomi.

But Ugh-lomi was far away. When they saw her head moving with her struggles, they shouted together on the knoll, and she desisted and was still. And then came the bats, and the star that was like Ugh-lomi crept out of its blue hiding-place in the west. She called to it, but softly, because she feared the lion. And all through the coming of the twilight the thicket was still.

So the dark crept upon Eudena, and the moon grew bright, and the shadows of things that had fled up the hillside and vanished with the evening came back to them short and black. And the dark shapes in the thicket of reeds and alders where the lion lay, gathered, and a faint stir began there. But nothing came out therefrom all through the gathering of the darkness.

She looked at the squatting-place and saw the fires glowing smoky-red, and the men and women going to and fro. The other way, over the river, a white mist was rising. Then far away came the whimpering of young foxes and the yell of a hyæna.

There were long gaps of aching waiting. After a long time some animal splashed in the water, and seemed to cross the river at the ford beyond the lair, but what animal it was she could not see. From the distant drinking-pools she could hear the sound of splashing, and the noise of elephants—so still was the night.

The earth was now a colourless arrangement of white reflections and impenetrable shadows, under the blue sky. The silvery moon was already spotted with the filigree crests of the chestnut woods, and over the shadowy eastward hills the stars were multiplying. The knoll fires were bright red now, and black figures stood waiting against them. They were waiting for a scream. . . . Surely it would be soon.

The night suddenly seemed full of movement. She held her breath. Things were passing—one, two, three—subtly sneaking shadows. . . . Jackals.

Then a long waiting again.

Then, asserting itself as real at once over all the sounds her mind had imagined, came a stir in the thicket, then a vigorous movement. There was a snap. The reeds crashed heavily, once, twice, thrice, and then everything was still save a measured swishing. She heard a low tremulous growl, and then everything was still again. The stillness lengthened—would it never end? She held her breath; she bit her lips to stop screaming. Then something scuttled through the undergrowth. Her scream was involuntary. She did not hear the answering yell from the mound.

Immediately the thicket woke up to vigorous movement again. She saw the grass stems waving in the light of the setting moon, the alders swaying. She struggled violently—her last struggle. But nothing came towards her. A dozen monsters seemed rushing about in that little place for a couple of minutes, and then again came silence. The moon sank behind the distant chestnuts and the night was dark.

Then an odd sound, a sobbing panting, that grew faster and fainter. Yet another silence, and then dim sounds and the grunting of some animal.

Everything was still again. Far away eastwards an elephant trumpeted, and from the woods came a snarling and yelping that died away.

In the long interval the moon shone out again, between the stems of the trees on the ridge, sending two great bars of light and a bar of darkness across the reedy waste. Then came a steady rustling, a splash, and the reeds swayed wider and wider apart. And at last they broke open, cleft from root to crest. . . . The end had come.

She looked to see the thing that had come out of the reeds. For a moment it seemed certainly the great

head and jaw she expected, and then it dwindled and changed. It was a dark low thing, that remained silent, but it was not the lion. It became still—everything became still. She peered. It was like some gigantic frog, two limbs and a slanting body. Its head moved about searching the shadows. . . .

A rustle, and it moved clumsily, with a sort of hopping. And as it moved it gave a low groan.

The blood rushing through her veins was suddenly joy. "*Ugh-lomi!*" she whispered,

The thing stopped. "*Eudena,*" he answered softly with pain in his voice, and peering into the alders.

He moved again, and came out of the shadow beyond the reeds into the moonlight. All his body was covered with dark smears. She saw he was dragging his legs, and that he gripped his axe, the first axe, in one hand. In another moment he had struggled into the position of all fours, and had staggered over to her. "The lion," he said in a strange mingling of exultation and anguish. "Wau!—I have slain a lion. With my own hand. Even as I slew the great bear." He moved to emphasise his words, and suddenly broke off with a faint cry. For a space he did not move.

"Let me free," whispered Eudena. . . .

He answered her no words but pulled himself up from his crawling attitude by means of the alder stem, and hacked at her thongs with the sharp edge of his axe. She heard him sob at each blow. He cut away the thongs about her chest and arms, and then his hand dropped. His chest struck against her shoulder and he slipped down beside her and lay still.

But the rest of her release was easy. Very hastily she freed herself. She made one step from the tree, and her head was spinning. Her last conscious movement was towards him. She reeled, and dropped. Her hand fell upon his thigh. It was soft and wet, and gave way under her pressure; he cried out at her touch, and writhed and lay still again.

Presently a dark dog-like shape came very softly through the reeds. Then stopped dead and stood sniffing, hesitated, and at last turned and slunk back into the shadows.

Long was the time they remained there motionless, with the light of the setting moon shining on their limbs. Very slowly, as slowly as the setting of the moon, did the shadow of the reeds towards the mound flow over them. Presently their legs were hidden, and Ugh-lomi was but a bust of silver. The shadow crept to his neck, crept over his face, and so at last the darkness of the night swallowed them up.

The shadow became full of instinctive stirrings. There was a patter of feet, and a faint snarling—the sound of a blow.

There was little sleep that night for the women and children at the squatting-place until they heard Eudena scream. But the men were weary and sat dozing. When Eudena screamed they felt assured of their safety, and hurried to get the nearest places to the fires. The old woman laughed at the scream, and laughed again because Si, the little friend of Eudena, whimpered. Directly the dawn came they were all alert and looking towards the alders. They could see that Eudena had been taken. They could not help feeling glad to think that Uya was appeased. But across the minds of the men the thought of Ugh-lomi fell like a shadow. They could understand revenge, for the world was old in revenge, but they did not think of rescue. Suddenly a hyæna fled out of the thicket, and came galloping across the reed space. His muzzle and paws were dark-stained. At that sight all the men shouted and clutched at throwing-stones and ran towards him, for no animal is so pitiful a coward as the hyæna by day. All men hated the hyæna because he preyed on children, and would come and bite when one was sleeping on the edge of the squatting-place. And Cat's-skin, throwing

fair and straight, hit the brute shrewdly on the flank, whereat the whole tribe yelled with delight.

At the noise they made there came a flapping of wings from the lair of the lion, and three white-headed vultures rose slowly and circled and came to rest amidst the branches of an alder, overlooking the lair. "Our lord is abroad," said the old woman, pointing. "The vultures have their share of Eudena." For a space they remained there, and then first one and then another dropped back into the thicket.

Then over the eastern woods, and touching the whole world of life and colour, poured, with the exaltation of a trumpet blast, the light of the rising sun. At the sight of him the children shouted together, and clapped their hands and began to race off towards the water. Only little Si lagged behind and looked wonderingly at the alders where she had seen the head of Eudena overnight.

But Uya, the old lion, was not abroad, but at home, and he lay very still, and a little on one side. He was not in his lair, but a little way from it in a place of trampled grass. Under one eye was a little wound, the feeble little bite of the first axe. But all the ground beneath his chest was ruddy brown with a vivid streak, and in his chest was a little hole that had been made by Ugh-lomi's stabbing-spear. Along his side and at his neck the vultures had marked their claims. For so Ugh-lomi had slain him, lying stricken under his paw and thrusting haphazard at his chest. He had driven the spear in with all his strength and stabbed the giant to the heart. So it was the reign of the lion, of the second incarnation of Uya the Master, came to an end.

From the knoll the bustle of preparation grew, the hacking of spears and throwing-stones. None spake the name of Ugh-lomi for fear that it might bring him. The men were going to keep together, close together, in the hunting for a day or so. And their hunting was

to be Ugh-lomi, lest instead he should come a-hunting them.

But Ugh-lomi was lying very still and silent, outside the lion's lair, and Eudena squatted beside him, with the ash spear, all smeared with lion's blood, gripped in her hand.

V.—The Fight in the Lion's Thicket

Ugh-lomi lay still, his back against an alder, and his thigh was a red mass terrible to see. No civilised man could have lived who had been so sorely wounded, but Eudena got him thorns to close his wounds, and squatted beside him day and night, smiting the flies from him with a fan of reeds by day, and in the night threatening the hyænas with the first axe in her hand; and in a little while he began to heal. It was high summer, and there was no rain. Little food they had during the first two days his wounds were open. In the low place where they hid were no roots nor little beasts, and the stream, with its water-snails and fish, was in the open a hundred yards away. She could not go abroad by day for fear of the tribe, her brothers and sisters, nor by night for fear of the beasts, both on his account and hers. So they shared the lion with the vultures. But there was a trickle of water near by, and Eudena brought him plenty in her hands.

Where Ugh-lomi lay was well hidden from the tribe by a thicket of alders, and all fenced about with bulrushes and tall reeds. The dead lion he had killed lay near his old lair on a place of trampled reeds fifty yards away, in sight through the reed-stems, and the vultures fought each other for the choicest pieces and kept the jackals off him. Very soon a cloud of flies that looked like bees hung over him, and Ugh-lomi could hear their humming. And when Ugh-lomi's flesh was already healing—and it was not many days before

that began—only a few bones of the lion remained scattered and shining white.

For the most part Ugh-lomi sat still during the day, looking before him at nothing; sometimes he would mutter of the horses and bears and lions, and sometimes he would beat the ground with the first axe and say the names of the tribe—he seemed to have no fear of bringing the tribe—for hours together. But chiefly he slept, dreaming little because of his loss of blood and the slightness of his food. During the short summer night both kept awake. All the while the darkness lasted things moved about them, things they never saw by day. For some nights the hyænas did not come, and then one moonless night near a dozen came and fought for what was left of the lion. The night was a tumult of growling, and Ugh-lomi and Eudena could hear the bones snap in their teeth. But they knew the hyæna dare not attack any creature alive and awake, and so they were not greatly afraid.

Of a daytime Eudena would go along the narrow path the old lion had made in the reeds until she was beyond the bend, and then she would creep into the thicket and watch the tribe. She would lie close by the alders where they had bound her to offer her up to the lion, and thence she could see them on the knoll by the fire, small and clear, as she had seen them that night. But she told Ugh-lomi little of what she saw, because she feared to bring them by their names. For so they believed in those days, that naming called.

She saw the men prepare stabbing-spears and throwing-stones on the morning after Ugh-lomi had slain the lion, and go out to hunt him, leaving the women and children on the knoll. Little they knew how near he was as they tracked off in single file towards the hills, with Siss the Tracker leading them. And she watched the women and children, after the men had gone, gathering fern-fronds and twigs for the night fire, and the boys and girls running and playing

together. But the very old woman made her feel afraid. Towards noon, when most of the others were down at the stream by the bend, she came and stood on the hither side of the knoll, a gnarled brown figure, and gesticulated so that Eudena could scarce believe she was not seen. Eudena lay like a hare in its form, with shining eyes fixed on the bent witch away there, and presently she dimly understood it was the lion the old woman was worshipping—the lion Ugh-lomi had slain.

And the next day the hunters came back weary, carrying a fawn, and Eudena watched the feast enviously. And then came a strange thing. She saw—distinctly she heard—the old woman shrieking and gesticulating and pointing towards her. She was afraid, and crept like a snake out of sight again. But presently curiosity overcame her and she was back at her spying-place, and as she peered her heart stopped, for there were all the men, with their weapons in their hands, walking together towards her from the knoll.

She dared not move lest her movement should be seen, but she pressed herself close to the ground. The sun was low and the golden light was in the faces of the men. She saw they carried a piece of rich red meat thrust through by an ashen stake. Presently they stopped. "Go on!" screamed the old woman. Cat's-skin grumbled, and they came on, searching the thicket with sun-dazzled eyes. "Here!" said Siss. And they took the ashen stake with the meat upon it and thrust it into the ground. "Uya!" cried Siss, "behold thy portion. And Ugh-lomi we have slain. Of a truth we have slain Ugh-lomi. This day we slew Ugh-lomi, and to-morrow we will bring his body to you." And the others repeated the words.

They looked at each other and behind them, and partly turned and began going back. At first they walked half turned to the thicket, then, facing the mound, they walked faster, looking over their shoulders, then faster; soon they ran, it was a race at last, until

they were near the knoll. Then Siss, who was hindmost, was first to slacken his pace.

The sunset passed and the twilight came, the fires glowed red against the hazy blue of the distant chestnut-trees, and the voices over the mound were merry. Eudena lay scarcely stirring, looking from the mound to the meat and then to the mound. She was hungry, but she was afraid. At last she crept back to Ugh-lomi.

He looked round at the little rustle of her approach. His face was in shadow. "Have you got me some food?" he said.

She said she could find nothing, but that she would seek further, and went back along the lion's path until she could see the mound again, but she could not bring herself to take the meat; she had the brute's instinct of a snare. She felt very miserable.

She crept back at last towards Ugh-lomi and heard him stirring and moaning. She turned back to the mound again; then she saw something in the darkness near the stake, and peering distinguished a jackal. In a flash she was brave and angry; she sprang up, cried out, and ran towards the offering. She stumbled and fell, and heard the growling of the jackal going off.

When she arose only the ashen stake lay on the ground, the meat was gone. So she went back, to fast through the night with Ugh-lomi; and Ugh-lomi was angry with her, because she had no food for him; but she told him nothing of the things she had seen.

Two days passed and they were near starving, when the tribe slew a horse. Then came the same ceremony, and a haunch was left on the ashen stake; but this time Eudena did not hesitate.

By acting and words she made Ugh-lomi understand, but he ate most of the food before he understood; and then as her meaning passed to him he grew merry with his food. "I am Uya," he said; "I am the Lion. I am the Great Cave Bear, I who was only Ugh-lomi.

I am Wau the Cunning. It is well that they should feed me, for presently I will kill them all."

Then Eudena's heart was light, and she laughed with him; and afterwards she ate what he had left of the horseflesh with gladness.

After that it was he had a dream, and the next day he made Eudena bring him the lion's teeth and claws—so much of them as she could find—and hack him a club of alder. And he put the teeth and claws very cunningly into the wood so that the points were outward. Very long it took him, and he blunted two of the teeth hammering them in, and was very angry and threw the thing away; but afterwards he dragged himself to where he had thrown it and finished it—a club of a new sort set with teeth. That day there was more meat for them both, an offering to the lion from the tribe.

It was one day—more than a hand's fingers of days, more than anyone had skill to count—after Ugh-lomi had made the club, that Eudena while he was asleep was lying in the thicket watching the squatting-place. There had been no meat for three days. And the old woman came and worshipped after her manner. Now while she worshipped, Eudena's little friend Si and another, the child of the first girl Siss had loved, came over the knoll and stood regarding her skinny figure, and presently they began to mock her. Eudena found this entertaining, but suddenly the old woman turned on them quickly and saw them. For a moment she stood and they stood motionless, and then with a shriek of rage, she rushed towards them, and all three disappeared over the crest of the knoll.

Presently the children reappeared among the ferns beyond the shoulder of the hill. Little Si ran first, for she was an active girl, and the other child ran squealing with the old woman close upon her. And over the knoll came Siss with a bone in his hand, and Bo and Cat's-skin obsequiously behind him, each holding a piece

of food, and they laughed aloud and shouted to see the old woman so angry. And with a shriek the child was caught and the old woman set to work slapping and the child screaming, and it was very good after-dinner fun for them. Little Si ran on a little way and stopped at last between fear and curiosity.

And suddenly came the mother of the child, with hair streaming, panting, and with a stone in her hand, and the old woman turned about like a wild cat. She was the equal of any woman, was the chief of the fire-minders, in spite of her years; but before she could do anything Siss shouted to her and the clamour rose loud. Other shock heads came into sight. It seemed the whole tribe was at home and feasting. But the old woman dared not go on wreaking herself on the child Siss befriended.

Everyone made noises and called names—even little Si. Abruptly the old woman let go of the child she had caught and made a swift run at Si, for Si had no friends; and Si, realising her danger when it was almost upon her, made off headlong, with a faint cry of terror, not heeding whither she ran, straight to the lair of the lion. She swerved aside into the reeds presently, realising now whither she went.

But the old woman was a wonderful old woman, as active as she was spiteful, and she caught Si by the streaming hair within thirty yards of Eudena. All the tribe now was running down the knoll and shouting and laughing ready to see the fun.

Then something stirred in Eudena; something that had never stirred in her before; and, thinking all of little Si and nothing of her fear, she sprang up from her ambush and ran swiftly forward. The old woman did not see her, for she was busy beating little Si's face with her hand, beating with all her heart, and suddenly something hard and heavy struck her cheek. She went reeling, and saw Eudena with flaming eyes and cheeks between her and little Si. She shrieked with astonish-

ment and terror, and little Si, not understanding, set off towards the gaping tribe. They were quite close now, for the sight of Eudena had driven their fading fear of the lion out of their heads.

In a moment Eudena had turned from the cowering old woman and overtaken Si. "Si!" she cried, "Si!" She caught the child up in her arms as it stopped, pressed the nail-lined face to hers, and turned about to run towards her lair, the lair of the old lion. The old woman stood waist-high in the reeds, and screamed foul things and inarticulate rage, but did not dare to intercept her; and at the bend of the path Eudena looked back and saw all the men of the tribe crying to one another and Siss coming at a trot along the lion's trail.

She ran straight along the narrow way through the reeds to the shady place where Ugh-lomi sat with his healing thigh, just awakened by the shouting and rubbing his eyes. She came to him, a woman, with little Si in her arms. Her heart throbbed in her throat. "Ugh-lomi!" she cried. "Ugh-lomi, the tribe comes!"

Ugh-lomi sat staring in stupid astonishment at her and Si.

She pointed with Si in one arm. She sought among her feeble store of words to explain. She could hear the men calling. Apparently they had stopped outside. She put down Si and caught up the new club with the lion's teeth, and put it into Ugh-lomi's hand, and ran three yards and picked up the first axe.

"Ah!" said Ugh-lomi, waving the new club, and suddenly he perceived the occasion and, rolling over, began to struggle to his feet.

He stood but clumsily. He supported himself by one hand against the tree, and just touched the ground gingerly with the toe of his wounded leg. In the other hand he gripped the new club. He looked at his healing thigh; and suddenly the reeds began whispering,

and ceased and whispered again, and coming cautiously along the track, bending down and holding his fire-hardened stabbing-stick of ash in his hand, appeared Siss. He stopped dead, and his eyes met Ugh-lomi's.

Ugh-lomi forgot he had a wounded leg. He stood firmly on both feet. Something trickled. He glanced down and saw a little gout of blood had oozed out along the edge of the healing wound. He rubbed his hand there to give him the grip of his club, and fixed his eyes again on Siss.

"Wau!" he cried, and sprang forward, and Siss, still stooping and watchful, drove his stabbing-stick up very quickly in an ugly thrust. It ripped Ugh-lomi's guarding arm and the club came down in a counter that Siss was never to understand. He fell, as an ox falls to the pole-axe, at Ugh-lomi's feet.

To Bo it seemed the strangest thing. He had a comforting sense of tall reeds on either side, and an impregnable rampart, Siss, between him and any danger. Snail-eater was close behind and there was no danger there. He was prepared to shove behind and send Siss to death or victory. That was his place as second man. He saw the butt of the spear Siss carried leap away from him, and suddenly a dull whack and the broad back fell away forward, and he looked Ugh-lomi in the face over his prostrate leader. It felt to Bo as if his heart had fallen down a well. He had a throwing-stone in one hand and an ashen stabbing-stick in the other. He did not live to the end of his momentary hesitation which to use.

Snail-eater was a readier man, and besides Bo did not fall forward as Siss had done, but gave at his knees and hips, crumpling up with the toothed club upon his head. The Snail-eater drove his spear forward swift and straight, and took Ugh-lomi in the muscle of the shoulder, and then he drove him hard with the smiting-stone in his other hand, shouting out as he did so. The new club swished ineffectually through the reeds.

Eudena saw Ugh-lomi come staggering back from the narrow path into the open space, tripping over Siss and with a foot of ashen stake sticking out of him over his arm. And then the Snail-eater, whose name she had given, had his final injury from her, as his exultant face came out of the reeds after his spear. For she swung the first axe swift and high, and hit him fair and square on the temple; and down he went on Siss at prostrate Ugh-lomi's feet.

But before Ugh-lomi could get up, the two red-haired men were tumbling out of the reeds, spears and smiting-stones ready, and Snake hard behind them. One she struck on the neck, but not to fell him, and he blundered aside and spoilt his brother's blow at Ugh-lomi's head. In a moment Ugh-lomi dropped his club and had his assailant by the waist, and had pitched him sideways sprawling. He snatched at his club again and recovered it. The man Eudena had hit stabbed at her with his spear as he stumbled from her blow, and involuntarily she gave ground to avoid him. He hesitated between her and Ugh-lomi, half turned, gave a vague cry at finding Ugh-lomi so near, and in a moment Ugh-lomi had him by the throat, and the club had its third victim. As he went down Ugh-lomi shouted—no words, but an exultant cry.

The other red-haired man was six feet from her with his back to her, and a darker red streaking his head. He was struggling to his feet. She had an irrational impulse to stop his rising. She flung the axe at him, missed, saw his face in profile, and he had swerved beyond little Si, and was running through the reeds. She had a transitory vision of Snake standing in the throat of the path, half turned away from her, and then she saw his back. She saw the club whirling through the air, and the shock head of Ugh-lomi, with blood in the hair and blood upon the shoulder, vanishing below the reeds in pursuit. Then she heard Snake scream like a woman.

She ran past Si to where the handle of the axe stuck out of a clump of fern, and turning, found herself panting and alone with three motionless bodies. The air was full of shouts and screams. For a space she was sick and giddy, and then it came into her head that Ugh-lomi was being killed along the reed-path, and with an inarticulate cry she leapt over the body of Bo and hurried after him. Snake's feet lay across the path, and his head was among the reeds. She followed the path until it bent round and opened out by the alders, and thence she saw all that was left of the tribe in the open, scattering like dead leaves before a gale, and going back over the knoll. Ugh-lomi was hard upon Cat's-skin.

But Cat's-skin was fleet of foot and got away, and so did young Wau-Hau when Ugh-lomi turned upon him, and Ugh-lomi pursued Wau-Hau far beyond the knoll before he desisted. He had the rage of battle on him now, and the wood thrust through his shoulder stung him like a spur. When she saw he was in no danger she stopped running and stood panting, watching the distant active figures run up and vanish one by one over the knoll. In a little time she was alone again. Everything had happened very swiftly. The smoke of Brother Fire rose straight and steady from the squatting-place, just as it had done ten minutes ago, when the old woman had stood yonder worshipping the lion.

And after a long time, as it seemed, Ugh-lomi reappeared over the knoll, and came back to Eudena, triumphant and breathing heavily. She stood, her hair about her eyes and hot-faced, with the blood-stained axe in her hand, at the place where the tribe had offered her as a sacrifice to the lion. "Wau!" cried Ugh-lomi at the sight of her, his face alight with the fellowship of battle, and he waved his new club, red now and hairy; and at the sight of his glowing face her tense pose relaxed somewhat, and she stood sobbing and rejoicing.

Ugh-lomi had a queer unaccountable pang at the sight of her tears; but he only shouted "Wau!" the louder and shook the axe east and west. He called manfully to her to follow him and turned back, striding, with the club swinging in his hand, towards the squatting-place, as if he had never left the tribe; and she ceased her weeping and followed quickly as a woman should.

So Ugh-lomi and Eudena came back to the squatting-place from which they had fled many days before from the face of Uya; and by the squatting-place lay a deer half eaten, just as there had been before Ugh-lomi was man or Eudena woman. So Ugh-lomi sat down to eat, and Eudena beside him like a man, and the rest of the tribe watched them from safe hiding-places. And after a time one of the elder girls came back timorously, carrying little Si in her arms, and Eudena called to them by name, and offered them food. But the elder girl was afraid and would not come, though Si struggled to come to Eudena. Afterwards, when Ugh-lomi had eaten, he sat dozing, and at last he slept, and slowly the others came out of the hiding-places and drew near. And when Ugh-lomi woke, save that there were no men to be seen, it seemed as though he had never left the tribe.

Now, there is a thing strange but true: that all through this fight Ugh-lomi forgot that he was lame, and was not lame, and after he had rested behold! he was a lame man; and he remained a lame man to the end of his days.

Cat's-skin and the second red-haired man and Wau-Hau, who chipped flints cunningly, as his father had done before him, fled from the face of Ugh-lomi, and none knew where they hid. But two days after they came and squatted a good way off from the knoll among the bracken under the chestnuts and watched. Ugh-lomi's rage had gone, he moved to go against them and did not, and at sundown they went away. That day,

too, they found the old woman among the ferns, where Ugh-lomi had blundered upon her when he had pursued Wau-Hau. She was dead and more ugly than ever, but whole. The jackals and vultures had tried her and left her;—she was ever a wonderful old woman.

The next day the three men came again and squatted nearer, and Wau-Hau had two rabbits to hold up, and the red-haired man a wood-pigeon, and Ugh-lomi stood before the women and mocked them.

The next day they sat again nearer—without stones or sticks, and with the same offerings, and Cat's-skin had a trout. It was rare men caught fish in those days, but Cat's-skin would stand silently in the water for hours and catch them with his hand. And the fourth day Ugh-lomi suffered these three to come to the squatting-place in peace, with the food they had with them. Ugh-lomi ate the trout. Thereafter for many moons Ugh-lomi was master and had his will in peace. And on the fulness of time he was killed and eaten even as Uya had been slain.

STORY THE FOURTH

A Story of the Days to Come

I.—The Cure for Love

THE excellent Mr. Morris was an Englishman, and he lived in the days of Queen Victoria the Good. He was a prosperous and very sensible man; he read *The Times* and went to church, and as he grew towards middle age an expression of quiet contented contempt for all who were not as himself settled on his face. He was one of those people who do everything that is right and proper and sensible with inevitable regularity. He always wore just the right and proper clothes, steering the narrow way between the smart and the shabby, always subscribed to the right charities, just the judicious compromise between ostentation and meanness, and never failed to have his hair cut to exactly the proper length.

Everything that it was right and proper for a man in his position to possess, he possessed; and everything that it was not right and proper for a man in his position to possess, he did not possess.

And among other right and proper possessions, this Mr. Morris had a wife and children. They were the right sort of wife, and the right sort and number of children, of course; nothing imaginative or highly-flighty about any of them, so far as Mr. Morris could see; they wore perfectly correct clothing, neither smart nor hygienic nor faddy in any way, but just sensible; and they lived in a nice sensible house in the later Victorian sham Queen Anne style of architecture, with sham half-timbering of chocolate-painted plaster in the gables, Lincrusta Walton sham carved oak panels, a terrace of terra cotta to imitate stone, and cathedral glass in the front door. His boys went to good solid schools, and were put to respectable professions; his girls, in spite of a fantastic protest or so, were all married to suitable, steady, oldish young men with good prospects. And when it was a fit and proper thing for him to do so, Mr. Morris died. His tomb was of marble, and, without any art nonsense or laudatory inscription, quietly imposing — such being the fashion of his time.

He underwent various changes according to the accepted custom in these cases, and long before this story begins his bones even had become dust, and were scattered to the four quarters of heaven. And his sons and his grandsons and his great-grandsons and his great-great-grandsons, they too were dust and ashes, and were scattered likewise. It was a thing he could not have imagined, that a day would come when even his great-great-grandsons would be scattered to the four winds of heaven. If any one had suggested it to him he would have resented it. He was one of those worthy people who take no interest in the future of mankind at all. He had grave doubts, indeed, if there was any future for mankind after he was dead.

It seemed quite impossible and quite uninteresting to imagine anything happening after he was dead. Yet the thing was so, and when even his great-great-grandson

was dead and decayed and forgotten, when the sham half-timbered house had gone the way of all shams, and *The Times* was extinct, and the silk hat a ridiculous antiquity, and the modestly imposing stone that had been sacred to Mr. Morris had been burnt to make lime for mortar, and all that Mr. Morris had found real and important was sere and dead, the world was still going on, and people were still going about it, just as heedless and impatient of the Future, or, indeed, of anything but their own selves and property, as Mr. Morris had been.

And, strange to tell, and much as Mr. Morris would have been angered if any one had foreshadowed it to him, all over the world there were scattered a multitude of people, filled with the breath of life, in whose veins the blood of Mr. Morris flowed. Just as some day the life which is gathered now in the reader of this very story may also be scattered far and wide about this world, and mingled with a thousand alien strains, beyond all thought and tracing.

And among the descendants of this Mr. Morris was one almost as sensible and clear-headed as his ancestor. He had just the same stout, short frame as that ancient man of the nineteenth century, from whom his name of Morris—he spelt it Mwres—came; he had the same half-contemptuous expression of face. He was a prosperous person, too, as times went, and he disliked the “new-fangled,” and bothers about the future and the lower classes, just as much as the ancestral Morris had done. He did not read *The Times*: indeed, he did not know there ever had been a *Times*—that institution had foundered somewhere in the intervening gulf of years; but the phonograph machine, that talked to him as he made his toilet of a morning, might have been the voice of a reincarnated Blowitz when it dealt with the world's affairs. This phonographic machine was the size and shape of a Dutch clock, and down the front of it were electric barometric indicators, and an

electric clock and calendar, and automatic engagement reminders, and where the clock would have been was the mouth of a trumpet. When it had news the trumpet gobbled like a turkey, "Galloop, galloop," and then brayed out its message as, let us say, a trumpet might bray. It would tell Mwres in full, rich, throaty tones about the overnight accidents to the omnibus flying-machines that plied around the world, the latest arrivals at the fashionable resorts in Tibet, and of all the great monopolist company meetings of the day before, while he was dressing. If Mwres did not like hearing what it said, he had only to touch a stud, and it would choke a little and talk about something else.

Of course his toilet differed very much from that of his ancestor. It is doubtful which would have been the more shocked and pained to find himself in the clothing of the other. Mwres would certainly have sooner gone forth to the world stark naked than in the silk hat, frock coat, grey trousers and watch-chain that had filled Mr. Morris with sombre self-respect in the past. For Mwres there was no shaving to do: a skilful operator had long ago removed every hair-root from his face. His legs he encased in pleasant pink and amber garments of an air-tight material, which with the help of an ingenious little pump he distended so as to suggest enormous muscles. Above this he also wore pneumatic garments beneath an amber silk tunic, so that he was clothed in air and admirably protected against sudden extremes of heat or cold. Over this he flung a scarlet cloak with its edge fantastically curved. On his head, which had been skilfully deprived of every scrap of hair, he adjusted a pleasant little cap of bright scarlet, held on by suction and inflated with hydrogen, and curiously like the comb of a cock. So his toilet was complete; and, conscious of being soberly and becomingly attired, he was ready to face his fellow-beings with a tranquil eye.

This Mwres—the civility of “Mr.” had vanished ages ago—was one of the officials under the Wind Vane and Waterfall Trust, the great company that owned every wind wheel and waterfall in the world, and which pumped all the water and supplied all the electric energy that people in these latter days required. He lived in a vast hotel near that part of London called Seventh Way, and had very large and comfortable apartments on the seventeenth floor. Households and family life had long since disappeared with the progressive refinement of manners; and indeed the steady rise in rents and land values, the disappearance of domestic servants, the elaboration of cookery, had rendered the separate domicile of Victorian times impossible, even had any one desired such a savage seclusion. When his toilet was completed he went towards one of the two doors of his apartment—there were doors at opposite ends, each marked with a huge arrow pointing one one way and one the other—touched a stud to open it, and emerged on a wide passage, the centre of which bore chairs and was moving at a steady pace to the left. On some of these chairs were seated gaily-dressed men and women. He nodded to an acquaintance—it was not in those days etiquette to talk before breakfast—and seated himself on one of these chairs, and in a few seconds he had been carried to the doors of a lift, by which he descended to the great and splendid hall in which his breakfast would be automatically served.

It was a very different meal from a Victorian breakfast. The rude masses of bread needing to be carved and smeared over with animal fat before they could be made palatable, the still recognisable fragments of recently killed animals, hideously charred and hacked, the eggs torn ruthlessly from beneath some protesting hen,—such things as these, though they constituted the ordinary fare of Victorian times, would have awakened only horror and disgust in the refined minds of the

people of these latter days. Instead were pastes and cakes of agreeable and variegated design, without any suggestion in colour or form of the unfortunate animals from which their substance and juices were derived. They appeared on little dishes sliding out upon a rail from a little box at one side of the table. The surface of the table, to judge by touch and eye, would have appeared to a nineteenth-century person to be covered with fine white damask, but this was really an oxidised metallic surface, and could be cleaned instantly after a meal. There were hundreds of such little tables in the hall, and at most of them were other latter-day citizens singly or in groups. And as Mwres seated himself before his elegant repast, the invisible orchestra, which had been resting during an interval, resumed and filled the air with music.

But Mwres did not display any great interest either in his breakfast or the music; his eye wandered incessantly about the hall, as though he expected a belated guest. At last he rose eagerly and waved his hand, and simultaneously across the hall appeared a tall dark figure in a costume of yellow and olive green. As this person, walking amidst the tables with measured steps, drew near, the pallid earnestness of his face and the unusual intensity of his eyes became apparent. Mwres reseated himself and pointed to a chair beside him.

"I feared you would never come," he said. In spite of the intervening space of time, the English language was still almost exactly the same as it had been in England under Victoria the Good. The invention of the phonograph and suchlike means of recording sound, and the gradual replacement of books by such contrivances, had not only saved the human eyesight from decay, but had also by the establishment of a sure standard arrested the process of change in accent that had hitherto been so inevitable.

"I was delayed by an interesting case," said the man in green and yellow. "A prominent politician—ahem!

—suffering from overwork.” He glanced at the breakfast and seated himself. “I have been awake for forty hours.”

“Eh dear!” said Mwres: “fancy that! You hypnotists have your work to do.”

The hypnotist helped himself to some attractive amber-coloured jelly. “I happen to be a good deal in request,” he said modestly.

“Heaven knows what we should do without you.”

“Oh! we’re not so indispensable as all that,” said the hypnotist, ruminating the flavour of the jelly. “The world did very well without us for some thousands of years. Two hundred years ago even—not one! In practice, that is. Physicians by the thousand, of course—frightfully clumsy brutes for the most part, and following one another like sheep—but doctors of the mind, except a few empirical flounders there were none.”

He concentrated his mind on the jelly.

“But were people so sane—?” began Mwres.

The hypnotist shook his head. “It didn’t matter then if they were a bit silly or faddy. Life was so easy-going then. No competition worth speaking of—no pressure. A human being had to be very lopsided before anything happened. Then, you know, they clapped ’em away in what they called a lunatic asylum.”

“I know,” said Mwres. “In these confounded historical romances that every one is listening to, they always rescue a beautiful girl from an asylum or something of the sort. I don’t know if you attend to that rubbish.”

“I must confess I do,” said the hypnotist. “It carries one out of oneself to hear of those quaint, adventurous, half-civilised days of the nineteenth century, when men were stout and women simple. I like a good swaggering story before all things. Curious times they were, with their smutty railways and puffing

old iron trains, their rum little houses and their horse vehicles. I suppose you don't read books?"

"Dear, no!" said Mwres. "I went to a modern school and we had none of that old-fashioned nonsense. Phonographs are good enough for me."

"Of course," said the hypnotist, "of course"; and surveyed the table for his next choice. "You know," he said, helping himself to a dark blue confection that promised well, "in those days our business was scarcely thought of. I daresay if any one had told them that in two hundred years' time a class of men would be entirely occupied in impressing things upon the memory, effacing unpleasant ideas, controlling and overcoming instinctive but undesirable impulses, and so forth, by means of hypnotism, they would have refused to believe the thing possible. Few people knew that an order made during a mesmeric trance, even an order to forget or an order to desire, could be given so as to be obeyed after the trance was over. Yet there were men alive then who could have told them the thing was as absolutely certain to come about as—well, the transit of Venus."

"They knew of hypnotism, then?"

"Oh, dear, yes! They used it—for painless dentistry and things like that! This blue stuff is confoundedly good: what is it?"

"Haven't the faintest idea," said Mwres, "but I admit it's very good. Take some more."

The hypnotist repeated his praises, and there was an appreciative pause.

"Speaking of these historical romances," said Mwres, with an attempt at an easy, off-hand manner, "brings me—ah—to the matter I—ah—had in mind when I asked you—when I expressed a wish to see you." He paused and took a deep breath.

The hypnotist turned an attentive eye upon him, and continued eating.

"The fact is," said Mwres, "I have a—in fact a—"

daughter. Well, you know I have given her—ah—every educational advantage. Lectures—not a solitary lecturer of ability in the world but she has had a telephone direct, dancing, deportment, conversation, philosophy, art criticism. . . .” He indicated catholic culture by a gesture of his hand. “I had intended her to marry a very good friend of mine—Bindon of the Lighting Commission—plain little man, you know, and a bit unpleasant in some of his ways, but an excellent fellow really—an excellent fellow.”

“Yes,” said the hypnotist, “go on. How old is she?”

“Eighteen.”

“A dangerous age. Well?”

“Well: it seems that she has been indulging in these historical romances—excessively. Excessively. Even to the neglect of her philosophy. Filled her mind with unutterable nonsense about soldiers who fight—what is it?—Etruscans?”

“Egyptians.”

“Egyptians—very probably. Hack about with swords and revolvers and things—blood-shed galore—horrible!—and about young men on torpedo catchers who blow up—Spaniards, I fancy—and all sorts of irregular adventurers. And she has got it into her head that she must marry for Love, and that poor little Bindon—”

“I’ve met similar cases,” said the hypnotist. “Who is the other young man?”

Mwres maintained an appearance of resigned calm. “You may well ask,” he said. “He is”—and his voice sank with shame—“a mere attendant upon the stage on which the flying-machines from Paris alight. He has—as they say in the romances—good looks. He is quite young and very eccentric. Affects the antique—he can read and write! So can she. And instead of communicating by telephone, like sensible people, they write and deliver—what is it?”

“Notes?”

"No—not notes. . . . Ah—poems."

The hypnotist raised his eyebrows. "How did she meet him?"

"Tripped coming down from the flying-machine from Paris—and fell into his arms. The mischief was done in a moment!"

"Yes?"

"Well—that's all. Things must be stopped. That is what I want to consult you about. What must be done? What *can* be done? Of course I'm not a hypnotist; my knowledge is limited. But you—?"

"Hypnotism is not magic," said the man in green, putting both arms on the table.

"Oh, precisely! But still—!"

"People cannot be hypnotised without their consent. If she is able to stand out against marrying Bindon, she will probably stand out against being hypnotised. But if once she can be hypnotised—even by somebody else—the thing is done."

"You can—?"

"Oh, certainly! Once we get her amenable, then we can suggest that she *must* marry Bindon—that that is her fate; or that the young man is repulsive, and that when she sees him she will be giddy and faint, or any little thing of that sort. Or if we can get her into a sufficiently profound trance we can suggest that she should forget him altogether—"

"Precisely."

"But the problem is to get her hypnotised. Of course no sort of proposal or suggestion must come from you—because no doubt she already distrusts you in the matter."

The hypnotist leant his head upon his arm and thought.

"It's hard a man cannot dispose of his own daughter," said Mwres irrelevantly.

"You must give me the name and address of the young lady," said the hypnotist, "and any information

bearing upon the matter. And, by the bye, is there any money in the affair?"

Mwres hesitated.

"There's a sum—in fact, a considerable sum—invested in the Patent Road Company. From her mother. That's what makes the thing so exasperating."

"Exactly," said the hypnotist. And he proceeded to cross-examine Mwres on the entire affair.

It was a lengthy interview.

And meanwhile "Elizebe^θ Mwres," as she spelt her name, or "Elizabeth Morris," as a nineteenth-century person would have put it, was sitting in a quiet waiting-place beneath the great stage upon which the flying-machine from Paris descended. And beside her sat her slender, handsome lover reading her the poem he had written that morning while on duty upon the stage. When he had finished they sat for a time in silence; and then, as if for their special entertainment, the great machine that had come flying through the air from America that morning rushed down out of the sky.

At first it was a little oblong, faint and blue amidst the distant fleecy clouds; and then it grew swiftly large and white, and larger and whiter, until they could see the separate tiers of sails, each hundreds of feet wide, and the lank body they supported, and at last even the swinging seats of the passengers in a dotted row. Although it was falling it seemed to them to be rushing up the sky, and over the roof-spaces of the city below its shadow leapt towards them. They heard the whistling rush of the air about it and its yelling siren, shrill and swelling, to warn those who were on its landing-stage of its arrival. And abruptly the note fell down a couple of octaves, and it had passed, and the sky was clear and void, and she could turn her sweet eyes again to Denton at her side.

Their silence ended; and Denton, speaking in a little language of broken English that was, they fancied,

their private possession—though lovers have used such little languages since the world began—told her how they too would leap into the air one morning out of all the obstacles and difficulties about them, and fly to a sunlit city of delight he knew of in Japan, half-way about the world.

She loved the dream, but she feared the leap; and she put him off with "Some day, dearest one, some day," to all his pleading that it might be soon; and at last came a shrilling of whistles, and it was time for him to go back to his duties on the stage. They parted—as lovers have been wont to part for thousands of years. She walked down a passage to a lift, and so came to one of the streets of that latter-day London, all glazed in with glass from the weather, and with incessant moving platforms that went to all parts of the city. And by one of these she returned to her apartments in the Hotel for Women where she lived, the apartments that were in telephonic communication with all the best lecturers in the world. But the sunlight of the flying stage was in her heart, and the wisdom of all the best lecturers in the world seemed folly in that light.

She spent the middle part of the day in the gymnasium, and took her midday meal with two other girls and their common chaperone—for it was still the custom to have a chaperone in the case of motherless girls of the more prosperous classes. The chaperone had a visitor that day, a man in green and yellow, with a white face and vivid eyes, who talked amazingly. Among other things, he fell to praising a new historical romance that one of the great popular story-tellers of the day had just put forth. It was, of course, about the spacious times of Queen Victoria; and the author, among other pleasing novelties, made a little argument before each section of the story, in imitation of the chapter headings of the old-fashioned books: as for example, "How the Cabmen of Pimlico stopped

the Victoria Omnibuses, and of the Great Fight in Palace Yard," and "How the Piccadilly Policeman was slain in the midst of his Duty." The man in green and yellow praised this innovation. "These pithy sentences," he said, "are admirable. They show at a glance those headlong, tumultuous times, when men and animals jostled in the filthy streets, and death might wait for one at every corner. Life was life then! How great the world must have seemed then! How marvelous! There were still parts of the world absolutely unexplored. Nowadays we have almost abolished wonder, we lead lives so trim and orderly that courage, endurance, faith, all the noble virtues seem fading from mankind."

And so on, taking the girls' thoughts with him, until the life they led, life in the vast and intricate London of the twenty-second century, a life interspersed with soaring excursions to every part of the globe, seemed to them a monotonous misery compared with the dædal past.

At first Elizabeth did not join in the conversation, but after a time the subject became so interesting that she made a few shy interpolations. But he scarcely seemed to notice her as he talked. He went on to describe a new method of entertaining people. They were hypnotised, and then suggestions were made to them so skilfully that they seemed to be living in ancient times again. They played out a little romance in the past as vivid as reality, and when at last they awakened they remembered all they had been through as though it were a real thing.

"It is a thing we have sought to do for years and years," said the hypnotist. "It is practically an artificial dream. And we know the way at last. Think of all it opens out to us—the enrichment of our experience, the recovery of adventure, the refuge it offers from this sordid, competitive life in which we live! Think!"

"And you can do that!" said the chaperone eagerly.

"The thing is possible at last," the hypnotist said. "You may order a dream as you wish."

The chaperone was the first to be hypnotised, and the dream, she said, was wonderful, when she came to again.

The other two girls, encouraged by her enthusiasm, also placed themselves in the hands of the hypnotist and had plunges into the romantic past. No one suggested that Elizabeth should try this novel entertainment; it was at her own request at last that she was taken into that land of dreams where there is neither any freedom of choice nor will. . . .

And so the mischief was done.

One day, when Denton went down to that quiet seat beneath the flying stage, Elizabeth was not in her wonted place. He was disappointed, and a little angry. The next day she did not come, and the next also. He was afraid. To hide his fear from himself, he set to work to write sonnets for her when she should come again. . . .

For three days he fought against his dread by such distraction, and then the truth was before him clear and cold, and would not be denied. She might be ill, and she might be dead; but he would not believe that he had been betrayed. There followed a week of misery. And then he knew she was the only thing on earth worth having, and that he must seek her, however hopeless the search, until she was found once more.

He had some small private means of his own, and so he threw over his appointment on the flying stage, and set himself to find this girl who had become at last all the world to him. He did not know where she lived, and little of her circumstances; for it had been part of the delight of her girlish romance that he should know nothing of her, nothing of the difference of their station. The ways of the city opened before him east and west, north and south. Even in Victorian days London was a maze, that little London with its

poor four millions of people; but the London he explored, the London of the twenty-second century, was a London of thirty million souls. At first he was energetic and headlong, taking time neither to eat nor sleep. He sought for weeks and months, he went through every imaginable phase of fatigue and despair, over-excitement and anger. Long after hope was dead, by the sheer inertia of his desire he still went to and fro, peering into faces and looking this way and that, in the incessant ways and lifts and passages of that interminable hive of men.

At last chance was kind to him, and he saw her.

It was in a time of festivity. He was hungry; he had paid the inclusive fee and had gone into one of the gigantic dining-places of the city; he was pushing his way among the tables and scrutinising by mere force of habit every group he passed.

He stood still, robbed of all power of motion, his eyes wide, his lips apart. Elizabeth sat scarcely twenty yards away from him, looking straight at him. Her eyes were as hard to him, as hard and expressionless and void of recognition, as the eyes of a statue.

She looked at him for a moment, and then her gaze passed beyond him.

Had he had only her eyes to judge by he might have doubted if it was indeed Elizabeth, but he knew her by the gesture of her hand, by the grace of a wanton little curl that floated over her ear as she moved her head. Something was said to her, and she turned smiling tolerantly to the man beside her, a little man in foolish raiment knobbed and spiked like some odd reptile with pneumatic horns—the Bindon of her father's choice.

For a moment Denton stood white and wild-eyed; then came a terrible faintness, and he sat before one of the little tables. He sat down with his back to her, and for a time he did not dare to look at her again. When at last he did, she and Bindon and two

other people were standing up to go. The others were her father and her chaperone.

He sat as if incapable of action until the four figures were remote and small, and then he rose up possessed with the one idea of pursuit. For a space he feared he had lost them, and then he came upon Elizabeth and her chaperone again in one of the streets of moving platforms that intersected the city. Bindon and Mwres had disappeared.

He could not control himself to patience. He felt he must speak to her forthwith, or die. He pushed forward to where they were seated, and sat down beside them. His white face was convulsed with half-hysterical excitement.

He laid his hand on her wrist. "Elizabeth?" he said.

She turned in unfeigned astonishment. Nothing but the fear of a strange man showed in her face.

"Elizabeth," he cried, and his voice was strange to him: "dearest—you *know* me?"

Elizabeth's face showed nothing but alarm and perplexity. She drew herself away from him. The chaperone, a little grey-headed woman with mobile features, leant forward to intervene. Her resolute bright eyes examined Denton. "*What* do you say?" she asked.

"This young lady," said Denton,— "she knows me."

"Do you know him, dear?"

"No," said Elizabeth in a strange voice, and with a hand to her forehead, speaking almost as one who repeats a lesson. "No, I do not know him. I *know*— I do not know him."

"But—but . . . Not know me! It is I—Denton. Denton! To whom you used to talk. Don't you remember the flying stages? The little seat in the open air? The verses—"

"No," cried Elizabeth,— "no. I do not know him. I do not know him. There is something . . . But I

don't know. All I know is that I do not know him." Her face was a face of infinite distress.

The sharp eyes of the chaperone flitted to and fro from the girl to the man. "You see?" she said, with the faint shadow of a smile. "She does not know you."

"I do not know you," said Elizabeth. "Of that I am sure."

"But, dear—the songs—the little verses—"

"She does not know you," said the chaperone. "You must not . . . You have made a mistake. You must not go on talking to us after that. You must not annoy us on the public ways."

"But—" said Denton, and for a moment his miserably haggard face appealed against fate.

"You must not persist, young man," protested the chaperone.

"*Elizabeth!*" he cried.

Her face was the face of one who is tormented. "I do not know you," she cried, hand to brow. "Oh, I do not know you!"

For an instant Denton sat stunned. Then he stood up and groaned aloud.

He made a strange gesture of appeal towards the remote glass roof of the public way, then turned and went plunging recklessly from one moving platform to another, and vanished amidst the swarms of people going to and fro thereon. The chaperone's eyes followed him, and then she looked at the curious faces about her.

"Dear," asked Elizabeth, clasping her hand, and too deeply moved to heed observation, "who was that man? Who *was* that man?"

The chaperone raised her eyebrows. She spoke in a clear, audible voice. "Some half-witted creature. I have never set eyes on him before."

"Never?"

"Never, dear. Do not trouble your mind about a thing like this."

And soon after this the celebrated hypnotist who dressed in green and yellow had another client. The young man paced his consulting-room, pale and disordered. "I want to forget," he cried. "I *must* forget."

The hypnotist watched him with quiet eyes, studied his face and clothes and bearing. "To forget anything—pleasure or pain—is to be, by so much—*less*. However, you know your own concern. My fee is high."

"If only I can forget—"

"That's easy enough with you. You wish it. I've done much harder things. Quite recently. I hardly expected to do it: the thing was done against the will of the hypnotised person. A love affair too—like yours. A girl. So rest assured."

The young man came and sat beside the hypnotist. His manner was a forced calm. He looked into the hypnotist's eyes. "I will tell you. Of course you will want to know what it is. There was a girl. Her name was Elizabeth Mwres. Well . . ."

He stopped. He had seen the instant surprise on the hypnotist's face. In that instant he knew. He stood up. He seemed to dominate the seated figure by his side. He gripped the shoulder of green and gold. For a time he could not find words.

"*Give her me back!*" he said at last. "Give her me back!"

"What do you mean?" gasped the hypnotist.

"Give her me back."

"Give whom?"

"Elizabeth Mwres—the girl—"

The hypnotist tried to free himself; he rose to his feet. Denton's grip tightened.

"Let go!" cried the hypnotist, thrusting an arm against Denton's chest.

In a moment the two men were locked in a clumsy wrestle. Neither had the slightest training—for athleti-

cism, except for exhibition and to afford opportunity for betting, had faded out of the earth—but Denton was not only the younger but the stronger of the two. They swayed across the room, and then the hypnotist had gone down under his antagonist. They fell together. . . .

Denton leaped to his feet, dismayed at his own fury; but the hypnotist lay still, and suddenly from a little white mark where his forehead had struck a stool shot a hurrying band of red. For a space Denton stood over him irresolute, trembling.

A fear of the consequences entered his gently nurtured mind. He turned towards the door. "No," he said aloud, and came back to the middle of the room. Overcoming the instinctive repugnance of one who had seen no act of violence in all his life before, he knelt down beside his antagonist and felt his heart. Then he peered at the wound. He rose quietly and looked about him. He began to see more of the situation.

When presently the hypnotist recovered his senses, his head ached severely, his back was against Denton's knees and Denton was sponging his face.

The hypnotist did not speak. But presently he indicated by a gesture that in his opinion he had been sponged enough. "Let me get up," he said.

"Not yet," said Denton.

"You have assaulted me, you scoundrel!"

"We are alone," said Denton, "and the door is secure."

There was an interval of thought.

"Unless I sponge," said Denton, "your forehead will develop a tremendous bruise."

"You can go on sponging," said the hypnotist sulkily.

There was another pause.

"We might be in the Stone Age," said the hypnotist. "Violence! Struggle!"

"In the Stone Age no man dared to come between man and woman," said Denton.

The hypnotist thought again.

"What are you going to do?" he asked.

"While you were insensible I found the girl's address on your tablets. I did not know it before. I telephoned. She will be here soon. Then—"

"She will bring her chaperone."

"That is all right."

"But what—? I don't see. What do you mean to do?"

"I looked about for a weapon also. It is an astonishing thing how few weapons there are nowadays. If you consider that in the Stone Age men owned scarcely anything *but* weapons. I hit at last upon this lamp. I have wrenched off the wires and things, and I hold it so." He extended it over the hypnotist's shoulders. "With that I can quite easily smash your skull. I *will*—unless you do as I tell you."

"Violence is no remedy," said the hypnotist, quoting from the "Modern Man's Book of Moral Maxims."

"It's an undesirable disease," said Denton.

"Well?"

"You will tell that chaperone you are going to order the girl to marry that knobby little brute with the red hair and ferrety eyes. I believe that's how things stand?"

"Yes—that's how things stand."

"And, pretending to do that, you will restore her memory of me."

"It's unprofessional."

"Look here! If I cannot have that girl I would rather die than not. I don't propose to respect your little fancies. If anything goes wrong you shall not live five minutes. This is a rude makeshift of a weapon, and it may quite conceivably be painful to kill you. But I will. It is unusual, I know, nowadays to do things like this—mainly because there is so little in life that is worth being violent about."

"The chaperone will see you directly she comes—"

"I shall stand in that recess. Behind you."

The hypnotist thought. "You are a determined young man," he said, "and only half civilised. I have tried to do my duty to my client, but in this affair you seem likely to get your own way. . . ."

"You mean to deal straightly."

"I'm not going to risk having my brains scattered in a petty affair like this."

"And afterwards?"

"There is nothing a hypnotist or doctor hates so much as a scandal. I at least am no savage. I am annoyed. . . . But in a day or so I shall bear no malice. . . ."

"Thank you. And now that we understand each other, there is no necessity to keep you sitting any longer on the floor."

II.—*The Vacant Country*

The world, they say, changed more between the year 1800 and the year 1900 than it had done in the previous five hundred years. That century, the nineteenth century, was the dawn of a new epoch in the history of mankind—the epoch of the great cities, the end of the old order of country life.

In the beginning of the nineteenth century the majority of mankind still lived upon the countryside, as their way of life had been for countless generations. All over the world they dwelt in little towns and villages then, and engaged either directly in agriculture, or in occupations that were of service to the agriculturist. They travelled rarely, and dwelt close to their work, because swift means of transit had not yet come. The few who travelled went either on foot, or in slow sailing-ships, or by means of jogging horses incapable of more than sixty miles a day. Think of it!—sixty miles a day. Here and there, in those sluggish times, a town grew a little larger than its neighbours, as a port or as a centre of government; but all the towns in the world with more than a hundred thousand inhabi-

tants could be counted on a man's fingers. So it was in the beginning of the nineteenth century. By the end, the invention of railways, telegraphs, steamships, and complex agricultural machinery, had changed all these things: changed them beyond all hope of return. The vast shops, the varied pleasures, the countless conveniences of the larger towns were suddenly possible, and no sooner existed than they were brought into competition with the homely resources of the rural centres. Mankind were drawn to the cities by an overwhelming attraction. The demand for labour fell with the increase of machinery, the local markets were entirely superseded, and there was a rapid growth of the larger centres at the expense of the open country.

The flow of population townward was the constant preoccupation of Victorian writers. In Great Britain and New England, in India and China, the same thing was remarked: everywhere a few swollen towns were visibly replacing the ancient order. That this was an inevitable result of improved means of travel and transport—that, given swift means of transit, these things must be—was realised by few; and the most puerile schemes were devised to overcome the mysterious magnetism of the urban centres, and keep the people on the land.

Yet the developments of the nineteenth century were only the dawning of the new order. The first great cities of the new time were horribly inconvenient, darkened by smoky fogs, insanitary and noisy; but the discovery of new methods of building, new methods of heating, changed all this. Between 1900 and 2000 the march of change was still more rapid; and between 2000 and 2100 the continually accelerated progress of human invention made the reign of Victoria the Good seem at last an almost incredible vision of idyllic tranquil days.

The introduction of railways was only the first step in that development of those means of locomotion which

finally revolutionised human life. By the year 2000 railways and roads had vanished together. The railways, robbed of their rails, had become weedy ridges and ditches upon the face of the world; the old roads, strange barbaric tracks of flint and soil, hammered by hand or rolled by rough iron rollers, strewn with miscellaneous filth, and cut by iron hoofs and wheels into ruts and puddles often many inches deep, had been replaced by patent tracks made of a substance called Eadhamite. This Eadhamite—it was named after its patentee—ranks with the invention of printing and steam as one of the epoch-making discoveries of the world's history.

When Eadham discovered the substance, he probably thought of it as a mere cheap substitute for india-rubber; it cost a few shillings a ton. But you can never tell all an invention will do. It was the genius of a man named Warming that pointed to the possibility of using it, not only for the tires of wheels, but as a road substance, and who organised the enormous network of public ways that speedily covered the world.

These public ways were made with longitudinal divisions. On the outer on either side went foot cyclists and conveyances travelling at a less speed than twenty-five miles an hour; in the middle, motors capable of speed up to a hundred; and the inner, Warming (in the face of enormous ridicule) reserved for vehicles travelling at speeds of a hundred miles an hour and upward.

For ten years his inner ways were vacant. Before he died they were the most crowded of all, and vast light frameworks with wheels of twenty and thirty feet in diameter, hurled along them at paces that year after year rose steadily towards two hundred miles an hour. And by the time this revolution was accomplished, a parallel revolution had transformed the ever-growing cities. Before the development of practical science the fogs and filth of Victorian times vanished. Electric heating replaced fires (in 2013 the lighting of a fire

that did not absolutely consume its own smoke was made an indictable nuisance), and all the city ways, all public squares and places, were covered in with a recently invented glass-like substance. The roofing of London became practically continuous. Certain short-sighted and foolish legislation against tall buildings was abolished, and London, from a squat expanse of petty houses—feebly archaic in design—rose steadily towards the sky. To the municipal responsibility for water, light, and drainage, was added another, and that was ventilation.

But to tell of all the changes in human convenience that these two hundred years brought about, to tell of the long foreseen invention of flying, to describe how life in households was steadily supplanted by life in interminable hotels, how at last even those who were still concerned in agricultural work came to live in the towns and to go to and fro to their work every day, to describe how at last in all England only four towns remained, each with many millions of people, and how there were left no inhabited houses in all the countryside: to tell all this would take us far from our story of Denton and his Elizabeth. They had been separated and reunited, and still they could not marry. For Denton—it was his only fault—had no money. Neither had Elizabeth until she was twenty-one, and as yet she was only eighteen. At twenty-one all the property of her mother would come to her, for that was the custom of the time. She did not know that it was possible to anticipate her fortune, and Denton was far too delicate a lover to suggest such a thing. So things stuck hopelessly between them. Elizabeth said that she was very unhappy, and that nobody understood her but Denton, and that when she was away from him she was wretched; and Denton said that his heart longed for her day and night. And they met as often as they could to enjoy the discussion of their sorrows.

They met one day at their little seat upon the flying

stage. The precise site of this meeting was where in Victorian times the road from Wimbledon came out upon the common. They were, however, five hundred feet above that point. Their seat looked far over London. To convey the appearance of it all to a nineteenth-century reader would have been difficult. One would have had to tell him to think of the Crystal Palace, of the newly built "mammoth" hotels—as those little affairs were called—of the larger railway stations of his time, and to imagine such buildings enlarged to vast proportions and run together and continuous over the whole metropolitan area. If then he was told that this continuous roof-space bore a huge forest of rotating wind-wheels, he would have begun very dimly to appreciate what to these young people was the commonest sight in their lives.

To their eyes it had something of the quality of a prison, and they were talking, as they had talked a hundred times before, of how they might escape from it and be at last happy together: escape from it, that is, before the appointed three years were at an end. It was, they both agreed, not only impossible but almost wicked, to wait three years. "Before that," said Denton—and the notes of his voice told of a splendid chest—"we might both be dead!"

Their vigorous young hands had to grip at this, and then Elizabeth had a still more poignant thought that brought the tears from her wholesome eyes and down her healthy cheeks. "One of us," she said, "one of us might be—"

She choked; she could not say the word that is so terrible to the young and happy.

Yet to marry and be very poor in the cities of that time was—for any one who had lived pleasantly—a very dreadful thing. In the old agricultural days that had drawn to an end in the eighteenth century there had been a pretty proverb of love in a cottage; and indeed in those days the poor of the countryside had dwelt

in flower-covered, diamond-windowed cottages of thatch and plaster, with the sweet air and earth about them, amidst tangled hedges and the song of birds, and with the ever-changing sky overhead. But all this had changed (the change was already beginning in the nineteenth century), and a new sort of life was opening for the poor—in the lower quarters of the city.

In the nineteenth century the lower quarters were still beneath the sky; they were areas of land on clay or other unsuitable soil, liable to floods or exposed to the smoke of more fortunate districts, insufficiently supplied with water, and as insanitary as the great fear of infectious diseases felt by the wealthier classes permitted. In the twenty-second century, however, the growth of the city storey above storey, and the coalescence of buildings, had led to a different arrangement. The prosperous people lived in a vast series of sumptuous hotels in the upper storeys and halls of the city fabric; the industrial population dwelt beneath in the tremendous ground-floor and basement, so to speak, of the place.

In the refinement of life and manners these lower classes differed little from their ancestors, the East-enders of Queen Victoria's time; but they had developed a distinct dialect of their own. In these under ways they lived and died, rarely ascending to the surface except when work took them there. Since for most of them this was the sort of life to which they had been born, they found no great misery in such circumstances; but for people like Denton and Elizabeth, such a plunge would have seemed more terrible than death.

"And yet what else is there?" asked Elizabeth.

Denton professed not to know. Apart from his own feeling of delicacy, he was not sure how Elizabeth would like the idea of borrowing on the strength of her expectations.

The passage from London to Paris even, said Elizabeth, was beyond their means; and in Paris, as in any

other city in the world, life would be just as costly and impossible as in London.

Well might Denton cry aloud: "If only we had lived in those days, dearest! If only we had lived in the past!" For to their eyes even nineteenth-century Whitechapel was seen through a mist of romance.

"Is there *nothing*?" cried Elizabeth, suddenly weeping. "Must we really wait for those three long years? Fancy *three* years—six-and-thirty months!" The human capacity for patience had not grown with the ages.

Then suddenly Denton was moved to speak of something that had already flickered across his mind. He had hit upon it at last. It seemed to him so wild a suggestion that he made it only half seriously. But to put a thing into words has ever a way of making it seem more real and possible than it seemed before. And so it was with him.

"Suppose," he said, "we went into the country?"

She looked at him to see if he was serious in proposing such an adventure.

"The country?"

"Yes—beyond there. Beyond the hills."

"How could we live?" she said. "*Where* could we live?"

"It is not impossible," he said. "People used to live in the country."

"But then there were houses."

"There are the ruins of villages and towns now. On the clay lands they are gone, of course. But they are still left on the grazing land, because it does not pay the Food Company to remove them. I know that—for certain. Besides, one sees them from the flying machines, you know. Well, we might shelter in some one of these, and repair it with our hands. Do you know, the thing is not so wild as it seems. Some of the men who go out every day to look after the crops and herds might be paid to bring us food. . . ."

She stood in front of him. "How strange it would be if one really could. . . ."

"Why not?"

"But no one dares."

"That is no reason."

"It would be—oh! it would be so romantic and strange. If only it were possible."

"Why not possible?"

"There are so many things. Think of all the things we have, things that we should miss."

"Should we miss them? After all, the life we lead is very unreal—very artificial." He began to expand his idea, and as he warmed to his exposition the fantastic quality of his first proposal faded away.

She thought. "But I have heard of prowlers—escaped criminals."

He nodded. He hesitated over his answer because he thought it sounded boyish. He blushed. "I could get some one I know to make me a sword."

She looked at him with enthusiasm growing in her eyes. She had heard of swords, had seen one in a museum; she thought of those ancient days when men wore them as a common thing. His suggestion seemed an impossible dream to her, and perhaps for that reason she was eager for more detail. And inventing for the most part as he went along, he told her how they might live in the country as the old-world people had done. With every detail her interest grew, for she was one of those girls for whom romance and adventure have a fascination.

His suggestion seemed, I say, an impossible dream to her on that day, but the next day they talked about it again, and it was strangely less impossible.

"At first we should take food," said Denton. "We could carry food for ten or twelve days." It was an age of compact artificial nourishment, and such a provision had none of the unwieldy suggestion it would have had in the nineteenth century.

"But—until our house," she asked—"until it was ready, where should we sleep?"

"It is summer."

"But . . . What do you mean?"

"There was a time when there were no houses in the world; when all mankind slept always in the open air."

"But for us! The emptiness! No walls—no ceiling!"

"Dear," he said, "in London you have many beautiful ceilings. Artists paint them and stud them with lights. But I have seen a ceiling more beautiful than any in London. . . ."

"But where?"

"It is the ceiling under which we two would be alone. . . ."

"You mean . . .?"

"Dear," he said, "it is something the world has forgotten. It is Heaven and all the host of stars."

Each time they talked the thing seemed more possible and more desirable to them. In a week or so it was quite possible. Another week, and it was the inevitable thing they had to do. A great enthusiasm for the country seized hold of them and possessed them. The sordid tumult of the town, they said, overwhelmed them. They marvelled that this simple way out of their troubles had never come upon them before.

One morning near Midsummer-day, there was a new minor official upon the flying stage, and Denton's place was to know him no more.

Our two young people had secretly married, and were going forth manfully out of the city in which they and their ancestors before them had lived all their days. She wore a new dress of white cut in an old-fashioned pattern, and he had a bundle of provisions strapped athwart his back, and in his hand he carried—rather shamefacedly it is true, and under his purple cloak—

an implement of archaic form, a cross-hilted thing of tempered steel.

Imagine that going forth! In their days the sprawling suburbs of Victorian times with their vile roads, petty houses, foolish little gardens of shrub and geranium, and all their futile, pretentious privacies, had disappeared: the towering buildings of the new age, the mechanical ways, the electric and water mains, all came to an end together, like a wall, like a cliff, near four hundred feet in height, abrupt and sheer. All about the city spread the carrot, swede, and turnip fields of the Food Company, vegetables that were the basis of a thousand varied foods, and weeds and hedgerow tangles had been utterly extirpated. The incessant expense of weeding that went on year after year in the petty, wasteful and barbaric farming of the ancient days, the Food Company had economised for ever more by a campaign of extermination. Here and there, however, neat rows of bramble standards and apple trees with whitewashed stems, intersected the fields, and at places groups of gigantic teasles reared their favoured spikes. Here and there huge agricultural machines hunched under waterproof covers. The mingled waters of the Wey and Mole and Wandle ran in rectangular channels; and wherever a gentle elevation of the ground permitted a fountain of deodorised sewage distributed its benefits athwart the land and made a rainbow of the sunlight.

By a great archway in that enormous city wall emerged the Eadhamite road to Portsmouth, swarming in the morning sunshine with an enormous traffic bearing the blue-clad servants of the Food Company to their toil. A rushing traffic, beside which they seemed two scarce-moving dots. Along the outer tracks hummed and rattled the tardy little old-fashioned motors of such as had duties within twenty miles or so of the city; the inner ways were filled with vaster mechanisms—swift monocycles bearing a score of men, lank multi-

cycles, quadricycles sagging with heavy loads, empty gigantic produce carts that would come back again filled before the sun was setting, all with throbbing engines and noiseless wheels and a perpetual wild melody of horns and gongs.

Along the very verge of the outermost way our young people went in silence, newly wed and oddly shy of one another's company. Many were the things shouted to them as they tramped along, for in 2100 a foot-passenger on an English road was almost as strange a sight as a motor car would have been in 1800. But they went on with steadfast eyes into the country, paying no heed to such cries.

Before them in the south rose the Downs, blue at first, and as they came nearer changing to green, surmounted by the row of gigantic wind-wheels that supplemented the wind-wheels upon the roof-spaces of the city, and broken and restless with the long morning shadows of those whirling vanes. By midday they had come so near that they could see here and there little patches of pallid dots—the sheep the Meat Department of the Food Company owned. In another hour they had passed the clay and the root crops and the single fence that hedged them in, and the prohibition against trespass no longer held: the levelled roadway plunged into a cutting with all its traffic, and they could leave it and walk over the greensward and up the open hillside.

Never had these children of the latter days been together in such a lonely place.

They were both very hungry and footsore—for walking was a rare exercise—and presently they sat down on the weedless, close-cropped grass, and looked back for the first time at the city from which they had come, shining wide and splendid in the blue haze of the valley of the Thames. Elizabeth was a little afraid of the unenclosed sheep away up the slope—she had never been near big unrestrained animals before—but

Denton reassured her. And overhead a white-winged bird circled in the blue.

They talked but little until they had eaten, and then their tongues were loosened. He spoke of the happiness that was now certainly theirs, of the folly of not breaking sooner out of that magnificent prison of latter-day life, of the old romantic days that had passed from the world for ever. And then he became boastful. He took up the sword that lay on the ground beside him, and she took it from his hand and ran a tremulous finger along the blade.

"And you could," she said, "*you*—could raise this and strike a man?"

"Why not? If there were need."

"But," she said, "it seems so horrible. It would slash. . . . There would be"—her voice sank,—"*blood.*"

"In the old romances you have read often enough . . ."

"Oh, I know: in those—yes. But that is different. One knows it is not blood, but just a sort of red ink . . . And *you*—killing!"

She looked at him doubtfully, and then handed him back the sword.

After they had rested and eaten, they rose up and went on their way towards the hills. They passed quite close to a huge flock of sheep, who stared and bleated at their unaccustomed figures. She had never seen sheep before, and she shivered to think such gentle things must needs be slain for food. A sheep-dog barked from a distance, and then a shepherd appeared amidst the supports of the wind-wheels, and came down towards them.

When he drew near he called out asking whither they were going.

Denton hesitated, and told him briefly that they sought some ruined house among the Downs, in which they might live together. He tried to speak in an off-

hand manner, as though it was a usual thing to do. The man stared incredulously.

"Have you *done* anything?" he asked.

"Nothing," said Denton. "Only we don't want to live in a city any longer. Why should we live in cities?"

The shepherd stared more incredulously than ever. "You can't live here," he said.

"We mean to try."

The shepherd stared from one to the other. "You'll go back to-morrow," he said. "It looks pleasant enough in the sunlight. . . . Are you sure you've done nothing? We shepherds are not such *great* friends of the police."

Denton looked at him steadfastly. "No," he said. "But we are too poor to live in the city, and we can't bear the thought of wearing clothes of blue canvas and doing drudgery. We are going to live a simple life here, like the people of old."

The shepherd was a bearded man with a thoughtful face. He glanced at Elizabeth's fragile beauty.

"*They* had simple minds," he said.

"So have we," said Denton.

The shepherd smiled.

"If you go along here," he said, "along the crest beneath the wind-wheels, you will see a heap of mounds and ruins on your right-hand side. That was once a town called Epsom. There are no houses there, and the bricks have been used for a sheep pen. Go on, and another heap on the edge of the root-land is Leather-head; and then the hill turns away along the border of a valley, and there are woods of beech. Keep along the crest. You will come to quite wild places. In some parts, in spite of all the weeding that is done, ferns and bluebells and other such useless plants are growing still. And through it all underneath the wind-wheels runs a straight lane paved with stones, a road-way of the Romans two thousand years old. Go to

the right of that, down into the valley and follow it along by the banks of the river. You come presently to a street of houses, many with the roofs still sound upon them. There you may find shelter."

They thanked him.

"But it's a quiet place. There is no light after dark there, and I have heard tell of robbers. It is lonely. Nothing happens there. The phonographs of the story-tellers, the kinematograph entertainments, the news machines—none of them are to be found there. If you are hungry there is no food, if you are ill no doctor. . . ." He stopped.

"We shall try it," said Denton, moving to go on. Then a thought struck him, and he made an agreement with the shepherd, and learnt where they might find him, to buy and bring them anything of which they stood in need, out of the city.

And in the evening they came to the deserted village, with its houses that seemed so small and odd to them: they found it golden in the glory of the sunset, and desolate and still. They went from one deserted house to another, marvelling at their quaint simplicity, and debating which they should choose. And at last, in a sunlit corner of a room that had lost its outer wall, they came upon a wild flower, a little flower of blue that the weeders of the Food Company had overlooked.

That house they decided upon; but they did not remain in it long that night, because they were resolved to feast upon nature. And moreover the houses became very gaunt and shadowy after the sunlight had faded out of the sky. So after they had rested a little time they went to the crest of the hill again to see with their own eyes the silence of heaven set with stars, about which the old poets had had so many things to tell. It was a wonderful sight, and Denton talked like the stars, and when they went down the hill at last the sky was pale with dawn. They slept but little, and in

the morning when they woke a thrush was singing in a tree.

So these young people of the twenty-second century began their exile. That morning they were very busy exploring the resources of this new home in which they were going to live the simple life. They did not explore very fast or very far, because they went everywhere hand-in-hand; but they found the beginnings of some furniture. Beyond the village was a store of winter fodder for the sheep of the Food Company, and Denton dragged great armfuls to the house to make a bed; and in several of the houses were old fungus-eaten chairs and tables—rough, barbaric, clumsy furniture, it seemed to them, and made of wood. They repeated many of the things they had said on the previous day, and towards evening they found another flower, a harebell. In the late afternoon some Company shepherds went down the river valley riding on a big multicyle; but they hid from them, because their presence, Elizabeth said, seemed to spoil the romance of this old-world place altogether.

In this fashion they lived a week. For all that week the days were cloudless, and the nights, nights of starry glory, that were invaded each a little more by a crescent moon.

Yet something of the first splendour of their coming faded—faded imperceptibly day after day; Denton's eloquence became fitful, and lacked fresh topics of inspiration; the fatigue of their long march from London told in a certain stiffness of the limbs, and each suffered from a slight unaccountable cold. Moreover, Denton became aware of unoccupied time. In one place among the carelessly heaped lumber of the old times he found a rust-eaten spade, and with this he made a fitful attack on the razed and grass-grown garden—though he had nothing to plant or sow. He returned to Elizabeth with a sweat-streaming face, after half an hour of such work.

"There were giants in those days," he said, not understanding what went and training will do. And their walk that day led them along the hills until they could see the city shimmering far away in the valley. "I wonder how things are going on there," he said.

And then came a change in the weather. "Come out and see the clouds," she cried; and behold! they were a sombre purple in the north and east, streaming up to ragged edges at the zenith. And as they went up the hill these hurrying streamers blotted out the sunset. Suddenly the wind set the beech-trees swaying and whispering, and Elizabeth shivered. And then far away the lightning flashed, flashed like a sword that is drawn suddenly, and the distant thunder marched about the sky, and even as they stood astonished, pattering upon them came the first headlong raindrops of the storm. In an instant the last streak of sunset was hidden by a falling curtain of hail, and the lightning flashed again, and the voice of the thunder roared louder, and all about them the world scowled dark and strange.

Seizing hands, these children of the city ran down the hill to their home, in infinite astonishment. And ere they reached it, Elizabeth was weeping with dismay, and the darkling ground about them was white and brittle and active with the pelting hail.

Then began a strange and terrible night for them. For the first time in their civilised lives they were in absolute darkness; they were wet and cold and shivering, all about them hissed the hail, and through the long neglected ceilings of the derelict home came noisy spouts of water and formed pools and rivulets on the creaking floors. As the gusts of the storm struck the worn-out building, it groaned and shuddered, and now a mass of plaster from the wall would slide and smash, and now some loosened tile would rattle down the roof and crash into the empty greenhouse below. Elizabeth shuddered, and was still; Denton wrapped his gay and flimsy city cloak about her, and so they crouched

in the darkness. And ever the thunder broke louder and nearer, and ever more lurid flashed the lightning, jerking into a momentary gaunt clearness the steaming, dripping room in which they sheltered.

Never before had they been in the open air save when the sun was shining. All their time had been spent in the warm and airy ways and halls and rooms of the latter-day city. It was to them that night as if they were in some other world, some disordered chaos of stress and tumult, and almost beyond hoping that they should ever see the city ways again.

The storm seemed to last interminably, until at last they dozed between the thunderclaps, and then very swiftly it fell and ceased. And as the last patter of the rain died away they heard an unfamiliar sound.

"What is that?" cried Elizabeth.

It came again. It was the barking of dogs. It drove down the desert lane and passed; and through the window, whitening the wall before them and throwing upon it the shadow of the window-frame and of a tree in black silhouette, shone the light of the waxing moon. . . .

Just as the pale dawn was drawing the things about them into sight, the fitful barking of dogs came near again, and stopped. They listened. After a pause they heard the quick pattering of feet seeking round the house, and short, half-smothered barks. Then again everything was still.

"Ssh!" whispered Elizabeth, and pointed to the door of their room.

Denton went half-way towards the door, and stood listening. He came back with a face of affected unconcern. "They must be the sheep-dogs of the Food Company," he said. "They will do us no harm."

He sat down again beside her. "What a night it has been!" he said, to hide how keenly he was listening.

"I don't like dogs," answered Elizabeth, after a long silence.

"Dogs never hurt any one," said Denton. "In the old days—in the nineteenth century—everybody had a dog."

"There was a romance I heard once. A dog killed a man."

"Not this sort of dog," said Denton confidently. "Some of those romances—are exaggerated."

Suddenly a half bark and a pattering up the staircase; the sound of panting. Denton sprang to his feet and drew the sword out of the damp straw upon which they had been lying. Then in the doorway appeared a gaunt sheep-dog, and halted there. Behind it stared another. For an instant man and brute faced each other, hesitating.

Then Denton, being ignorant of dogs, made a sharp step forward. "Go away," he said, with a clumsy motion of his sword.

The dog started and growled. Denton stopped sharply. "Good dog!" he said.

The growling jerked into a bark.

"Good dog!" said Denton. The second dog growled and barked. A third out of sight down the staircase took up the barking also. Outside others gave tongue—a large number it seemed to Denton.

"This is annoying," said Denton, without taking his eye off the brutes before him. "Of course the shepherds won't come out of the city for hours yet. Naturally these dogs don't quite make us out."

"I can't hear," shouted Elizabeth. She stood up and came to him.

Denton tried again, but the barking still drowned his voice. The sound had a curious effect upon his blood. Odd disused emotions began to stir; his face changed as he shouted. He tried again; the barking seemed to mock him, and one dog danced a pace forward, bristling. Suddenly he turned, and uttering certain words in the dialect of the underways, words incomprehensible to Elizabeth, he made for the dogs.

There was a sudden cessation of the barking, a growl and a snapping. Elizabeth saw the snarling head of the foremost dog, its white teeth and retracted ears, and the flash of the thrust blade. The brute leapt into the air and was flung back.

Then Denton, with a shout, was driving the dogs before him. The sword flashed above his head with a sudden new freedom of gesture, and then he vanished down the staircase. She made six steps to follow him, and on the landing there was blood. She stopped, and hearing the tumult of dogs and Denton's shouts pass out of the house, ran to the window.

Nine wolfish sheep-dogs were scattering, one writhed before the porch; and Denton, tasting that strange delight of combat that slumbers still in the blood of even the most civilised man, was shouting and running across the garden space. And then she saw something that for a moment he did not see. The dogs circled round this way and that, and came again. They had him in the open.

In an instant she divined the situation. She would have called to him. For a moment she felt sick and helpless, and then, obeying a strange impulse, she gathered up her white skirt and ran downstairs. In the hall was the rusting spade. That was it! She seized it and ran out.

She came none too soon. One dog rolled before him, well-nigh slashed in half; but a second had him by the thigh, a third gripped his collar behind, and a fourth had the blade of the sword between his teeth, tasting its own blood. He parried the leap of a fifth with his left arm.

It might have been the first century instead of the twenty-second, so far as she was concerned. All the gentleness of her eighteen years of city life vanished before this primordial need. The spade smote hard and sure, and cleft a dog's skull. Another, crouching for a spring, yelped with dismay at this unexpected antagonist,

and rushed aside. Two wasted precious moments on the binding of a feminine skirt.

The collar of Denton's cloak tore and parted as he staggered back; and that dog too felt the spade, and ceased to trouble him. He sheathed his sword in the brute at his thigh.

"To the wall!" cried Elizabeth; and in three seconds the fight was at an end, and our young people stood side by side, while a remnant of five dogs, with ears and tails of disaster, fled shamefully from the stricken field.

For a moment they stood panting and victorious, and then Elizabeth, dropping her spade, covered her face, and sank to the ground in a paroxysm of weeping. Denton looked about him, thrust the point of his sword into the ground so that it was at hand, and stooped to comfort her.

At last their more tumultuous emotions subsided, and they could talk again. She leant upon the wall, and he sat upon it so that he could keep an eye open for any returning dogs. Two, at any rate, were up on the hillside and keeping up a vexatious barking.

She was tear-stained, but not very wretched now, because for half an hour he had been repeating that she was brave and had saved his life. But a new fear was growing in her mind.

"They are the dogs of the Food Company," she said. "There will be trouble."

"I am afraid so. Very likely they will prosecute us for trespass."

A pause.

"In the old times," he said, "this sort of thing happened day after day."

"Last night!" she said. "I could not live through another such night."

He looked at her. Her face was pale for want of sleep, and drawn and haggard. He came to a sudden resolution. "We must go back," he said.

She looked at the dead dogs, and shivered. "We cannot stay here," she said.

"We must go back," he repeated, glancing over his shoulder to see if the enemy kept their distance. "We have been happy for a time. . . . But the world is too civilised. Ours is the age of cities. More of this will kill us."

"But what are we to do? How can we live there?"

Denton hesitated. His heel kicked against the wall on which he sat. "It's a thing I haven't mentioned before," he said, and coughed; "but . . ."

"Yes?"

"You could raise money on your expectations," he said.

"Could I?" she said eagerly.

"Of course you could. What a child you are!"

She stood up, and her face was bright. "Why did you not tell me before?" she asked. "And all this time we have been here!"

He looked at her for a moment, and smiled. Then the smile vanished. "I thought it ought to come from you," he said. "I didn't like to ask for your money. And besides—at first I thought this would be rather fine."

There was a pause.

"It *has* been fine," he said; and glanced once more over his shoulder. "Until all this began."

"Yes," she said, "those first days. The first three days."

They looked for a space into one another's faces, and then Denton slid down from the wall and took her hand.

"To each generation," he said, "the life of its time. I see it all plainly now. In the city—that is the life to which we were born. To live in any other fashion . . . Coming here was a dream, and this—is the awakening."

"It was a pleasant dream," she said,—“in the beginning.”

For a long space neither spoke.

"If we would reach the city before the shepherds come here, we must start," said Denton. "We must get our food out of the house and eat as we go."

Denton glanced about him again, and, giving the dead dogs a wide berth, they walked across the garden space and into the house together. They found the wallet with their food, and descended the blood-stained stairs again. In the hall Elizabeth stopped. "One minute," she said. "There is something here."

She led the way into the room in which that one little blue flower was blooming. She stooped to it, she touched it with her hand.

"I want it," she said; and then, "I cannot take it. . . ."

Impulsively she stooped and kissed its petals.

Then silently, side by side, they went across the empty garden-space into the old high road, and set their faces resolutely towards the distant city—towards the complex mechanical city of those latter days, the city that had swallowed up mankind.

III.—*The Ways of the City*

Prominent if not paramount among world-changing inventions in the history of man is that series of contrivances in locomotion that began with the railway and ended for a century or more with the motor and the patent road. That these contrivances, together with the device of limited liability joint stock companies and the supersession of agricultural labourers by skilled men with ingenious machinery, would necessarily concentrate mankind in cities of unparalleled magnitude and work an entire revolution in human life, became, after the event, a thing so obvious that it is a matter

of astonishment it was not more clearly anticipated. Yet that any steps should be taken to anticipate the miseries such a revolution might entail does not appear even to have been suggested; and the idea that the moral prohibitions and sanctions, the privileges and concessions, the conception of property and responsibility, of comfort and beauty, that had rendered the mainly agricultural states of the past prosperous and happy, would fail in the rising torrent of novel opportunities and novel stimulations, never seems to have entered the nineteenth-century mind. That a citizen, kindly and fair in his ordinary life, could as a shareholder become almost murderously greedy; that commercial methods that were reasonable and honourable on the old-fashioned countryside, should on an enlarged scale be deadly and overwhelming; that ancient charity was modern pauperisation, and ancient employment modern sweating; that, in fact, a revision and enlargement of the duties and rights of man had become urgently necessary, were things it could not entertain, nourished as it was on an archaic system of education and profoundly retrospective and legal in all its habits of thought. It was known that the accumulation of men in cities involved unprecedented dangers of pestilence; there was an energetic development of sanitation; but that the diseases of gambling and usury, of luxury and tyranny should become endemic, and produce horrible consequences was beyond the scope of nineteenth-century thought. And so, as if it were some inorganic process, practically unhindered by the creative will of man, the growth of the swarming unhappy cities that mark the twenty-first century accomplished itself.

The new society was divided into three main classes. At the summit slumbered the property owner, enormously rich by accident rather than design, potent save for the will and aim, the last *avatar* of Hamlet in the world. Below was the enormous multitude of workers employed by the gigantic companies that monopolised control; and

between these two the dwindling middle class, officials of innumerable sorts, foremen, managers, the medical, legal, artistic, and scholastic classes, and the minor rich, a middle class whose members led a life of insecure luxury and precarious speculation amidst the movements of the great managers.

Already the love story and the marrying of two persons of this middle class have been told: how they overcame the obstacles between them, and how they tried the simple old-fashioned way of living on the countryside and came back speedily enough into the city of London. Denton had no means, so Elizabeth borrowed money on the securities that her father Mwres held in trust for her until she was one-and-twenty.

The rate of interest she paid was of course high, because of the uncertainty of her security, and the arithmetic of lovers is often sketchy and optimistic. Yet they had very glorious times after that return. They determined they would not go to a Pleasure city nor waste their days rushing through the air from one part of the world to the other, for in spite of one disillusionment, their tastes were still old-fashioned. They furnished their little room with quaint old Victorian furniture, and found a shop on the forty-second floor in Seventh Way where printed books of the old sort were still to be bought. It was their pet affectation to read print instead of hearing phonographs. And when presently there came a sweet little girl, to unite them further if it were possible, Elizabeth would not send it to a *Creche*, as the custom was, but insisted on nursing it at home. The rent of their apartments was raised on account of this singular proceeding, but that they did not mind. It only meant borrowing a little more.

Presently Elizabeth was of age, and Denton had a business interview with her father that was not agreeable. An exceedingly disagreeable interview with their

money-lender followed, from which he brought home a white face. On his return Elizabeth had to tell him of a new and marvellous intonation of "Goo" that their daughter had devised, but Denton was inattentive. In the midst, just as she was at the cream of her description, he interrupted. "How much money do you think we have left, now that everything is settled?"

She stared and stopped her appreciative swaying of the Goo genius that had accompanied her description.

"You don't mean . . .?"

"Yes," he answered. "Ever so much. We have been wild. It's the interest. Or something. And the shares you had, slumped. Your father did not mind. Said it was not his business, after what had happened. He's going to marry again. . . . Well—we have scarcely a thousand left!"

"Only a thousand?"

"Only a thousand."

And Elizabeth sat down. For a moment she regarded him with a white face, then her eyes went about the quaint, old-fashioned room, with its middle Victorian furniture and genuine oleographs, and rested at last on the little lump of humanity within her arms.

Denton glanced at her and stood downcast. Then he swung round on his heel and walked up and down very rapidly.

"I must get something to do," he broke out presently. "I am an idle scoundrel. I ought to have thought of this before. I have been a selfish fool. I wanted to be with you all day . . ."

He stopped, looking at her white face. Suddenly he came and kissed her and the little face that nestled against her breast.

"It's all right, dear," he said, standing over her; "you won't be lonely now—now Dings is beginning to talk to you. And I can soon get something to do, you know. Soon . . . Easily . . . It's only a shock

at first. But it will come all right. It's sure to come right. I will go out again as soon as I have rested, and find what can be done. For the present it's hard to think of anything . . ."

"It would be hard to leave these rooms," said Elizabeth; "but—"

"There won't be any need of that—trust me."

"They are expensive."

Denton waved that aside. He began talking of the work he could do. He was not very explicit what it would be; but he was quite sure that there was something to keep them comfortably in the happy middle class, whose way of life was the only one they knew.

"There are three-and-thirty million people in London," he said: "some of them *must* have need of me."

"Some *must*."

"The trouble is . . . Well—Bindon, that brown little old man your father wanted you to marry. He's an important person. . . . I can't go back to my flying-stage work, because he is now a Commissioner of the Flying Stage Clerks."

"I didn't know that," said Elizabeth.

"He was made that in the last few weeks . . . or things would be easy enough, for they liked me on the flying stage. But there's dozens of other things to be done—dozens. Don't you worry, dear. I'll rest a little while, and then we'll dine, and then I'll start on my rounds. I know lots of people—lots."

So they rested, and then they went to the public dining-room and dined, and then he started on his search for employment. But they soon realised that in the matter of one convenience the world was just as badly off as it had ever been, and that was a nice, secure, honourable, remunerative employment, leaving ample leisure for the private life, and demanding no special ability, no violent exertion nor risk, and no sacrifice of any sort for its attainment. He evolved a number

of brilliant projects, and spent many days hurrying from one part of the enormous city to another in search of influential friends; and all his influential friends were glad to see him, and very sanguine until it came to definite proposals, and then they became guarded and vague. He would part with them coldly, and think over their behaviour, and get irritated on his way back, and stop at some telephone office and spend money on an animated but unprofitable quarrel. And as the days passed, he got so worried and irritated that even to seem kind and careless before Elizabeth cost him an effort—as she, being a loving woman, perceived very clearly.

After an extremely complex preface one day, she helped him out with a painful suggestion. He had expected her to weep and give way to despair when it came to selling all their joyfully bought early Victorian treasures, their quaint objects of art, their antimacassars, bead mats, repp curtains, veneered furniture, gold-framed steel engravings and pencil drawings, wax flowers under shades, stuffed birds, and all sorts of choice old things; but it was she who made the proposal. The sacrifice seemed to fill her with pleasure, and so did the idea of shifting to apartments ten or twelve floors lower in another hotel. "So long as Dings is with us, nothing matters," she said. "It's all experience." So he kissed her, said she was braver than when she fought the sheep-dogs, called her Boadicea, and abstained very carefully from reminding her that they would have to pay a considerably higher rent on account of the little voice with which Dings greeted the perpetual uproar of the city.

His idea had been to get Elizabeth out of the way when it came to selling the absurd furniture about which their affections were twined and tangled; but when it came to the sale it was Elizabeth who haggled with the dealer while Denton went about the running ways of the city, white and sick with sorrow and

the fear of what was still to come. When they moved into their sparsely furnished pink-and-white apartments in a cheap hotel, there came an outbreak of furious energy on his part, and then nearly a week of lethargy during which he sulked at home. Through those days Elizabeth shone like a star, and at the end Denton's misery found a vent in tears. And then he went out into the city ways again, and—to his utter amazement—found some work to do.

His standard of employment had fallen steadily until at last it had reached the lowest level of independent workers. At first he had aspired to some high official position in the great Flying or Windvane or Water Companies, or to an appointment on one of the General Intelligence Organisations that had replaced newspapers, or to some professional partnership, but those were the dreams of the beginning. From that he had passed to speculation, and three hundred gold "lions" out of Elizabeth's thousand had vanished one evening in the share market. Now he was glad his good looks secured him a trial in the position of salesman to the Suzannah Hat Syndicate, a Syndicate dealing in ladies' caps, hair decorations, and hats—for though the city was completely covered in, ladies still wore extremely elaborate and beautiful hats at the theatres and places of public worship.

It would have been amusing if one could have confronted a Regent Street shopkeeper of the nineteenth century with the development of his establishment in which Denton's duties lay. Nineteenth Way was still sometimes called Regent Street, but it was now a street of moving platforms and nearly eight hundred feet wide. The middle space was immovable and gave access by staircases descending into subterranean ways to the houses on either side. Right and left were an ascending series of continuous platforms each of which travelled about five miles an hour faster than the one internal to it, so that one could step from platform to

platform until one reached the swiftest outer way and so go about the city. The establishment of the Suzannah Hat Syndicate projected a vast *façade* upon the outer way, sending out overhead at either end an overlapping series of huge white glass screens, on which gigantic animated pictures of the faces of well-known beautiful living women wearing novelties in hats were thrown. A dense crowd was always collected in the stationary central way watching a vast kinematograph which displayed the changing fashion. The whole front of the building was in perpetual chromatic change, and all down the *façade*—four hundred feet it measured—and all across the street of moving ways, laced and winked and glittered in a thousand varieties of colour and lettering the inscription—

SUZANNA! 'ETS! SUZANNA! 'ETS!

A broadside of gigantic phonographs drowned all conversation in the moving way and roared "*hats*" at the passer-by, while far down the street and up, other batteries counselled the public to "walk down for Suzannah," and queried, "Why *don't* you buy the girl a hat?"

For the benefit of those who chanced to be deaf—and deafness was not uncommon in the London of that age, inscriptions of all sizes were thrown from the roof above upon the moving platforms themselves, and on one's hand or on the bald head of the man before one, or on a lady's shoulders, or in a sudden jet of flame before one's feet, the moving finger wrote in unanticipated letters of fire "*'ets r chip t'de,*" or simply "*'ets.*" And spite of all these efforts so high was the pitch at which the city lived, so trained became one's eyes and ears to ignore all sorts of advertisement, that many a citizen had passed that place thousands of times and was still unaware of the existence of the Suzannah Hat Syndicate.

To enter the building one descended the staircase in the middle way and walked through a public passage in which pretty girls promenaded, girls who were willing to wear a ticketed hat for a small fee. The entrance chamber was a large hall in which wax heads fashionably adorned rotated gracefully upon pedestals, and from this one passed through a cash office to an interminable series of little rooms, each room with its salesman, its three or four hats and pins, its mirrors, its kinematographs, telephones and hat slides in communication with the central depôt, its comfortable lounge and tempting refreshments. A salesman in such an apartment did Denton now become. It was his business to attend to any of the incessant stream of ladies who chose to stop with him, to behave as winningly as possible, to offer refreshment, to converse on any topic the possible customer chose, and to guide the conversation dexterously but not insistently towards hats. He was to suggest trying on various types of hat and to show by his manner and bearing, but without any coarse flattery, the enhanced impression made by the hats he wished to sell. He had several mirrors, adapted by various subtleties of curvature and tint to different types of face and complexion, and much depended on the proper use of these.

Denton flung himself at these curious and not very congenial duties with a good will and energy that would have amazed him a year before; but all to no purpose. The Senior Manageress, who had selected him for appointment and conferred various small marks of favour upon him, suddenly changed in her manner, declared for no assignable cause that he was stupid, and dismissed him at the end of six weeks of salesmanship. So Denton had to resume his ineffectual search for employment.

This second search did not last very long. Their money was at the ebb. To eke it out a little longer they resolved to part with their darling Dings, and took that small person to one of the public *creches* that

abounded in the city. That was the common use of the time. The industrial emancipation of women, the correlated disorganisation of the secluded "home," had rendered *creches* a necessity for all but very rich and exceptionally-minded people. Therein children encountered hygienic and educational advantages impossible without such organisation. *Creches* were of all classes and types of luxury, down to those of the Labour Company, where children were taken on credit, to be redeemed in labour as they grew up.

But both Denton and Elizabeth being, as I have explained, strange old-fashioned young people, full of nineteenth-century ideas, hated these convenient *creches* exceedingly and at last took their little daughter to one with extreme reluctance. They were received by a motherly person in a uniform who was very brisk and prompt in her manner until Elizabeth wept at the mention of parting from her child. The motherly person, after a brief astonishment at this unusual emotion, changed suddenly into a creature of hope and comfort, and so won Elizabeth's gratitude for life. They were conducted into a vast room presided over by several nurses and with hundreds of two-year-old girls grouped about the toy-covered floor. This was the Two-year-old Room. Two nurses came forward, and Elizabeth watched their bearing towards Dings with jealous eyes. They were kind—it was clear they felt kind, and yet . . .

Presently it was time to go. By that time Dings was happily established in a corner, sitting on the floor with her arms filled, and herself, indeed, for the most part hidden by an unaccustomed wealth of toys. She seemed careless of all human relationships as her parents receded.

They were forbidden to upset her by saying good-bye.

At the door Elizabeth glanced back for the last time, and behold! Dings had dropped her new wealth and

was standing with a dubious face. Suddenly Elizabeth gasped, and the motherly nurse pushed her forward and closed the door.

"You can come again soon, dear," she said, with unexpected tenderness in her eyes. For a moment Elizabeth stared at her with a blank face. "You can come again soon," repeated the nurse. Then with a swift transition Elizabeth was weeping in the nurse's arms. So it was that Denton's heart was won also.

And three weeks after our young people were absolutely penniless, and only one way lay open. They must go to the Labour Company. So soon as the rent was a week overdue their few remaining possessions were seized, and with scant courtesy they were shown the way out of the hotel. Elizabeth walked along the passage towards the staircase that ascended to the motionless middle way, too dulled by misery to think. Denton stopped behind to finish a stinging and unsatisfactory argument with the hotel porter, and then came hurrying after her, flushed and hot. He slackened his pace as he overtook her, and together they ascended to the middle way in silence. There they found two seats vacant and sat down.

"We need not go there—*yet?*" said Elizabeth.

"No—not till we are hungry," said Denton.

They said no more.

Elizabeth's eyes sought a resting-place and found none. To the right roared the eastward ways, to the left the ways in the opposite direction, swarming with people. Backwards and forwards along a cable overhead rushed a string of gesticulating men, dressed like clowns, each marked on back and chest with one gigantic letter, so that altogether they spelt out:

"PURKINJE'S DIGESTIVE PILLS."

An anæmic little woman in horrible coarse blue canvas pointed a little girl to one of this string of hurrying advertisements.

"Look!" said the anæmic woman: "there's yer father."

"Which?" said the little girl.

"'Im wiv his nose coloured red," said the anæmic woman.

The little girl began to cry, and Elizabeth could have cried too.

"Ain't 'e kickin' 'is legs!—*just!*" said the anæmic woman in blue, trying to make things bright again. "Looky—*now!*"

On the *façade* to the right a huge intensely bright disc of weird colour span incessantly, and letters of fire that came and went spelt out—

"DOES THIS MAKE YOU GIDDY?"

Then a pause, followed by

"TAKE A PURKINJE'S DIGESTIVE PILL."

A vast and desolating braying began. "If you love Swagger Literature, put your telephone on to Bruggles, the Greatest Author of all Time. The Greatest Thinker of all Time. Teaches you Morals up to your Scalp! The very image of Socrates, except the back of his head, which is like Shakespeare. He has six toes, dresses in red, and never cleans his teeth. Hear HIM!"

Denton's voice became audible in a gap in the uproar. "I never ought to have married you," he was saying. "I have wasted your money, ruined you, brought you to misery. I am a scoundrel . . . Oh, this accursed world!"

She tried to speak, and for some moments could not. She grasped his hand. "No," she said at last.

A half-formed desire suddenly became determination. She stood up. "Will you come?"

He rose also. "We need not go there yet."

"Not that. But I want you to come to the flying stages—where we met. You know? The little seat."

He hesitated. "Can you?" he said, doubtfully.

"Must," she answered.

He hesitated still for a moment, then moved to obey her will.

And so it was they spent their last half-day of freedom out under the open air in the little seat under the flying stages where they had been wont to meet five short years ago. There she told him, what she could not tell him in the tumultuous public ways, that she did not repent even now of their marriage—that whatever discomfort and misery life still had for them, she was content with the things that had been. The weather was kind to them, the seat was sunlit and warm, and overhead the shining aeroplanes went and came.

At last towards sunseting their time was at an end, and they made their vows to one another and clasped hands, and then rose up and went back into the ways of the city, a shabby-looking, heavy-hearted pair, tired and hungry. Soon they came to one of the pale blue signs that marked a Labour Company Bureau. For a space they stood in the middle way regarding this and at last descended, and entered the waiting-room.

The Labour Company had originally been a charitable organisation; its aim was to supply food, shelter, and work to all comers. This it was bound to do by the conditions of its incorporation, and it was also bound to supply food and shelter and medical attendance to all incapable of work who chose to demand its aid. In exchange these incapables paid labour notes, which they had to redeem upon recovery. They signed these labour notes with thumb-marks, which were photographed and indexed in such a way that this world-wide Labour Company could identify any one of its two or three hundred million clients at the cost of an hour's inquiry. The day's labour was defined as two spells in a treadmill used in generating electrical force, or its equivalent, and its due performance could be enforced

by law. In practice the Labour Company found it advisable to add to its statutory obligations of food and shelter a few pence a day as an inducement to effort; and its enterprise had not only abolished pauperisation altogether, but supplied practically all but the very highest and most responsible labour throughout the world. Nearly a third of the population of the world were its serfs and debtors from the cradle to the grave.

In this practical, unsentimental way the problem of the unemployed had been most satisfactorily met and overcome. No one starved in the public ways, and no rags, no costume less sanitary and sufficient than the Labour Company's hygienic but inelegant blue canvas, pained the eye throughout the whole world. It was the constant theme of the phonographic newspapers how much the world had progressed since nineteenth-century days, when the bodies of those killed by the vehicular traffic or dead of starvation, were, they alleged, a common feature in all the busier streets.

Denton and Elizabeth sat apart in the waiting-room until their turn came. Most of the others collected there seemed limp and taciturn, but three or four young people gaudily dressed made up for the quietude of their companions. They were life clients of the Company, born in the Company's *creche* and destined to die in its hospital, and they had been out for a spree with some shillings or so of extra pay. They talked vociferously in a later development of the Cockney dialect, manifestly very proud of themselves.

Elizabeth's eyes went from these to the less assertive figures. One seemed exceptionally pitiful to her. It was a woman of perhaps forty-five, with gold-stained hair and a painted face, down which abundant tears had trickled; she had a pinched nose, hungry eyes, lean hands and shoulders, and her dusty worn-out finery told the story of her life. Another was a grey-bearded old man in the costume of a bishop of one of the high episcopal sects—for religion was now also a busi-

ness, and had its ups and downs. And beside him a sickly, dissipated-looking boy of perhaps two-and-twenty glared at Fate.

Presently Elizabeth and then Denton interviewed the manageress—for the Company preferred women in this capacity—and found she possessed an energetic face, a contemptuous manner, and a particularly unpleasant voice. They were given various cheques, including one to certify that they need not have their heads cropped; and when they had given their thumb-marks, learnt the number corresponding thereunto, and exchanged their shabby middle-class clothes for duly numbered blue canvas suits, they repaired to the huge plain dining-room for their first meal under these new conditions. Afterwards they were to return to her for instructions about their work.

When they had made the exchange of their clothing Elizabeth did not seem able to look at Denton at first; but he looked at her, and saw with astonishment that even in blue canvas she was still beautiful. And then their soup and bread came sliding on its little rail down the long table towards them and stopped with a jerk, and he forgot the matter. For they had had no proper meal for three days.

After they had dined they rested for a time. Neither talked—there was nothing to say; and presently they got up and went back to the manageress to learn what they had to do.

The manageress referred to a tablet. "Y'r rooms won't be here; it'll be in the Highbury Ward, ninety-seventh way, number two thousand and seventeen. Better make a note of it on y'r card. *You*, nought nought nought, type seven, sixty-four, b.c.d., *gamma* forty-one, female; you 'ave to go to the Metal-beating Company and try that for a day—fourpence bonus if ye're satisfactory; and *you*, nought seven one, type four, seven hundred and nine, g.f.b., *pi* five and ninety male; you 'ave to go to the Photographic Company on

Eighty-first way, and learn something or other—I don't know—thrippence. 'Ere's y'r cards. That's all. Next! *What?* Didn't catch it all? Lor! So suppose I must go over it all again. Why don't you listen? Keerless, unprovident people! One'd think these things didn't matter."

Their ways to their work lay together for a time. And now they found they could talk. Curiously enough, the worst of their depression seemed over now that they had actually donned the blue. Denton could talk with interest even of the work that lay before them. "Whatever it is," he said, "it can't be so hateful as that hat shop. And after we have paid for Dings, we shall still have a whole penny a day between us even now. Afterwards—we may improve,—get more money."

Elizabeth was less inclined to speech. "I wonder why work should seem so hateful," she said.

"It's odd," said Denton. "I suppose it wouldn't be if it were not the thought of being ordered about. . . . I hope we shall have decent managers."

Elizabeth did not answer. She was not thinking of that. She was tracing out some thoughts of her own.

"Of course," she said presently, "we have been using up work all our lives. It's only fair—"

She stopped. It was too intricate.

"We paid for it," said Denton, for at that time he had not troubled himself about these complicated things.

"We did nothing—and yet we paid for it. That's what I cannot understand."

"Perhaps we are paying," said Elizabeth presently—for her theology was old-fashioned and simple.

Presently it was time for them to part, and each went to the appointed work. Denton's was to mind a complicated hydraulic press that seemed almost an intelligent thing. This press worked by the sea-water

that was destined finally to flush the city drains—for the world had long since abandoned the folly of pouring drinkable water into its sewers. This water was brought close to the eastward edge of the city by a huge canal, and then raised by an enormous battery of pumps into reservoirs at a level of four hundred feet above the sea, from which it spread by a billion arterial branches over the city. Thence it poured down, cleansing, sluicing, working machinery of all sorts, through an infinite variety of capillary channels into the great drains, the *cloacae maximae*, and so carried the sewage out to the agricultural areas that surrounded London on every side.

The press was employed in one of the processes of the photographic manufacture, but the nature of the process it did not concern Denton to understand. The most salient fact to his mind was that it had to be conducted in ruby light, and as a consequence the room in which he worked was lit by one coloured globe that poured a lurid and painful illumination about the room. In the darkest corner stood the press whose servant Denton had now become: it was a huge, dim, glittering thing with a projecting hood that had a remote resemblance to a bowed head, and, squatting like some metal Buddha in this weird light that ministered to its needs, it seemed to Denton in certain moods almost as if this must needs be the obscure idol to which humanity in some strange aberration had offered up his life. His duties had a varied monotony. Such items as the following will convey an idea of the service of the press. The thing worked with a busy clicking so long as things went well; but if the paste that came pouring through a feeder from another room and which it was perpetually compressing into thin plates, changed in quality the rhythm of its click altered and Denton hastened to make certain adjustments. The slightest delay involved a waste of paste and the docking of one or more of his daily pence. If the supply of paste

waned—there were hand processes of a peculiar sort involved in its preparation, and sometimes the workers had convulsions which deranged their output—Denton had to throw the press out of gear. In the painful vigilance a multitude of such trivial attentions entailed, painful because of the incessant effort its absence of natural interest required, Denton had now to pass one-third of his days. Save for an occasional visit from the manager, a kindly but singularly foul-mouthed man, Denton passed his working hours in solitude.

Elizabeth's work was of a more social sort. There was a fashion for covering the private apartments of the very wealthy with metal plates beautifully embossed with repeated patterns. The taste of the time demanded, however, that the repetition of the patterns should not be exact—not mechanical, but “natural”—and it was found that the most pleasing arrangement of pattern irregularity was obtained by employing women of refinement and natural taste to punch out the patterns with small dities. So many square feet of plates was exacted from Elizabeth as a minimum, and for whatever square feet she did in excess she received a small payment. The room, like most rooms of women workers, was under a manageress: men had been found by the Labour Company not only less exacting but extremely liable to excuse favoured ladies from a proper share of their duties. The manageress was a not unkindly, taciturn person, with the hardened remains of beauty of the brunette type; and the other women workers, who of course hated her, associated her name scandalously with one of the metal-work directors in order to explain her position.

Only two or three of Elizabeth's fellow-workers were born labour serfs; plain, morose girls, but most of them corresponded to what the nineteenth century would have called a “reduced” gentlewoman. But the ideal of what constituted a gentlewoman had altered: the faint, faded, negative virtue, the modulated voice and

restrained gesture of the old-fashioned gentlewoman had vanished from the earth. Most of her companions showed in discoloured hair, ruined complexions, and the texture of their reminiscent conversations, the vanished glories of a conquering youth. All of these artistic workers were much older than Elizabeth, and two openly expressed their surprise that any one so young and pleasant should come to share their toil. But Elizabeth did not trouble them with her old-world moral conceptions.

They were permitted, and even encouraged to converse with each other, for the directors very properly judged that anything that conduced to variations of mood made for pleasing fluctuations in their patterning; and Elizabeth was almost forced to hear the stories of these lives with which her own interwove: garbled and distorted they were by vanity indeed and yet comprehensible enough. And soon she began to appreciate the small spites and cliques, the little misunderstandings and alliances that enmeshed about her. One woman was excessively garrulous and descriptive about a wonderful son of hers; another had cultivated a foolish coarseness of speech, that she seemed to regard as the wittiest expression of originality conceivable; a third mused for ever on dress, and whispered to Elizabeth how she saved her pence day after day, and would presently have a glorious day of freedom, wearing . . . and then followed hours of description; two others sat always together, and called one another pet names, until one day some little thing happened, and they sat apart, blind and deaf as it seemed to one another's being. And always from them all came an incessant tap, tap, tap, tap, and the manageress listened always to the rhythm to mark if one fell away. Tap, tap, tap, tap: so their days passed, so their lives must pass. Elizabeth sat among them, kindly and quiet, gray-hearted, marvelling at Fate: tap, tap, tap; tap, tap, tap; tap, tap, tap.

So there came to Denton and Elizabeth a long

succession of laborious days, that hardened their hands, wove strange threads of some new and sterner substance into the soft prettiness of their lives, and drew grave lines and shadows on their faces. The bright, convenient ways of the former life had receded to an inaccessible distance; slowly they learnt the lesson of the under-world—sombre and laborious, vast and pregnant. There were many little things happened: things that would be tedious and miserable to tell, things that were bitter and grievous to bear—indignities, tyrannies, such as must ever season the bread of the poor in cities; and one thing that was not little, but seemed like the utter blackening of life to them, which was that the child they had given life to sickened and died. But that story, that ancient, perpetually recurring story, has been told so often, has been told so beautifully, that there is no need to tell it over again here. There was the same sharp fear, the same long anxiety, the deferred inevitable blow, and the black silence. It has always been the same; it will always be the same. It is one of the things that must be.

And it was Elizabeth who was the first to speak, after an aching, dull interspace of days: not, indeed, of the foolish little name that was a name no longer, but of the darkness that brooded over her soul. They had come through the shrieking, tumultuous ways of the city together; the clamour of trade, of yelling competitive religions, of political appeal, had beat upon deaf ears; the glare of focused lights, of dancing letters, and fiery advertisements, had fallen upon the set, miserable faces unheeded. They took their dinner in the dining-hall at a place apart. "I want," said Elizabeth clumsily, "to go out to the flying stages—to that seat. Here, one can say nothing. . . ."

Denton looked at her. "It will be night," he said.

"I have asked,—it is a fine night." She stopped.

He perceived she could find no words to explain

herself. Suddenly he understood that she wished to see the stars once more, the stars they had watched together from the open downland in that wild honeymoon of theirs five years ago. Something caught at his throat. He looked away from her.

"There will be plenty of time to go," he said, in a matter-of-fact tone.

And at last they came out to their little seat on the flying stage, and sat there for a long time in silence. The little seat was in shadow, but the zenith was pale blue with the effulgence of the stage overhead, and all the city spread below them, squares and circles and patches of brilliance caught in a mesh-work of light. The little stars seemed very faint and small: near as they had been to the old-world watcher, they had become now infinitely remote. Yet one could see them in the darkened patches amidst the glare, and especially in the northward sky, the ancient constellations gliding steadfast and patient about the pole.

Long our two people sat in silence, and at last Elizabeth sighed.

"If I understood," she said, "if I could understand. When one is down there the city seems everything—the noise, the hurry, the voices—you must live, you must scramble. Here—it is nothing; a thing that passes. One can think in peace."

"Yes," said Denton. "How flimsy it all is! From here more than half of it is swallowed by the night. . . . It will pass."

"We shall pass first," said Elizabeth.

"I know," said Denton. "If life were not a moment, the whole of history would seem like the happening of a day. . . . Yes—we shall pass. And the city will pass, and all the things that are to come. Man and the Overman and wonders unspeakable. And yet . . ."

He paused, and then began afresh. "I know what you feel. At least I fancy. . . . Down there one thinks of one's work, one's little vexations and pleasures, one's

eating and drinking and ease and pain. One lives, and one must die. Down there and everyday—our sorrow seemed the end of life. . . .

“Up here it is different. For instance, down there it would seem impossible almost to go on living if one were horribly disfigured, horribly crippled, disgraced. Up here—under these stars—none of those things would matter. They don't matter. . . . They are a part of something. One seems just to touch that something—under the stars. . . .”

He stopped. The vague, impalpable things in his mind, cloudy emotions half shaped towards ideas, vanished before the rough grasp of words. “It is hard to express,” he said lamely.

They sat through a long stillness.

“It is well to come here,” he said at last. “We stop—our minds are very finite. After all we are just poor animals rising out of the brute, each with a mind, the poor beginning of a mind. We are so stupid. So much hurts. And yet. . . .”

“I know, I know—and some day we shall see.”

“All this frightful stress, all this discord will resolve to harmony, and we shall know it. Nothing is but it makes for that. Nothing. All the failures—every little thing makes for that harmony. Everything is necessary to it, we shall find. We shall find. Nothing, not even the most dreadful thing, could be left out. Not even the most trivial. Every tap of your hammer on the brass, every moment of work, my idleness even. . . . Dear one! every movement of our poor little one. . . . All these things go on for ever. And the faint impalpable things. We, sitting here together.—Everything. . . .”

“The passion that joined us, and what has come since. It is not passion now. More than anything else it is sorrow. *Dear. . . .*”

He could say no more, could follow his thoughts no further.

Elizabeth made no answer—she was very still; but presently her hand sought his and found it.

IV.—Underneath

Under the stars one may reach upward and touch resignation, whatever the evil thing may be, but in the heat and stress of the day's work we lapse again, come disgust and anger and intolerable moods. How little is all our magnanimity—an accident! a phase! The very Saints of old had first to flee the world. And Denton and his Elizabeth could not flee their world, no longer were there open roads to unclaimed lands where men might live freely—however hardly—and keep their souls in peace. The city had swallowed up mankind.

For a time these two Labour Serfs were kept at their original occupations, she at her brass stamping and Denton at his press; and then came a move for him that brought with it fresh and still bitterer experiences of life in the underways of the great city. He was transferred to the care of a rather more elaborate press in the central factory of the London Tile Trust.

In this new situation he had to work in a long vaulted room with a number of other men, for the most part born Labour Serfs. He came to this intercourse reluctantly. His upbringing had been refined, and, until his ill fortune had brought him to that costume, he had never spoken in his life, except by way of command or some immediate necessity, to the white-faced wearers of the blue canvas. Now at last came contact; he had to work beside them, share their tools, eat with them. To both Elizabeth and himself this seemed a further degradation.

His taste would have seemed extreme to a man of the nineteenth century. But slowly and inevitably in the intervening years a gulf had opened between the

wearers of the blue canvas and the classes above, a difference not simply of circumstances and habits of life, but of habits of thought—even of language. The underways had developed a dialect of their own: above, too, had arisen a dialect, a code of thought, a language of "culture," which aimed by a sedulous search after fresh distinction to widen perpetually the space between itself and "vulgarity." The bond of a common faith, moreover, no longer held the race together. The last years of the nineteenth century were distinguished by the rapid development among the prosperous idle of esoteric perversions of the popular religion: glosses and interpretations that reduced the broad teachings of the carpenter of Nazareth to the exquisite narrowness of their lives. And, spite of their inclination towards the ancient fashion of living, neither Elizabeth nor Denton had been sufficiently original to escape the suggestion of their surroundings. In matters of common behaviour they had followed the ways of their class, and so when they fell at last to be Labour Serfs it seemed to them almost as though they were falling among offensive inferior animals; they felt as a nineteenth-century duke and duchess might have felt who were forced to take rooms in the Jago.

Their natural impulse was to maintain a "distance." But Denton's first idea of a dignified isolation from his new surroundings was soon rudely dispelled. He had imagined that his fall to the position of a Labour Serf was the end of his lesson, that when their little daughter had died he had plumbed the deeps of life; but indeed these things were only the beginning. Life demands something more from us than acquiescence. And now in a roomful of machine minders he was to learn a wider lesson, to make the acquaintance of another factor in life, a factor as elemental as the loss of things dear to us, more elemental even than toil.

His quiet discouragement of conversation was an immediate cause of offence—was interpreted, rightly

enough I fear, as disdain. His ignorance of the vulgar dialect, a thing upon which he had hitherto prided himself, suddenly took upon itself a new aspect. He failed to perceive at once that his reception of the coarse and stupid but genially intended remarks that greeted his appearance must have stung the makers of these advances like blows in their faces. "Don't understand," he said rather coldly, and at hazard, "No, thank you."

The man who had addressed him stared, scowled, and turned away.

A second, who also failed at Denton's unaccustomed ear, took the trouble to repeat his remark, and Denton discovered he was being offered the use of an oil can. He expressed polite thanks, and this second man embarked upon a penetrating conversation. Denton, he remarked, had been a swell, and he wanted to know how he had come to wear the blue. He clearly expected an interesting record of vice and extravagance. Had Denton ever been at a Pleasure City? Denton was speedily to discover how the existence of these wonderful places of delight permeated and defiled the thought and honour of these unwilling, hopeless workers of the underworld.

His aristocratic temperament resented these questions. He answered "No" curtly. The man persisted with a still more personal question, and this time it was Denton who turned away.

"Gorblimey!" said his interlocutor, much astonished.

It presently forced itself upon Denton's mind that this remarkable conversation was being repeated in indignant tones to more sympathetic hearers, and that it gave rise to astonishment and ironical laughter. They looked at Denton with manifestly enhanced interest. A curious perception of isolation dawned upon him. He tried to think of his press and its unfamiliar peculiarities. . . .

The machines kept everybody pretty busy during the

first spell, and then came a recess. It was only an interval for refreshment, too brief for any one to go out to a Labour Company dining-room. Denton followed his fellow-workers into a short gallery, in which were a number of bins and refuse from the presses.

Each man produced a packet of food. Denton had no packet. The manager, a careless young man who held his position by influence, had omitted to warn Denton that it was necessary to apply for this provision. He stood apart, feeling hungry. The others drew together in a group and talked in undertones, glancing at him ever and again. He became uneasy. His appearance of disregard cost him an increasing effort. He tried to think of the levers of his new press.

Presently one, a man shorter but much broader and stouter than Denton, came forward to him. Denton turned to him as unconcerned as possible. "Here!" said the delegate—as Denton judged him to be—extending a cube of bread in a not too clean hand. He had a swart, broad-nosed face, and his mouth hung down towards one corner.

Denton felt doubtful for the instant whether this was meant for civility or insult. His impulse was to decline. "No, thanks," he said; and, at the man's change of expression, "I'm not hungry."

There came a laugh from the group behind. "Told you so," said the man who had offered Denton the loan of an oil can. "He's top side, he is. You ain't good enough for 'im."

The swart face grew a shade darker.

"Here," said its owner, still extending the bread, and speaking in a lower tone; "you got to eat this. See?"

Denton looked into the threatening face before him, and odd little currents of energy seemed to be running through his limbs and body.

"I don't want it," he said, trying a pleasant smile that twitched and failed.

The thickset man advanced his face, and the bread became a physical threat in his hand. Denton's mind rushed together to the one problem of his antagonist's eyes.

"Eat it," said the swart man.

There came a pause, and then they both moved quickly. The cube of bread described a complicated path, a curve that would have ended in Denton's face; and then his fist hit the wrist of the hand that gripped it, and it flew upward, and out of the conflict—its part played.

He stepped back quickly, fists clenched and arms tense. The hot, dark countenance receded, became an alert hostility, watching its chance. Denton for one instant felt confident, and strangely buoyant and serene. His heart beat quickly. He felt his body alive, and glowing to the tips.

"Scrap, boys!" shouted some one, and then the dark figure had leapt forward, ducked back and sideways, and come in again. Denton struck out, and was hit. One of his eyes seemed to him to be demolished, and he felt a soft lip under his fist just before he was hit again—this time under the chin. A huge fan of fiery needles shot open. He had a momentary persuasion that his head was knocked to pieces, and then something hit his head and back from behind, and the fight became an uninteresting, an impersonal thing.

He was aware that time—seconds or minutes—had passed, abstract, uneventful time. He was lying with his head in a heap of ashes, and something wet and warm ran swiftly into his neck. The first shock broke up into discrete sensations. All his head throbbed; his eye and his chin throbbed exceedingly, and the taste of blood was in his mouth.

"He's all right," said a voice. "He's opening his eyes."

"Serve him—well right," said a second.

His mates were standing about him. He made an

effort and sat up. He put his hand to the back of his head, and his hair was wet and full of cinders. A laugh greeted the gesture. His eye was partially closed. He perceived what had happened. His momentary anticipation of a final victory had vanished.

"Looks surprised," said some one.

"'Ave any more?" said a wit; and then, imitating Denton's refined accent: "No, thank you."

Denton perceived the swart man with a blood-stained handkerchief before his face, and somewhat in the background.

"Where's that bit of bread he's got to eat?" said a little ferret-faced creature; and sought with his foot in the ashes of the adjacent bin.

Denton had a moment of internal debate. He knew the code of honour requires a man to pursue a fight he has begun to the bitter end; but this was his first taste of the bitterness. He was resolved to rise again, but he felt no passionate impulse. It occurred to him—and the thought was no very violent spur—that he was perhaps after all a coward. For a moment his will was heavy, a lump of lead.

"'Ere it is," said the little ferret-faced man, and stooped to pick up a cindery cube. He looked at Denton, then at the others.

Slowly, unwillingly, Denton stood up.

A dirty-faced albino extended a hand to the ferret-faced man.

"Gimme that toke," he said. He advanced threateningly, bread in hand, to Denton. "So you ain't 'ad your bellyful yet," he said. "Eh?"

Now it was coming. "No, I haven't," said Denton, with a catching of the breath, and resolved to try this brute behind the ear before he himself got stunned again. He knew he would be stunned again. He was astonished how ill he had judged himself beforehand. A few ridiculous lunges, and down he would go again. He watched the albino's eyes. The albino was grin-

ning confidently, like a man who plans an agreeable trick. A sudden perception of impending indignities stung Denton.

"You leave 'im alone, Jim," said the swart man suddenly over the blood-stained rag. "He ain't done nothing to you."

The albino's grin vanished. He stopped. He looked from one to the other. It seemed to Denton that the swart man demanded the privilege of his destruction. The albino would have been better.

"You leave 'im alone," said the swart man. "See? 'E's 'ad 'is licks."

A clattering bell lifted up its voice and solved the situation. The albino hesitated. "Lucky for you," he said, adding a foul metaphor, and turned with the others towards the press-room again. "Wait for the end of the spell, mate," said the albino over his shoulder—an afterthought. The swart man waited for the albino to precede him. Denton realised that he had a reprieve.

The men passed towards an open door. Denton became aware of his duties, and hurried to join the tail of the queue. At the doorway of the vaulted gallery of presses a yellow-uniformed labour policeman stood ticking a card. He had ignored the swart man's hæmorrhage.

"Hurry up there!" he said to Denton.

"Hello!" he said, at the sight of his facial disarray.

"Who's been hitting *you*?"

"That's my affair," said Denton.

"Not if it spiles your work, it ain't," said the man in yellow. "You mind that."

Denton made no answer. He was a rough—a labourer. He wore the blue canvas. The laws of assault and battery, he knew, were not for the likes of him. He went to his press.

He could feel the skin of his brow and chin and head lifting themselves to noble bruises, felt the throb

and pain of each aspiring contusion. His nervous system slid down to lethargy; at each movement in his press adjustment he felt he lifted a weight. And as for his honour—that too throbbed and puffed. How did he stand? What precisely had happened in the last ten minutes? What would happen next? He knew that there was enormous matter for thought, and he could not think save in disordered snatches.

His mood was a sort of stagnant astonishment. All his conceptions were overthrown. He had regarded his security from physical violence as inherent, as one of the conditions of life. So, indeed, it had been while he wore his middle-class costume, had his middle-class property to serve for his defence. But who would interfere among Labour roughs fighting together? And indeed in those days no man would. In the Underworld there was no law between man and man; the law and machinery of the state had become for them something that held men down, fended them off from much desirable property and pleasure, and that was all. Violence, that ocean in which the brutes live for ever, and from which a thousand dykes and contrivances have won our hazardous civilised life, had flowed in again upon the sinking underways and submerged them. The fist ruled. Denton had come right down at last to the elemental—fist and trick and the stubborn heart and fellowship—even as it was in the beginning.

The rhythm of his machine changed, and his thoughts were interrupted.

Presently he could think again. Strange how quickly things had happened! He bore these men who had thrashed him no very vivid ill-will. He was bruised and enlightened. He saw with absolute fairness now the reasonableness of his unpopularity. He had behaved like a fool. Disdain, seclusion, are the privilege of the strong. The fallen aristocrat still clinging to his pointless distinction is surely the most pitiful

creature of pretence in all this clamant universe. Good heavens! what was there for him to despise in these men?

What a pity he had not appreciated all this better five hours ago!

What would happen at the end of the spell? He could not tell. He could not imagine. He could not imagine the thoughts of these men. He was sensible only of their hostility and utter want of sympathy. Vague possibilities of shame and violence chased one another across his mind. Could he devise some weapon? He recalled his assault upon the hypnotist, but there were no detachable lamps here. He could see nothing that he could catch up in his defence.

For a space he thought of a headlong bolt for the security of the public ways directly the spell was over. Apart from the trivial consideration of his self-respect, he perceived that this would be only a foolish postponement and aggravation of his trouble. He perceived the ferret-faced man and the albino talking together with their eyes towards him. Presently they were talking to the swart man, who stood with his broad back studiously towards Denton.

At last came the end of the second spell. The lender of oil cans stopped his press sharply and turned round, wiping his mouth with the back of his hand. His eyes had the quiet expectation of one who seats himself in a theatre.

Now was the crisis, and all the little nerves of Denton's being seemed leaping and dancing. He had decided to show fight if any fresh indignity was offered him. He stopped his press and turned. With an enormous affectation of ease he walked down the vault and entered the passage of the ash pits, only to discover he had left his jacket—which he had taken off because of the heat of the vault—beside his press. He walked back. He met the albino eye to eye.

He heard the ferret-faced man in expostulation.

"'E reely ought, eat it," said the ferret-faced man.
 "'E did reely."

"No—you leave 'im alone," said the swart man.

Apparently nothing further was to happen to him that day. He passed out to the passage and staircase that led up to the moving platforms of the city.

He emerged on the livid brilliance and streaming movement of the public street. He became acutely aware of his disfigured face, and felt his swelling bruises with a limp, investigatory hand. He went up to the swiftest platform, and seated himself on a Labour Company bench.

He lapsed into a pensive torpor. The immediate dangers and stresses of his position he saw with a sort of static clearness. What would they do to-morrow? He could not tell. What would Elizabeth think of his brutalisation? He could not tell. He was exhausted. He was aroused presently by a hand upon his arm.

He looked up, and saw the swart man seated beside him. He started. Surely he was safe from violence in the public way!

The swart man's face retained no traces of his share in the fight; his expression was free from hostility—seemed almost deferential. "'Scuse me," he said, with a total absence of truculence. Denton realised that no assault was intended. He stared, awaiting the next development.

It was evident the next sentence was premeditated. "Whad—I—was—going—to say—was this," said the swart man, and sought through a silence for further words.

"Whad—I—was—going—to say—was this," he repeated.

Finally he abandoned that gambit. "*You're* aw right," he cried, laying a grimy hand on Denton's grimy sleeve. "*You're* aw right. You're a ge'man. Sorry—very sorry. Wanted to tell you that."

Denton realised that there must exist motives beyond

a mere impulse to abominable proceedings in the man. He meditated, and swallowed an unworthy pride.

"I did not mean to be offensive to you," he said, "in refusing that bit of bread."

"Meant it friendly," said the swart man, recalling the scene; "but—in front of that blarsted Whitey and his snigger—well—I 'ad to scrap."

"Yes," said Denton with sudden fervour: "I was a fool."

"Ah," said the swart man, with great satisfaction. "*That's* aw right. Shake!"

And Denton shook.

The moving platform was rushing by the establishment of a face moulder, and its lower front was a huge display of mirror, designed to stimulate the thirst for more symmetrical features. Denton caught the reflection of himself and his new friend, enormously twisted and broadened. His own face was puffed, one-sided, and blood-stained; a grin of idiotic and insincere amiability distorted its latitude. A wisp of hair occluded one eye. The trick of the mirror presented the swart man as a gross expansion of lip and nostril. They were linked by shaking hands. Then abruptly this vision passed—to return to memory in the anæmic meditations of a waking dawn.

As he shook, the swart man made some muddled remark, to the effect that he had always known he could get on with a gentleman if one came his way. He prolonged the shaking until Denton, under the influence of the mirror, withdrew his hand. The swart man became pensive, spat impressively on the platform, and resumed his theme.

"Whad I was going to say was this," he said; was gravelled, and shook his head at his foot.

Denton became curious. "Go on," he said, attentive.

The swart man took the plunge. He grasped Denton's arm, became intimate in his attitude. "'Scuse

me," he said. "Fact is, you done know 'ow to scrap. Done know 'ow to. Why—you done know 'ow to *begin*. You'll get killed if you don't mind. 'Ouldin' your 'ands— *There!*"

He reinforced his statement by objurgation, watching the effect of each oath with a wary eye.

"F'r instance. You're tall. Long arms. You got a longer reach than any one in the brasted vault. Gobblimey, but I thought I'd got a Tough on. 'Stead of which . . . 'Scuse me. I wouldn't have 'it you if I'd known. It's like fighting sacks. 'Tisn' right. Y'r arms seemed 'ung on 'ooks. Reg'lar—'ung on 'ooks. *There!*"

Denton stared, and then surprised and hurt his battered chin by a sudden laugh. Bitter tears came into his eyes.

"Go on," he said.

The swart man reverted to his formula. He was good enough to say he liked the look of Denton, thought he had stood up "amazing plucky. On'y pluck ain't no good—ain't no brasted good—if you don't 'old your 'ands.

"Whad I was going to say was this," he said. "Lemme show you 'ow to scrap. Jest lemme. You're ig'nant, you ain't no class; but you might be a very decent scrapper—very decent. Shown. That's what I meant to say."

Denton hesitated. "But—" he said, "I can't give you anything—"

"That's the ge'man all over," said the swart man.

"Who arst you to?"

"But your time?"

"If you don't get learnt scrapping you'll get killed,—don't you make no bones of that."

Denton thought. "I don't know," he said.

He looked at the face beside him, and all its native coarseness shouted at him. He felt a quick revulsion from his transient friendliness. It seemed to him in-

credible that it should be necessary for him to be indebted to such a creature.

"The chaps are always scrapping," said the swart man. "Always. And, of course—if one gets waxy and 'its you vital . . ."

"By God!" cried Denton; "I wish one would."

"Of course, if you feel like that—"

"You don't understand."

"P'raps I don't," said the swart man; and lapsed into a fuming silence.

When he spoke again his voice was less friendly, and he prodded Denton by way of address. "Look see!" he said: "are you going to let me show you 'ow to scrap?"

"It's tremendously kind of you," said Denton; "but—"

There was a pause. The swart man rose and bent over Denton.

"Too much ge'man," he said—"eh? I got a red face. . . . By gosh! you are—you *are* a brasted fool!"

He turned away, and instantly Denton realised the truth of this remark.

The swart man descended with dignity to a cross way, and Denton, after a momentary impulse to pursuit, remained on the platform. For a time the things that had happened filled his mind. In one day his graceful system of resignation had been shattered beyond hope. Brute force, the final, the fundamental, had thrust its face through all his explanations and glosses and consolations and grinned enigmatically. Though he was hungry and tired, he did not go on directly to the Labour Hotel, where he would meet Elizabeth. He found he was beginning to think, he wanted very greatly to think; and so, wrapped in a monstrous cloud of meditation, he went the circuit of the city on his moving platform twice. You figure him, tearing through the glaring, thunder-voiced city at a pace of fifty miles an hour, the city upon the planet that spins along its

chartless path through space many thousands of miles an hour, finking most terribly, and trying to understand why the heart and will in him should suffer and keep alive.

When at last he came to Elizabeth, she was white and anxious. He might have noted she was in trouble, had it not been for his own preoccupation. He feared most that she would desire to know every detail of his indignities, that she would be sympathetic or indignant. He saw her eyebrows rise at the sight of him.

"I've had rough handling," he said, and gasped. "It's too fresh—too hot. I don't want to talk about it." He sat down with an unavoidable air of sullenness.

She stared at him in astonishment, and as she read something of the significant hieroglyphic of his battered face, her lips whitened. Her hand—it was thinner now than in the days of their prosperity, and her first finger was a little altered by the metal punching she did—clenched convulsively. "This horrible world!" she said, and said no more.

In these latter days they had become a very silent couple; they said scarcely a word to each other that night, but each followed a private train of thought. In the small hours, as Elizabeth lay awake, Denton started up beside her suddenly—he had been lying as still as a dead man.

"I cannot stand it!" cried Denton. "I *will* not stand it!"

She saw him dimly, sitting up; saw his arm lunge as if in a furious blow at the enshrouding night. Then for a space he was still.

"It is too much—it is more than one can bear!"

She could say nothing. To her, also, it seemed that this was as far as one could go. She waited through a long stillness. She could see that Denton sat with his arms about his knees, his chin almost touching them.

Then he laughed.

"No," he said at last, "I'm going to stand it. That's the peculiar thing. There isn't a grain of suicide in us—not a grain. I suppose all the people with a turn that way have gone. We're going through with it—to the end."

Elizabeth thought grayly, and realised that this also was true.

"We're going through with it. To think of all who have gone through with it: all the generations—endless—endless. Little beasts that snapped and snarled, snapping and snarling, snapping and snarling, generation after generation."

His monotone, ended abruptly, resumed after a vast interval.

"There were ninety thousand years of stone age. A Denton somewhere in all those years. Apostolic succession. The grace of going through. Let me see! Ninety—nine hundred—three nines, twenty-seven—*three thousand* generations of men!—men more or less. And each fought, and was bruised, and shamed, and somehow held his own—going through with it—passing it on. . . . And thousands more to come perhaps—thousands!

"Passing it on. I wonder if they will thank us."

His voice assumed an argumentative note. "If one could find something definite. . . . If one could say, 'This is why—this is why it goes on. . . .'"

He became still, and Elizabeth's eyes slowly separated him from the darkness until at last she could see how he sat with his head resting on his hand. A sense of the enormous remoteness of their minds came to her; that dim suggestion of another being seemed to her a figure of their mutual understanding. What could he be thinking now? What might he not say next? Another age seemed to elapse before he sighed and whispered: "No. I don't understand it. No!" Then a long interval, and he repeated this. But the second time it had the tone almost of a solution.

She became aware that he was preparing to lie down. She marked his movements, perceived with astonishment how he adjusted his pillow with a careful regard to comfort. He lay down with a sigh of contentment almost. His passion had passed. He lay still, and presently his breathing became regular and deep.

But Elizabeth remained with eyes wide open in the darkness, until the clamour of a bell and the sudden brilliance of the electric light warned them that the Labour Company had need of them for yet another day.

That day came a scuffle with the albino Whitey and the little ferret-faced man. Blunt, the swart artist in scrapping, having first let Denton grasp the bearing of his lesson, intervened, not without a certain quality of patronage. "Drop 'is 'air, Whitey, and let the man be," said his gross voice through a shower of indignities. "Can't you see 'e don't know 'ow to scrap?" And Denton, lying shamefully in the dust, realised that he must accept that course of instruction after all.

He made his apology straight and clean. He scrambled up and walked to Blunt. "I was a fool, and you are right," he said. "If it isn't too late . . ."

That night, after the second spell, Denton went with Blunt to certain waste and slime-soaked vaults under the Port of London, to learn the first beginnings of the high art of scrapping as it had been perfected in the great world of the underways: how to hit or kick a man so as to hurt him excruciatingly or make him violently sick, how to hit or kick "vital," how to use glass in one's garments as a club and to spread red ruin with various domestic implements, how to anticipate and demolish your adversary's intentions in other directions; all the pleasant devices, in fact, that had grown up among the disinherited of the great cities of the twentieth and twenty-first centuries, were spread out by a gifted exponent for Denton's learning. Blunt's bashfulness

fell from him as the instruction proceeded, and he developed a certain expert dignity, a quality of fatherly consideration. He treated Denton with the utmost consideration, only "flicking him up a bit" now and then, to keep the interest hot, and roaring with laughter at a happy fluke of Denton's that covered his mouth with blood.

"I'm always keardless of my mouth," said Blunt, admitting a weakness. "Always. It don't seem to matter, like, just getting bashed in the mouth—not if your chin's all right. Tastin' blood does me good. Always. But I better not 'it you again."

Denton went home, to fall asleep exhausted and wake in the small hours with aching limbs and all his bruises tingling. Was it worth while that he should go on living? He listened to Elizabeth's breathing, and remembering that he must have awaked her the previous night, he lay very still. He was sick with infinite disgust at the new conditions of his life. He hated it all, hated even the genial savage who had protected him so generously. The monstrous fraud of civilisation glared stark before his eyes; he saw it as a vast lunatic growth, producing a deepening torrent of savagery below, and above ever more flimsy gentility and silly wastefulness. He could see no redeeming reason, no touch of honour, either in the life he had led or in this life to which he had fallen. Civilisation presented itself as some catastrophic product as little concerned with men—save as victims—as a cyclone or a planetary collision. He, and therefore all mankind, seemed living utterly in vain. His mind sought some strange expedients of escape, if not for himself then at least for Elizabeth. But he meant them for himself. What if he hunted up Mwres and told him of their disaster? It came to him as an astonishing thing how utterly Mwres and Bindon had passed out of his range. Where were they? What were they doing? From that he passed to thoughts of utter dishonour. And finally, not arising in any way

out of this mental tumult, but ending it as dawn ends the night, came the clear and obvious conclusion of the night before: the conviction that he had to go through with things; that, apart from any remoter view and quite sufficient for all his thought and energy, he had to stand up and fight among his fellows and quit himself like a man.

The second night's instruction was perhaps less dreadful than the first; and the third was even endurable, for Blunt dealt out some praise. The fourth day Denton chanced upon the fact that the ferret-faced man was a coward. There passed a fortnight of smouldering days and feverish instruction at night; Blunt, with many blasphemies, testified that never had he met so apt a pupil; and all night long Denton dreamt of kicks and counters and gouges and cunning tricks. For all that time no further outrages were attempted, for fear of Blunt; and then came the second crisis. Blunt did not come one day—afterwards he admitted his deliberate intention—and through the tedious morning Whitey awaited the interval between the spells with an ostentatious impatience. He knew nothing of the scrapping lessons, and he spent the time in telling Denton and the vault generally of certain disagreeable proceedings he had in mind.

Whitey was not popular, and the vault disgorged to see him haze the new man with only a languid interest. But matters changed when Whitey's attempt to open the proceedings by kicking Denton in the face was met by an excellently executed duck, catch and throw, that completed the flight of Whitey's foot in its orbit and brought Whitey's head into the ash-heap that had once received Denton's. Whitey arose a shade whiter, and now blasphemously bent upon vital injuries. There were indecisive passages, foiled enterprises that deepened Whitey's evidently growing perplexity; and then things developed into a grouping of Denton uppermost with Whitey's throat in his hand, his knee on Whitey's chest,

and a tearful Whitey with a black face, protruding tongue and broken finger endeavouring to explain the misunderstanding by means of hoarse sounds. Moreover, it was evident that among the bystanders there had never been a more popular person than Denton.

Denton, with proper precaution, released his antagonist and stood up. His blood seemed changed to some sort of fluid fire, his limbs felt light and supernaturally strong. The idea that he was a martyr in the civilisation machine had vanished from his mind. He was a man in a world of men.

The little ferret-faced man was the first in the competition to pat him on the back. The lender of oil cans was a radiant sun of genial congratulation. . . . It seemed incredible to Denton that he had ever thought of despair.

Denton was convinced that not only had he to go through with things, but that he could. He sat on the canvas pallet expounding this new aspect to Elizabeth. One side of his face was bruised. She had not recently fought, she had not been patted on the back, there were no hot bruises upon her face, only a pallor and a new line or so about the mouth. She was taking the woman's share. She looked steadfastly at Denton in his new mood of prophecy. "I feel that there is something," he was saying, "something that goes on, a Being of Life in which we live and move and have our being, something that began fifty—a hundred million years ago, perhaps, that goes on—on: growing, spreading, to things beyond us—things that will justify us all. . . . That will explain and justify my fighting—these bruises, and all the pain of it. It's the chisel—yes, the chisel of the Maker. If only I could make you feel as I feel, if I could make you! You *will*, dear, I know you will."

"No," she said in a low voice. "No, I shall not."

"So I might have thought—"

She shook her head. "No," she said, "I have thought as well. What you say—doesn't convince me."

She looked at his face resolutely. "I hate it," she said, and caught at her breath. "You do not understand, you do not think. There was a time when you said things and I believed them. I am growing wiser. You are a man, you can fight, force your way. You do not mind bruises. You can be coarse and ugly, and still a man. Yes—it makes you. It makes you. You are right. Only a woman is not like that. We are different. We have let ourselves get civilised too soon. This underworld is not for us."

She paused and began again.

"I hate it! I hate this horrible canvas! I hate it more than—more than the worst that can happen. It hurts my fingers to touch it. It is horrible to the skin. And the women I work with day after day! I lie awake at nights and think how I may be growing like them. . . ."

She stopped. "I *am* growing like them," she cried passionately.

Denton stared at her distress. "But—" he said and stopped.

"You don't understand. What have I? What have I to save me? *You* can fight. Fighting is man's work. But women—women are different. . . . I have thought it all out, I have done nothing but think night and day. Look at the colour of my face! I cannot go on. I cannot endure this life. . . . I cannot endure it."

She stopped. She hesitated.

"You do not know all," she said abruptly, and for an instant her lips had a bitter smile. "I have been asked to leave you."

"Leave me!"

She made no answer save an affirmative movement of the head.

Denton stood up sharply. They stared at one another through a long silence.

Suddenly she turned herself about, and flung face downward upon their canvas bed. She did not sob, she made no sound. She lay still upon her face. After a vast, distressful void her shoulders heaved and she began to weep silently.

"Elizabeth!" he whispered—"Elizabeth!"

Very softly he sat down beside her, bent down, put his arm across her in a doubtful caress, seeking vainly for some clue to this intolerable situation.

"Elizabeth," he whispered in her ear.

She thrust him from her with her hand. "I cannot bear a child to be a slave!" and broke out into loud and bitter weeping.

Denton's face changed—became blank dismay. Presently he slipped from the bed and stood on his feet. All the complacency had vanished from his face, had given place to impotent rage. He began to rave and curse at the intolerable forces which pressed upon him, at all the accidents and hot desires and heedlessness that mock the life of man. His little voice rose in that little room, and he shook his fist, this animalcule of the earth, at all that environed him about, at the millions about him, at his past and future and all the insensate vastness of the overwhelming city.

V.—*Bindon Intervenes*

In Bindon's younger days he had dabbled in speculation and made three brilliant flukes. For the rest of his life he had the wisdom to let gambling alone, and the conceit to believe himself a very clever man. A certain desire for influence and reputation interested him in the business intrigues of the giant city in which his flukes were made. He became at last one of the most influential shareholders in the company that owned the London flying-stages to which the aeroplanes came

from all parts of the world. This much for his public activities. In his private life he was a man of pleasure. And this is the story of his heart.

But before proceeding to such depths, one must devote a little time to the exterior of this person. Its physical basis was slender, and short, and dark; and the face, which was fine-featured and assisted by pigments, varied from an insecure self-complacency to an intelligent uneasiness. His face and head had been depilated, according to the cleanly and hygienic fashion of the time, so that the colour and contour of his hair varied with his costume. This he was constantly changing.

At times he would distend himself with pneumatic vestments in the rococo vein. From among the billowy developments of this style, and beneath a translucent and illuminated head-dress, his eye watched jealously for the respect of the less fashionable world. At other times he emphasised his elegant slenderness in close-fitting garments of black satin. For effects of dignity he would assume broad pneumatic shoulders, from which hung a robe of carefully arranged folds of China silk, and a classical Bindon in pink tights was also a transient phenomenon in the eternal pageant of Destiny. In the days when he hoped to marry Elizabeth, he sought to impress and charm her, and at the same time to take off something of his burthen of forty years, by wearing the last fancy of the contemporary buck, a costume of elastic material with distensible warts and horns, changing in colour as he walked, by an ingenious arrangement of versatile chromatophores. And no doubt, if Elizabeth's affection had not been already engaged by the worthless Denton, and if her tastes had not had that odd bias for old-fashioned ways, this extremely *chic* conception would have ravished her. Bindon had consulted Elizabeth's father before presenting himself in this garb—he was one of those men who always invite criticism of their costume—and Mwres had pronounced him all

that the heart of woman could desire. But the affair of the hypnotist proved that his knowledge of the heart of woman was incomplete.

Bindon's idea of marrying had been formed some little time before Mwres threw Elizabeth's budding womanhood in his way. It was one of Bindon's most cherished secrets that he had a considerable capacity for a pure and simple life of a grossly sentimental type. The thought imparted a sort of pathetic seriousness to the offensive and quite inconsequent and unmeaning excesses, which he was pleased to regard as dashing wickedness, and which a number of good people also were so unwise as to treat in that desirable manner. As a consequence of these excesses, and perhaps by reason also of an inherited tendency to early decay, his liver became seriously affected, and he suffered increasing inconvenience when travelling by aeroplane. It was during his convalescence from a protracted bilious attack that it occurred to him that in spite of all the terrible fascinations of Vice, if he found a beautiful, gentle, good young woman of a not too violently intellectual type to devote her life to him, he might yet be saved to Goodness, and even rear a spirited family in his likeness to solace his declining years. But like so many experienced men of the world, he doubted if there were any good women. Of such as he had heard tell he was outwardly sceptical and privately much afraid.

When the aspiring Mwres effected his introduction to Elizabeth, it seemed to him that his good fortune was complete. He fell in love with her at once. Of course, he had always been falling in love since he was sixteen, in accordance with the extremely varied recipes to be found in the accumulated literature of many centuries. But this was different. This was real love. It seemed to him to call forth all the lurking goodness in his nature. He felt that for her sake he could give up a way of life that had already produced the gravest

from all parts of the world. This much for his public activities. In his private life he was a man of pleasure. And this is the story of his heart.

But before proceeding to such depths, one must devote a little time to the exterior of this person. Its physical basis was slender, and short, and dark; and the face, which was fine-featured and assisted by pigments, varied from an insecure self-complacency to an intelligent uneasiness. that the heart of woman could desire. But the affair of the hypnotist proved that his knowledge of the heart of woman was incomplete.

Bindon's idea of marrying had been formed some little time before Mwres threw Elizabeth's budding womanhood in his way. It was one of Bindon's most cherished secrets that he had a considerable capacity for a pure and simple life of a grossly sentimental type. The thought imparted a sort of pathetic seriousness to the offensive and quite inconsequent and unmeaning excesses, which he was pleased to regard as dashing wickedness, and which a number of good people also were so unwise as to treat in that desirable manner. As a consequence of these excesses, and perhaps by reason also of an inherited tendency to early decay, his liver became seriously affected, and he suffered increasing inconvenience when travelling by aeroplane. It was during his convalescence from a protracted bilious attack that it occurred to him that in spite of all the terrible fascinations of Vice, if he found a beautiful, gentle, good young woman of a not too violently intellectual type to devote her life to him, he might yet be saved to Goodness, and even rear a spirited family in his likeness to solace his declining years. But like so many experienced men of the world, he doubted if there were any good women. Of such as he had heard tell he was outwardly sceptical and privately much afraid.

When the aspiring Mwres effected his introduction to Elizabeth, it seemed to him that his good fortune was complete. He fell in love with her at once. Of course, he had always been falling in love since he was sixteen, in accordance with the extremely varied recipes to be found in the accumulated literature of many centuries. But this was different. This was real love. It seemed to him to call forth all the lurking goodness in his nature. He felt that for her sake he could give up a way of life that had already produced the gravest

lesions on his liver and nervous system. His imagination presented him with idyllic pictures of the life of the reformed rake. He would never be sentimental with her, or silly; but always a little cynical and bitter, as became the past. Yet he was sure she would have an intuition of his real greatness and goodness. And in due course he would confess things to her, pour his version of what he regarded as his wickedness—showing what a complex of Goethe, and Benvenuto Cellini, and Shelley, and all those other chaps he really was—into her shocked, very beautiful, and no doubt sympathetic ear. And preparatory to these things he wooed her with infinite subtlety and respect. And the reserve with which Elizabeth treated him seemed nothing more nor less than an exquisite modesty touched and enhanced by an equally exquisite lack of ideas.

Bindon knew nothing of her wandering affections, nor of the attempt made by Mwres to utilise hypnotism as a corrective to this digression of her heart; he conceived he was on the best of terms with Elizabeth, and had made her quite successfully various significant presents of jewellery and the more virtuous cosmetics, when her elopement with Denton threw the world out of gear for him. His first aspect of the matter was rage begotten of wounded vanity, and as Mwres was the most convenient person, he vented the first brunt of it upon him.

He went immediately and insulted the desolate father grossly, and then spent an active and determined day going to and fro about the city and interviewing people in a consistent and partly-successful attempt to ruin that matrimonial speculator. The effectual nature of these activities gave him a temporary exhilaration, and he went to the dining-place he had frequented in his wicked days in a devil-may-care frame of mind, and dined altogether too amply and cheerfully with two other golden youths in the early forties. He threw up the game; no woman was worth being good for, and

he astonished even himself by the strain of witty cynicism he developed. One of the other desperate blades, warmed with wine, made a facetious allusion to his disappointment, but at the time this did not seem unpleasant.

The next morning found his liver and temper inflamed. He kicked his phonographic-news machine to pieces, dismissed his valet, and resolved that he would perpetrate a terrible revenge upon Elizabeth. Or Denton. Or somebody. But anyhow, it was to be a terrible revenge; and the friend who had made fun at him should no longer see him in the light of a foolish girl's victim. He knew something of the little property that was due to her, and that this would be the only support of the young couple until Mwres should relent. If Mwres did not relent, and if unpropitious things should happen to the affair in which Elizabeth's expectations lay, they would come upon evil times and be sufficiently amenable to temptation of a sinister sort. Bindon's imagination, abandoning its beautiful idealism altogether, expanded the idea of temptation of a sinister sort. He figured himself as the implacable, the intricate and powerful man of wealth pursuing this maiden who had scorned him. And suddenly her image came upon his mind vivid and dominant, and for the first time in his life Bindon realised something of the real power of passion.

His imagination stood aside like a respectful footman who has done his work in ushering in the emotion.

"My God!" cried Bindon: "I will have her! If I have to kill myself to get her! And that other fellow—!"

After an interview with his medical man and a penance for his overnight excesses in the form of bitter drugs, a mitigated but absolutely resolute Bindon sought out Mwres. Mwres he found properly smashed, and impoverished and humble, in a mood of frantic self-preservation, ready to sell himself body and soul, much

more any interest in a disobedient daughter, to recover his lost position in the world. In the reasonable discussion that followed, it was agreed that these misguided young people should be left to sink into distress, or possibly even assisted towards that improving discipline by Bindon's financial influence.

"And then?" said Mwres.

"They will come to the Labour Company," said Bindon. "They will wear the blue canvas."

"And then?"

"She will divorce him," he said, and sat for a moment intent upon that prospect. For in those days the austere limitations of divorce of Victorian times were extraordinarily relaxed, and a couple might separate on a hundred different scores.

Then suddenly Bindon astonished himself and Mwres by jumping to his feet. "She *shall* divorce him!" he cried. "I will have it so—I will work it so. By God! it shall be so. He shall be disgraced, so that she must. He shall be smashed and pulverised."

The idea of smashing and pulverising inflamed him further. He began a Jovian pacing up and down the little office. "I will have her," he cried. "I *will* have her! Heaven and Hell shall not save her from me!" His passion evaporated in its expression, and left him at the end simply histrionic. He struck an attitude and ignored with heroic determination a sharp twinge of pain about the diaphragm. And Mwres sat with his pneumatic cap deflated and himself very visibly impressed.

And so, with a fair persistency, Bindon sat himself to the work of being Elizabeth's malignant providence, using with ingenious dexterity every particle of advantage wealth in those days gave a man over his fellow-creatures. A resort to the consolations of religion hindered these operations not at all. He would go and talk with an interesting, experienced and sympathetic Father of the Huysmanite sect of the Isis cult, about all the irrational

little proceedings he was pleased to regard as his Heaven-dismaying wickedness, and the interesting, experienced and sympathetic Father representing Heaven dismayed, would with a pleasing affectation of horror, suggest simple and easy penances, and recommend a monastic foundation that was airy, cool, hygienic, and not vulgarised, for viscerally disordered penitent sinners of the refined and wealthy type. And after these excursions, Bindon would come back to London quite active and passionate again. He would machinate with really considerable energy, and repair to a certain gallery high above the street of moving ways, from which he could view the entrance to the barrack of the Labour Company in the ward which sheltered Denton and Elizabeth. And at last one day he saw Elizabeth go in, and thereby his passion was renewed.

So in the fullness of time the complicated devices of Bindon ripened, and he could go to Mwres and tell him that the young people were near despair.

"It's time for you," he said, "to let your parental affections have play. She's been in blue canvas some months, and they've been cooped together in one of those Labour dens, and the little girl is dead. She knows now what his manhood is worth to her, by way of protection, poor girl. She'll see things now in a clearer light. You go to her—I don't want to appear in this affair yet—and point out to her how necessary it is that she should get a divorce from him. . . ."

"She's obstinate," said Mwres doubtfully.

"Spirit!" said Bindon. "She's a wonderful girl—a wonderful girl!"

"She'll refuse."

"Of course she will. But leave it open to her. Leave it open to her. And some day—in that stuffy den, in that irksome, toilsome life they can't help it—they'll have a quarrel. And then—"

Mwres meditated over the matter, and did as he was told.

Then Bindon, as he had arranged with his spiritual adviser, went into retreat. The retreat of the Huysmanite sect was a beautiful place, with the sweetest air in London, lit by natural sunlight, and with restful quadrangles of real grass open to the sky, where at the same time the penitent man of pleasure might enjoy all the pleasures of loafing and all the satisfaction of distinguished austerity. And, save for participation in the simple and wholesome dietary of the place and in certain magnificent chants, Bindon spent all his time in meditation upon the theme of Elizabeth, and the extreme purification his soul had undergone since he first saw her, and whether he would be able to get a dispensation to marry her from the experienced and sympathetic Father in spite of the approaching "sin" of her divorce; and then . . . Bindon would lean against a pillar of the quadrangle and lapse into reveries on the superiority of virtuous love to any other form of indulgence. A curious feeling in his back and chest that was trying to attract his attention, a disposition to be hot or shiver, a general sense of ill-health and cutaneous discomfort he did his best to ignore. All that of course belonged to the old life that he was shaking off.

When he came out of retreat he went at once to Mwres to ask for news of Elizabeth. Mwres was clearly under the impression that he was an exemplary father, profoundly touched about the heart by his child's unhappiness. "She was pale," he said, greatly moved; "She was pale. When I asked her to come away and leave him—and be happy—she put her head down upon the table"—Mwres sniffed—"and cried."

His agitation was so great that he could say no more.

"Ah!" said Bindon, respecting this manly grief. "Oh!" said Bindon quite suddenly, with his hand to his side.

Mwres looked up sharply out of the pit of his sorrows,

startled. "What's the matter?" he asked, visibly concerned.

"A most violent pain. Excuse me! You were telling me about Elizabeth."

And Mwres, after a decent solicitude for Bindon's pain, proceeded with his report. It was even unexpectedly hopeful. Elizabeth, in her first emotion at discovering that her father had not absolutely deserted her, had been frank with him about her sorrows and disgusts.

"Yes," said Bindon, magnificently, "I shall have her yet." And then that novel pain twitched him for the second time.

For these lower pains the priest was comparatively ineffectual, inclining rather to regard the body and them as mental illusions amenable to contemplation; so Bindon took it to a man of a class he loathed, a medical man of extraordinary repute and incivility. "We must go all over you," said the medical man, and did so with the most disgusting frankness. "Did you ever bring any children into the world?" asked this gross materialist among other impertinent questions.

"Not that I know of," said Bindon, too amazed to stand upon his dignity.

"Ah!" said the medical man, and proceeded with his punching and sounding. Medical science in those days was just reaching the beginnings of precision. "You'd better go right away," said the medical man, "and make the Euthanasia. The sooner the better."

Bindon gasped. He had been trying not to understand the technical explanations and anticipations in which the medical man had indulged.

"I say!" he said. "But do you mean to say . . . Your science . . ."

"Nothing," said the medical man. "A few opiates. The thing is your own doing, you know, to a certain extent."

"I was sorely tempted in my youth."

"It's not that so much. But you come of a bad stock. Even if you'd have taken precautions you'd have had bad times to wind up with. The mistake was getting born. The indiscretions of the parents. And you've shirked exercise, and so forth."

"I had no one to advise me."

"Medical men are always willing."

"I was a spirited young fellow."

"We won't argue; the mischief's done now. You've lived. We can't start you again. You ought never to have started at all. Frankly—the Euthanasia!"

Bindon hated him in silence for a space. Every word of this brutal expert jarred upon his refinements. He was so gross, so impermeable to all the subtler issues of being. But it is no good picking a quarrel with a doctor. "My religious beliefs," he said. "I don't approve of suicide."

"You've been doing it all your life."

"Well, anyhow, I've come to take a serious view of life now."

"You're bound to, if you go on living. You'll hurt. But for practical purposes it's late. However, if you mean to do that—perhaps I'd better mix you a little something. You'll hurt a great deal. These little twinges . . ."

"Twinges!"

"Mere preliminary notices."

"How long can I go on? I mean, before I hurt—really."

"You'll get it hot soon. Perhaps three days."

Bindon tried to argue for an extension of time, and in the midst of his pleading gasped, put his hand to his side. Suddenly the extraordinary pathos of his life came to him clear and vivid. "It's hard," he said. "It's infernally hard! I've been no man's enemy but my own. I've always treated everybody quite fairly."

The medical man stared at him without any sympathy for some seconds. He was reflecting how excellent it

was that there were no more Bindons to carry on that line of pathos. He felt quite optimistic. Then he turned to his telephone and ordered up a prescription from the Central Pharmacy.

He was interrupted by a voice behind him. "By God!" cried Bindon; "I'll have her yet."

The physician stared over his shoulder at Bindon's expression, and then altered the prescription.

So soon as this painful interview was over, Bindon gave way to rage. He settled that the medical man was not only an unsympathetic brute and wanting in the first beginnings of a gentleman, but also highly incompetent; and he went off to four other practitioners in succession, with a view to the establishment of this intuition. But to guard against surprises he kept that little prescription in his pocket. With each he began by expressing his grave doubts of the first doctor's intelligence, honesty and professional knowledge, and then stated his symptoms, suppressing only a few more material facts in each case. These were always subsequently elicited by the doctor. In spite of the welcome depreciation of another practitioner, none of these eminent specialists would give Bindon any hope of eluding the anguish and helplessness that loomed now close upon him. To the last of them he unburdened his mind of an accumulated disgust with medical science. "After centuries and centuries," he exclaimed hotly; "and you can do nothing—except admit your helplessness. I say, 'save me'—and what do you do?"

"No doubt it's hard on you," said the doctor. "But you should have taken precautions."

"How was I to know?"

"It wasn't our place to run after you," said the medical man, picking a thread of cotton from his purple sleeve. "Why should we save *you* in particular? You see—from one point of view—people with imaginations and passions like yours have to go—they have to go."

"Go?"

"Die out. It's an eddy."

He was a young man with a serene face. He smiled at Bindon. "We get on with research, you know; we give advice when people have the sense to ask for it. And we bide our time."

"Bide your time?"

"We hardly know enough yet to take over the management, you know."

"The management?"

"You needn't be anxious. Science is young yet. It's got to keep on growing for a few generations. We know enough now to know we don't know enough yet. . . . But the time is coming, all the same. *You* won't see the time. But, between ourselves, you rich men and party bosses, with your natural play of the passions and patriotism and religion and so forth, have made rather a mess of things; haven't you? These Underways! And all that sort of thing. Some of us have a sort of fancy that in time we may know enough to take over a little more than the ventilation and drains. Knowledge keeps on piling up, you know. It keeps on growing. And there's not the slightest hurry for a generation or so. Some day—some day, men will live in a different way." He looked at Bindon and meditated. "There'll be a lot of dying out before that day can come."

Bindon attempted to point out to this young man how silly and irrelevant such talk was to a sick man like himself, how impertinent and uncivil it was to him, an older man occupying a position in the official world of extraordinary power and influence. He insisted that a doctor was paid to cure people—he laid great stress on "*paid*"—and had no business to glance even for a moment at "those other questions." "But we do," said the young man, insisting upon facts, and Bindon lost his temper.

His indignation carried him home. That these in-

competent impostors, who were unable to save the life of a really influential man like himself, should dream of some day robbing the legitimate property owners of social control, of inflicting one knew not what tyranny upon the world. Curse science! He fumed over the intolerable prospect for some time, and then the pain returned, and he recalled the made-up prescription of the first doctor, still happily in his pocket. He took a dose forthwith.

It calmed and soothed him greatly, and he could sit down in his most comfortable chair beside his library (of phonographic records), and think over the altered aspect of affairs. His indignation passed, his anger and his passion crumbled under the subtle attack of that prescription, pathos became his sole ruler. He stared about him, at his magnificent and voluptuously appointed apartment, at his statuary and discreetly veiled pictures, and all the evidences of a cultivated and elegant wickedness; he touched a stud and the sad pipings of Tristan's shepherd filled the air. His eye wandered from one object to another. They were costly and gross and florid—but they were his. They presented in concrete form his ideals, his conceptions of beauty and desire, his idea of all that is precious in life. And now—he must leave it all like a common man. He was, he felt, a slender and delicate flame, burning out. So must all life flame up and pass, he thought. His eyes filled with tears.

Then it came into his head that he was alone. Nobody cared for him, nobody needed him! at any moment he might begin to hurt vividly. He might even howl. Nobody would mind. According to all the doctors he would have excellent reason for howling in a day or so. It recalled what his spiritual adviser had said of the decline of faith and fidelity, the degeneration of the age. He beheld himself as a pathetic proof of this; he, the subtle, able, important, voluptuous, cynical, complex Bindon, possibly howling, and not one

faithful simple creature in all the world to howl in sympathy. Not one faithful simple soul was there—no shepherd to pipe to him! Had all such faithful simple creatures vanished from this harsh and urgent earth? He wondered whether the horrid vulgar crowd that perpetually went about the city could possibly know what he thought of them. If they did he felt sure *some* would try to earn a better opinion. Surely the world went from bad to worse. It was becoming impossible for Bindons. Perhaps some day . . . He was quite sure that the one thing he had needed in life was sympathy. For a time he regretted that he left no sonnets—no enigmatical pictures or something of that sort behind him to carry on his being until at last the sympathetic mind should come. . . .

It seemed incredible to him that this that came was extinction. Yet his sympathetic spiritual guide was in this matter annoyingly figurative and vague. Curse science! It had undermined all faith—all hope. To go out, to vanish from theatre and street, from office and dining-place, from the dear eyes of womankind. And not to be missed! On the whole to leave the world happier!

He reflected that he had never worn his heart upon his sleeve. Had he after all been *too* unsympathetic? Few people could suspect how subtly profound he really was beneath the mask of that cynical gaiety of his. They would not understand the loss they had suffered. Elizabeth, for example, had not suspected. . . .

He had reserved that. His thoughts having come to Elizabeth gravitated about her for some time. How *little* Elizabeth understood him!

That thought became intolerable. Before all other things he must set that right. He realised that there was still something for him to do in life, his struggle against Elizabeth was even yet not over. He could never overcome her now, as he had hoped and prayed. But he might still impress her!

From that idea he expanded. He might impress her profoundly—he might impress her so that she should for evermore regret her treatment of him. The thing that she must realise before everything else was his magnanimity. His magnanimity! Yes! he had loved her with amazing greatness of heart. He had not seen it so clearly before—but of course he was going to leave her all his property. He saw it instantly, as a thing determined and inevitable. She would think how good he was, how spaciouly generous; surrounded by all that makes life tolerable from his hand, she would recall with infinite regret her scorn and coldness. And when she sought expression for that regret, she would find that occasion gone forever, she should be met by a locked door, by a disdainful stillness, by a white dead face. He closed his eyes and remained for a space imagining himself that white dead face.

From that he passed to other aspects of the matter, but his determination was assured. He meditated elaborately before he took action, for the drug he had taken inclined him to a lethargic and dignified melancholy. In certain respects he modified details. If he left all his property to Elizabeth it would include the voluptuously appointed room he occupied, and for many reasons he did not care to leave that to her. On the other hand, it had to be left to some one. In his clogged condition this worried him extremely.

In the end he decided to leave it to the sympathetic exponent of the fashionable religious cult whose conversation had been so pleasing in the past. "*He* will understand," said Bindon with a sentimental sigh. "*He* knows what Evil means—he understands something of the Stupendous Fascination of the Sphinx of Sin. Yes—he will understand." By that phrase it was that Bindon was pleased to dignify certain unhealthy and undignified departures from sane conduct to which a misguided vanity and an ill-controlled curiosity had led him. He sat for a space thinking how very Hellenic

and Italian and Neronic, and all those things, he had been. Even now—might one not try a sonnet? A penetrating voice to echo down the ages, sensuous, sinister, and sad. For a space he forgot Elizabeth. In the course of half an hour he spoilt three phonographic coils, got a headache, took a second dose to calm himself, and reverted to magnanimity and his former design.

At last he faced the unpalatable problem of Denton. It needed all his newborn magnanimity before he could swallow the thought of Denton; but at last this greatly misunderstood man, assisted by his sedative and the near approach of death, effected even that. If he was at all exclusive about Denton, if he should display the slightest distrust, if he attempted any specific exclusion of that young man, she might—*misunderstand*. Yes—she should have her Denton still. His magnanimity must go even to that. He tried to think only of Elizabeth in the matter.

He rose with a sigh, and limped across to the telephonic apparatus that communicated with his solicitor. In ten minutes a will duly attested and with its proper thumb-mark signature lay in the solicitor's office three miles away. And then for a space Bindon sat very still.

Suddenly he started out of a vague reverie and pressed an investigatory hand to his side.

Then he jumped eagerly to his feet and rushed to the telephone. The Euthanasia Company had rarely been called by a client in a greater hurry.

So it came at last that Denton and his Elizabeth, against all hope, returned unseparated from the labour servitude to which they had fallen. Elizabeth came out from her cramped subterranean den of metal-beaters and all the sordid circumstances of blue canvas, as one comes out of a nightmare. Back towards the sunlight their fortune took them; once the bequest was known to them, the bare thought of another day's hammering became intolerable. They went up long lifts and stairs

to levels that they had not seen since the days of their disaster. At first she was full of this sensation of escape; even to think of the underways was intolerable; only after many months could she begin to recall with sympathy the faded women who were still below there, murmuring scandals and reminiscences and folly, and tapping away their lives.

Her choice of the apartments they presently took expressed the vehemence of her release. They were rooms upon the very verge of the city; they had a roof space and a balcony upon the city wall, wide open to the sun and wind, the country and the sky.

And in that balcony comes the last scene in this story. It was a summer sunset, and the hills of Surrey were very blue and clear. Denton leant upon the balcony regarding them, and Elizabeth sat by his side. Very wide and spacious was the view, for their balcony hung five hundred feet above the ancient level of the ground. The oblongs of the Food Company, broken here and there by the ruins—grotesque little holes and sheds—of the ancient suburbs, and intersected by shining streams of sewage, passed at last into a remote diapering at the foot of the distant hills. There once had been the squatting-place of the children of Uya. On those further slopes gaunt machines of unknown import worked slackly at the end of their spell, and the hill crest was set with stagnant wind vanes. Along the great south road the Labour Company's field workers in huge wheeled mechanical vehicles, were hurrying back to their meals, their last spell finished. And through the air a dozen little private *aëropiles* sailed down towards the city. Familiar scene as it was to the eyes of Denton and Elizabeth, it would have filled the minds of their ancestors with incredulous amazement. Denton's thoughts fluttered towards the future in a vain attempt at what that scene might be in another two hundred years, and, recoiling, turned towards the past.

He shared something of the growing knowledge of

the time; he could picture the quaint smoke-grimed Victorian city with its narrow little roads of beaten earth, its wide common-land, ill-organised, ill-built suburbs, and irregular enclosures; the old countryside of the Stuart times, with its little villages and its petty London; the England of the monasteries, the far older England of the Roman dominion, and then before that a wild country with here and there the huts of some warring tribe. These huts must have come and gone and come again through a space of years that made the Roman camp and villa seem but yesterday; and before those years, before even the huts, there had been men in the valley. Even then—so recent had it all been when one judged it by the standards of geological time—this valley had been here; and those hills yonder, higher, perhaps, and snow-tipped, had still been yonder hills, and the Thames had flowed down from the Cotswolds to the sea. But the men had been but the shapes of men, creatures of darkness and ignorance, victims of beasts and floods, storms and pestilence and incessant hunger. They had held a precarious foothold amidst bears and lions and all the monstrous violence of the past. Already some at least of these enemies were overcome. . . .

For a time Denton pursued the thoughts of this spacious vision, trying in obedience to his instinct to find his place and proportion in the scheme.

"It has been chance," he said, "it has been luck. We have come through. It happens we have come through. Not by any strength of our own. . . .

"And yet . . . No. I don't know."

He was silent for a long time before he spoke again.

"After all—there is a long time yet. There have scarcely been men for twenty thousand years—and there has been life for twenty millions. And what are generations? What are generations? It is enormous, and we are so little. Yet we know—we feel. We are not dumb atoms, we are part of it—part of it—to the limits

of our strength and will. Even to die is part of it. Whether we die or live, we are in the making. . . .

"As time goes on—*perhaps*—men will be wiser. . . . Wiser. . . .

"Will they ever understand?"

He became silent again. Elizabeth said nothing to these things, but she regarded his dreaming face with infinite affection. Her mind was not very active that evening. A great contentment possessed her. After a time she laid a gentle hand on his beside her. He fondled it softly, still looking out upon the spacious gold-woven view. So they sat as the sun went down. Until presently Elizabeth shivered.

Denton recalled himself abruptly from these spacious issues of his leisure, and went in to fetch her a shawl.

STORY THE FIFTH

The Man who could work Miracles

A Pantoum in Prose

IT is doubtful whether the gift was innate. For my own part, I think it came to him suddenly. Indeed, until he was thirty he was a sceptic, and did not believe in miraculous powers. And here, since it is the most convenient place, I must mention that he was a little man, and had eyes of a hot brown, very erect red hair, a moustache with ends that he twisted up, and freckles. His name was George McWhirter Fotheringay—not the sort of name by any means to lead to any expectation of miracles—and he was clerk at Gomshott's. He was greatly addicted to assertive argument. It was while he was asserting the impossibility of miracles that he had his first intimation of his extraordinary powers. This particular argument was being held in the bar of the Long Dragon, and Toddy Beamish was conducting the opposition by a monotonous but effective "So you say," that drove Mr. Fotheringay to the very limit of his patience.

There were present, besides these two, a very dusty cyclist, landlord Cox, and Miss Maybridge, the perfectly respectable and rather portly barmaid of the Dragon.

Miss Maybridge was standing with her back to Mr. Fotheringay, washing glasses; the others were watching him, more or less amused by the present ineffectiveness of the assertive method. Goaded by the Torres Vedras tactics of Mr. Beamish, Mr. Fotheringay determined to make an unusual rhetorical effort. "Looky here, Mr. Beamish," said Mr. Fotheringay. "Let us clearly understand what a miracle is. It's something contrariwise to the course of nature done by power of Will, something what couldn't happen without being specially willed."

"So *you* say," said Mr. Beamish, repulsing him.

Mr. Fotheringay appealed to the cyclist, who had hitherto been a silent auditor, and received his assent—given with a hesitating cough and a glance at Mr. Beamish. The landlord would express no opinion, and Mr. Fotheringay, returning to Mr. Beamish, received the unexpected concession of a qualified assent to his definition of a miracle.

"For instance," said Mr. Fotheringay, greatly encouraged. "Here would be a miracle. That lamp, in the natural course of nature, couldn't burn like that upsy-down, could it, Beamish?"

"*You* say it couldn't," said Beamish.

"And you?" said Fotheringay. "You don't mean to say—eh?"

"No," said Beamish reluctantly. "No, it couldn't."

"Very well," said Mr. Fotheringay. "Then here comes someone, as it might be me, along here, and stands as it might be here, and says to that lamp, as I might do, collecting all my will—'Turn upsy-down without breaking, and go on burning steady,' and—Hullo!"

It was enough to make anyone say "Hullo!" The impossible, the incredible, was visible to them all. The lamp hung inverted in the air, burning quietly with its flame pointing down. It was as solid, as indisputable as ever a lamp was, the prosaic common lamp of the Long Dragon bar.

Mr. Fotheringay stood with an extended forefinger

and the knitted brows of one anticipating a catastrophic smash. The cyclist, who was sitting next the lamp, ducked and jumped across the bar. Everybody jumped, more or less. Miss Maybridge turned and screamed. For nearly three seconds the lamp remained still. A faint cry of mental distress came from Mr. Fotheringay. "I can't keep it up," he said, "any longer." He staggered back, and the inverted lamp suddenly flared, fell against the corner of the bar, bounced aside, smashed upon the floor, and went out.

It was lucky it had a metal receiver, or the whole place would have been in a blaze. Mr. Cox was the first to speak, and his remark, shorn of needless excrescences, was to the effect that Fotheringay was a fool. Fotheringay was beyond disputing even so fundamental a proposition as that! He was astonished beyond measure at the thing that had occurred. The subsequent conversation threw absolutely no light on the matter so far as Fotheringay was concerned; the general opinion not only followed Mr. Cox very closely but very vehemently. Everyone accused Fotheringay of a silly trick, and presented him to himself as a foolish destroyer of comfort and security. His mind was in a tornado of perplexity, he was himself inclined to agree with them, and he made a remarkably ineffectual opposition to the proposal of his departure.

He went home flushed and heated, coat-collar crumpled, eyes smarting and ears red. He watched each of the ten street lamps nervously as he passed it. It was only when he found himself alone in his little bedroom in Church Row that he was able to grapple seriously with his memories of the occurrence, and ask, "What on earth happened?"

He had removed his coat and boots, and was sitting on the bed with his hands in his pockets repeating the text of his defence for the seventeenth time, "I didn't want the confounded thing to upset," when it occurred to him that at the precise moment he had said the

commanding words he had inadvertently willed the thing he said, and that when he had seen the lamp in the air he had felt that it depended on him to maintain it there without being clear how this was to be done. He had not a particularly complex mind, or he might have stuck for a time at that "inadvertently willed," embracing, as it does, the abstrusest problems of voluntary action; but as it was, the idea came to him with a quite acceptable haziness. And from that, following, as I must admit, no clear logical path, he came to the test of experiment.

He pointed resolutely to his candle and collected his mind, though he felt he did a foolish thing. "Be raised up," he said. But in a second that feeling vanished. The candle was raised, hung in the air one giddy moment, and as Mr. Fotheringay gasped, fell with a smash on his toilet-table, leaving him in darkness save for the expiring glow of its wick.

For a time Mr. Fotheringay sat in the darkness, perfectly still. "It did happen, after all," he said. "And 'ow I'm to explain it I *don't* know." He sighed heavily, and began feeling in his pockets for a match. He could find none, and he rose and groped about the toilet-table. "I wish I had a match," he said. He resorted to his coat, and there were none there, and then it dawned upon him that miracles were possible even with matches. He extended a hand and scowled at it in the dark. "Let there be a match in that hand," he said. He felt some light object fall across his palm, and his fingers closed upon a match.

After several ineffectual attempts to light this, he discovered it was a safety-match. He threw it down, and then it occurred to him that he might have willed it lit. He did, and perceived it burning in the midst of his toilet-table mat. He caught it up hastily, and it went out. His perception of possibilities enlarged, and he felt for and replaced the candle in its candlestick. "Here! *you* be lit," said Mr. Fotheringay, and forth-

with the candle was flaring, and he saw a little black hole in the toilet-cover, with a wisp of smoke rising from it. For a time he stared from this to the little flame and back, and then looked up and met his own gaze in the looking glass. By this help he communed with himself in silence for a time.

"How about miracles now?" said Mr. Fotheringay at last, addressing his reflection.

The subsequent meditations of Mr. Fotheringay were of a severe but confused description. So far as he could see, it was a case of pure willing with him. The nature of his first experiences disinclined him for any further experiments except of the most cautious type. But he lifted a sheet of paper, and turned a glass of water pink and then green, and he created a snail, which he miraculously annihilated, and got himself a miraculous new tooth-brush. Somewhen in the small hours he had reached the fact that his will-power must be of a particularly rare and pungent quality, a fact of which he had certainly had inklings before, but no certain assurance. The scare and perplexity of his first discovery was now qualified by pride in this evidence of singularity and by vague intimations of advantage. He became aware that the church clock was striking one, and as it did not occur to him that his daily duties at Gomshott's might be miraculously dispensed with, he resumed undressing, in order to get to bed without further delay. As he struggled to get his shirt over his head, he was struck with a brilliant idea. "Let me be in bed," he said, and found himself so. "Undressed," he stipulated; and, finding the sheets cold, added hastily, "and in my night-shirt—no, in a nice soft woollen nightshirt. Ah!" he said with immense enjoyment. "And now let me be comfortably asleep. . . ."

He awoke at his usual hour and was pensive all through breakfast-time, wondering whether his overnight experience might not be a particularly vivid dream. At length his mind turned again to cautious

experiments. For instance, he had three eggs for breakfast; two his landlady had supplied, good, but shabby, and one was a delicious fresh goose-egg, laid, cooked, and served by his extraordinary will. He hurried off to Gomshott's in a state of profound but carefully concealed excitement, and only remembered the shell of the third egg when his landlady spoke of it that night. All day he could do no work because of this astonishingly new self-knowledge, but this caused him no inconvenience, because he made up for it miraculously in his last ten minutes.

As the day wore on his state of mind passed from wonder to elation, albeit the circumstances of his dismissal from the Long Dragon were still disagreeable to recall, and a garbled account of the matter that had reached his colleagues led to some badinage. It was evident he must be careful how he lifted frangible articles, but in other ways his gift promised more and more as he turned it over in his mind. He intended among other things to increase his personal property by unostentatious acts of creation. He called into existence a pair of very splendid diamond studs, and hastily annihilated them again as young Gomshott came across the counting-house to his desk. He was afraid young Gomshott might wonder how he had come by them. He saw quite clearly the gift required caution and watchfulness in its exercise, but so far as he could judge the difficulties attending its mastery would be no greater than those he had already faced in the study of cycling. It was that analogy, perhaps, quite as much as the feeling that he would be unwelcome in the Long Dragon, that drove him out after supper into the lane beyond the gas-works, to rehearse a few miracles in private.

There was possibly a certain want of originality in his attempts, for apart from his will-power Mr. Fotheringay was not a very exceptional man. The miracle of Moses' rod came to his mind, but the night was dark and unfavourable to the proper control of large miraculous

snakes. Then he recollected the story of "Tannhäuser" that he had read on the back of the Philharmonic programme. That seemed to him singularly attractive and harmless. He stuck his walking-stick—a very nice Poona-Penang lawyer—into the turf that edged the footpath, and commanded the dry wood to blossom. The air was immediately full of the scent of roses, and by means of a match he saw for himself that this beautiful miracle was indeed accomplished. His satisfaction was ended by advancing footsteps. Afraid of a premature discovery of his powers, he addressed the blossoming stick hastily: "Go back." What he meant was "Change back;" but of course he was confused. The stick receded at a considerable velocity, and incontinently came a cry of anger and a bad word from the approaching person. "Who are you throwing brambles at, you fool?" cried a voice. "That got me on the shin."

"I'm sorry, old chap," said Mr. Fotheringay, and then realising the awkward nature of the explanation, caught nervously at his moustache. He saw Winch, one of the three Immering constables, advancing.

"What d'yer mean by it?" asked the constable. "Hullo! It's you, is it? The gent that broke the lamp at the Long Dragon!"

"I don't mean anything by it," said Mr. Fotheringay. "Nothing at all."

"What d'yer do it for then?"

"Oh, bother!" said Mr. Fotheringay.

"Bother indeed! D'yer know that stick hurt? What d'yer do it for, eh?"

For the moment Mr. Fotheringay could not think what he had done it for. His silence seemed to irritate Mr. Winch. "You've been assaulting the police, young man, this time. That's what *you* done."

"Look here, Mr. Winch," said Mr. Fotheringay, annoyed and confused, "I'm very sorry. The fact is—"

"Well?"

He could think of no way but the truth. "I was working a miracle." He tried to speak in an off-hand way, but try as he would he couldn't.

"Working a—! 'Ere, don't you talk rot. Working a miracle, indeed! Miracle! Well, that's downright funny! Why, you's the chap that don't believe in miracles. . . . Fact is, this is another of your silly conjuring tricks—that's what this is. Now, I tell you—"

But Mr. Fotheringay never heard what Mr. Winch was going to tell him. He realised he had given himself away, flung his valuable secret to all the winds of heaven. A violent gust of irritation swept him to action. He turned on the constable swiftly and fiercely. "Here," he said, "I've had enough of this, I have! I'll show you a silly conjuring trick, I will! Go to Hades! Go, now!"

He was alone!

Mr. Fotheringay performed no more miracles that night, nor did he trouble to see what had become of his flowering stick. He returned to the town, scared and very quiet, and went to his bedroom. "Lord!" he said, "it's a powerful gift—an extremely powerful gift. I didn't hardly mean as much as that. Not really. . . . I wonder what Hades is like!"

He sat on the bed taking off his boots. Struck by a happy thought he transferred the constable to San Francisco, and without any more interference with normal causation went soberly to bed. In the night he dreamt of the anger of Winch.

The next day Mr. Fotheringay heard two interesting items of news. Someone had planted a most beautiful climbing rose against the elder Mr. Gomshott's private house in the Lullaborough Road, and the river as far as Rawling's Mill was to be dragged for Constable Winch.

Mr. Fotheringay was abstracted and thoughtful all

that day, and performed no miracles except certain provisions for Winch, and the miracle of completing his day's work with punctual perfection in spite of all the bee-swarm of thoughts that hummed through his mind. And the extraordinary abstraction and meekness of his manner was remarked by several people, and made a matter for jesting. For the most part he was thinking of Winch.

On Sunday evening he went to chapel, and oddly enough, Mr. Maydig, who took a certain interest in occult matters, preached about "things that are not lawful." Mr. Fotheringay was not a regular chapel goer, but the system of assertive scepticism, to which I have already alluded, was now very much shaken. The tenor of the sermon threw an entirely new light on these novel gifts, and he suddenly decided to consult Mr. Maydig immediately after the service. So soon as that was determined, he found himself wondering why he had not done so before.

Mr. Maydig, a lean, excitable man with quite remarkably long wrists and neck, was gratified at a request for a private conversation from a young man whose carelessness in religious matters was a subject for general remark in the town. After a few necessary delays, he conducted him to the study of the Manse, which was contiguous to the chapel, seated him comfortably, and, standing in front of a cheerful fire—his legs threw a Rhodian arch of shadow on the opposite wall—requested Mr. Fotheringay to state his business.

At first Mr. Fotheringay was a little abashed, and found some difficulty in opening the matter. "You will scarcely believe me, Mr. Maydig, I am afraid"—and so forth for some time. He tried a question at last, and asked Mr. Maydig his opinion of miracles.

Mr. Maydig was still saying "Well" in an extremely judicial tone, when Mr. Fotheringay interrupted again: "You don't believe, I suppose, that some common sort of person—like myself, for instance—as it might be

sitting here now, might have some sort of twist inside him that made him able to do things by his will."

"It's possible," said Mr. Maydig. "Something of the sort, perhaps, is possible."

"If I might make free with something here, I think I might show you by a sort of experiment," said Mr. Fotheringay. "Now, take that tobacco-jar on the table, for instance. What I want to know is whether what I am going to do with it is a miracle or not. Just half a minute, Mr. Maydig, please."

He knitted his brows, pointed to the tobacco-jar and said: "Be a bowl of vi'lets."

The tobacco-jar did as it was ordered.

Mr. Maydig started violently at the change, and stood looking from the thaumaturgist to the bowl of flowers. He said nothing. Presently he ventured to lean over the table and smell the violets; they were fresh-picked and very fine ones. Then he stared at Mr. Fotheringay again.

"How did you do that?" he asked.

Mr. Fotheringay pulled his moustache. "Just told it—and there you are. Is that a miracle, or is it black art, or what is it? And what do you think's the matter with me? That's what I want to ask."

"It's a most extraordinary occurrence."

"And this day last week I knew no more that I could do things like that than you did. It came quite sudden. It's something odd about my will, I suppose, and that's as far as I can see."

"Is *that*—the only thing. Could you do other things besides that?"

"Lord, yes!" said Mr. Fotheringay. "Just anything." He thought, and suddenly recalled a conjuring entertainment he had seen. "Here!" He pointed. "Change into a bowl of fish—no, not that—change into a glass bowl full of water with goldfish swimming in it. That's better! You see that, Mr. Maydig?"

"It's astonishing. It's incredible. You are either a most extraordinary . . . But no—"

"I could change it into anything," said Mr. Fotheringay. "Just anything. Here! be a pigeon, will you?"

In another moment a blue pigeon was fluttering round the room and making Mr. Maydig duck every time it came near him. "Stop there, will you," said Mr. Fotheringay; and the pigeon hung motionless in the air. "I could change it back to a bowl of flowers," he said, and after replacing the pigeon on the table worked that miracle. "I expect you will want your pipe in a bit," he said, and restored the tobacco-jar.

Mr. Maydig had followed all these later changes in a sort of ejaculatory silence. He stared at Mr. Fotheringay and, in a very gingerly manner, picked up the tobacco-jar, examined it, replaced it on the table. "*Well!*" was the only expression of his feelings.

"Now, after that it's easier to explain what I came about," said Mr. Fotheringay; and proceeded to a lengthy and involved narrative of his strange experiences, beginning with the affair of the lamp in the Long Dragon and complicated by persistent allusions to Winch. As he went on, the transient pride Mr. Maydig's consternation had caused passed away; he became the very ordinary Mr. Fotheringay of everyday intercourse again. Mr. Maydig listened intently, the tobacco-jar in his hand, and his bearing changed also with the course of the narrative. Presently, while Mr. Fotheringay was dealing with the miracle of the third egg, the minister interrupted with a fluttering extended hand—

"It is possible," he said. "It is credible. It is amazing, of course, but it reconciles a number of difficulties. The power to work miracles is a gift—a peculiar quality like genius or second sight—hitherto it has come very rarely and to exceptional people. But in this case . . . I have always wondered at the miracles of

Mahomet, and at Yogi's miracles, and the miracles of Madame Blavatsky. But, of course! Yes, it is simply a gift! It carries out so beautifully the arguments of that great thinker"—Mr. Maydig's voice sank—"his Grace the Duke of Argyll. Here we plumb some profounder law—deeper than the ordinary laws of nature. Yes—yes. Go on. Go on!"

Mr. Fotheringay proceeded to tell of his misadventure with Winch, and Mr. Maydig, no longer overawed or scared, began to jerk his limbs about and interject astonishment. "It's this what troubled me most," proceeded Mr. Fotheringay; "it's this I'm most migitly in want of advice for; of course he's at San Francisco—wherever San Francisco may be—but of course it's awkward for both of us, as you'll see, Mr. Maydig. I don't see how he can understand what has happened, and I dare say he's scared and exasperated something tremendous, and trying to get at me. I dare say he keeps on starting off to come here. I send him back, by a miracle, every few hours, when I think of it. And of course, that's a thing he won't be able to understand, and it's bound to annoy him; and, of course, if he takes a ticket every time it will cost him a lot of money. I done the best I could for him, but of course it's difficult for him to put himself in my place. I thought afterwards that his clothes might have got scorched, you know—if Hades is all it's supposed to be—before I shifted him. In that case I suppose they'd have locked him up in San Francisco. Of course I willed him a new suit of clothes on him directly I thought of it. But, you see, I'm already in a deuce of a tangle—"

Mr. Maydig looked serious. "I see you are in a tangle. Yes, it's a difficult position. How you are to end it . . ." He became diffuse and inconclusive.

"However, we'll leave Winch for a little and discuss the larger question. I don't think this is a case of the black art or anything of the sort. I don't think there is any taint of criminality about it at all, Mr.

Fotheringay—none whatever, unless you are suppressing material facts. No, it's miracles—pure miracles—miracles, if I may say so, of the very highest class.”

He began to pace the hearthrug and gesticulate, while Mr. Fotheringay sat with his arm on the table and his head on his arm, looking worried. “I don't see how I'm to manage about Winch,” he said.

“A gift of working miracles—apparently a very powerful gift,” said Mr. Maydig, “will find a way about Winch—never fear. My dear Sir, you are a most important man—a man of the most astonishing possibilities. As evidence, for example! And in other ways, the things you may do . . .”

“Yes, *I've* thought of a thing or two,” said Mr. Fotheringay. “But—some of the things came a bit twisty. You saw that fish at first? Wrong sort of bowl and wrong sort of fish. And I thought I'd ask someone.”

“A proper course,” said Mr. Maydig, “a very proper course—altogether the proper course.” He stopped and looked at Mr. Fotheringay. “It's practically an unlimited gift. Let us test your powers, for instance. If they really *are* . . . If they really are all they seem to be.”

And so, incredible as it may seem, in the study of the little house behind the Congregational Chapel, on the evening of Sunday, Nov. 10, 1896, Mr. Fotheringay, egged on and inspired by Mr. Maydig, began to work miracles. The reader's attention is specially and definitely called to the date. He will object, probably has already objected, that certain points in this story are improbable, that if any things of the sort already described had indeed occurred, they would have been in all the papers a year ago. The details immediately following he will find particularly hard to accept, because among other things they involve the conclusion that he or she, the reader in question, must have been killed in a violent and unprecedented manner more

than a year ago. Now a miracle is nothing if not improbable, and as a matter of fact the reader *was* killed in a violent and unprecedented manner a year ago. In the subsequent course of this story that will become perfectly clear and credible, as every right-minded and reasonable reader will admit. But this is not the place for the end of the story, being but little beyond the hither side of the middle. And at first the miracles worked by Mr. Fotheringay were timid little miracles—little things with the cups and parlour fitments, as feeble as the miracles of Theosophists, and, feeble as they were, they were received with awe by his collaborator. He would have preferred to settle the Winch business out of hand, but Mr. Maydig would not let him. But after they had worked a dozen of these domestic trivialities, their sense of power grew, their imagination began to show signs of stimulation, and their ambition enlarged. Their first larger enterprise was due to hunger and the negligence of Mrs. Minchin, Mr. Maydig's housekeeper. The meal to which the minister conducted Mr. Fotheringay was certainly ill-laid and uninviting as refreshment for two industrious miracle-workers; but they were seated, and Mr. Maydig was descanting in sorrow rather than in anger upon his housekeeper's shortcomings, before it occurred to Mr. Fotheringay that an opportunity lay before him. "Don't you think, Mr. Maydig," he said, "if it isn't a liberty, I—"

"My dear Mr. Fotheringay! Of course! No—I didn't think."

Mr. Fotheringay waved his hand. "What shall we have?" he said, in a large, inclusive spirit, and, at Mr. Maydig's order, revised the supper very thoroughly. "As for me," he said, eyeing Mr. Maydig's selection, "I am always particularly fond of a tankard of stout and a nice Welsh rarebit, and I'll order that. I ain't much given to Burgundy," and forthwith stout and Welsh rarebit promptly appeared at his command.

They sat long at their supper, talking like equals, as Mr. Fotheringay presently perceived with a glow of surprise and gratification, of all the miracles they would presently do. "And, by the bye, Mr. Maydig," said Mr. Fotheringay, "I might perhaps be able to help you—in a domestic way."

"Don't quite follow," said Mr. Maydig, pouring out a glass of miraculous old Burgundy.

Mr. Fotheringay helped himself to a second Welsh rarebit out of vacancy, and took a mouthful. "I was thinking," he said, "I might be able (*chum, chum*) to work (*chum, chum*) a miracle with Mrs. Minchin (*chum, chum*)—make her a better woman."

Mr. Maydig put down the glass and looked doubtful. "She's— She strongly objects to interference, you know, Mr. Fotheringay. And—as a matter of fact—it's well past eleven and she's probably in bed and asleep. Do you think, on the whole—"

Mr. Fotheringay considered these objections. "I don't see that it shouldn't be done in her sleep."

For a time Mr. Maydig opposed the idea, and then he yielded. Mr. Fotheringay issued his orders, and a little less at their ease, perhaps, the two gentlemen proceeded with their repast. Mr. Maydig was enlarging on the changes he might expect in his housekeeper next day, with an optimism that seemed even to Mr. Fotheringay's supper senses a little forced and hectic, when a series of confused noises from upstairs began. Their eyes exchanged interrogations, and Mr. Maydig left the room hastily. Mr. Fotheringay heard him calling up to his housekeeper and then his footsteps going softly up to her.

In a minute or so the minister returned, his step light, his face radiant. "Wonderful!" he said, "and touching! Most touching!"

He began pacing the hearthrug. "A repentance—a most touching repentance—through the crack of the door. Poor woman! A most wonderful change! She

had got up. She must have got up at once. She had got up out of her sleep to smash a private bottle of brandy in her box. And to confess it too! . . . But this gives us—it opens—a most amazing vista of possibilities. If we can work this miraculous change in her . . .”

“The thing’s unlimited seemingly,” said Mr. Fotheringay. “And about Mr. Winch—”

“Altogether unlimited.” And from the hearthrug Mr. Maydig, waving the Winch difficulty aside, unfolded a series of wonderful proposals—proposals he invented as he went along.

Now what those proposals were does not concern the essentials of this story. Suffice it that they were designed in a spirit of infinite benevolence, the sort of benevolence that used to be called post-prandial. Suffice it, too, that the problem of Winch remained unsolved. Nor is it necessary to describe how far that series got to its fulfilment. There were astonishing changes. The small hours found Mr. Maydig and Mr. Fotheringay careering across the chilly market-square under the still moon, in a sort of ecstasy of thaumaturgy, Mr. Maydig all flap and gesture, Mr. Fotheringay short and bristling, and no longer abashed at his greatness. They had reformed every drunkard in the Parliamentary division, changed all the beer and alcohol to water (Mr. Maydig had overruled Mr. Fotheringay on this point), they had, further, greatly improved the railway communication of the place, drained Flinder’s swamp, improved the soil of One Tree Hill, and cured the Vicar’s wart. And they were going to see what could be done with the injured pier at South Bridge. “The place,” gasped Mr. Maydig, “won’t be the same place to-morrow. How surprised and thankful everyone will be!” And just at that moment the church clock struck three.

“I say,” said Mr. Fotheringay, “that’s three o’clock! I must be getting back. I’ve got to be at business by eight. And besides, Mrs. Wimms—”

"We're only beginning," said Mr. Maydig, full of the sweetness of unlimited power. "We're only beginning. Think of all the good we're doing. When people wake—"

"But—," said Mr. Fotheringay.

Mr. Maydig gripped his arm suddenly. His eyes were bright and wild. "My dear chap," he said, "there's no hurry. Look"—he pointed to the moon at the zenith—"Joshua!"

"Joshua?" said Mr. Fotheringay.

"Joshua," said Mr. Maydig. "Why not? Stop it."

Mr. Fotheringay looked at the moon.

"That's a bit tall," he said after a pause.

"Why not?" said Mr. Maydig. "Of course it doesn't stop. You stop the rotation of the earth, you know. Time stops. It isn't as if we were doing harm."

"H'm!" said Mr. Fotheringay. "Well." He sighed. "I'll try. Here—"

He buttoned up his jacket and addressed himself to the habitable globe, with as good an assumption of confidence as lay in his power. "Jest stop rotating, will you," said Mr. Fotheringay.

Incontinently he was flying head over heels through the air at the rate of dozens of miles a minute. In spite of the innumerable circles he was describing per second, he thought; for thought is wonderful—sometimes as sluggish as flowing pitch, sometimes as instantaneous as light. He thought in a second, and willed. "Let me come down safe and sound. Whatever else happens, let me down safe and sound."

He willed it only just in time, for his clothes, heated by his rapid flight through the air, were already beginning to singe. He came down with a forcible, but by no means injurious bump in what appeared to be a mound of fresh-turned earth. A large mass of metal and masonry, extraordinarily like the clock-tower in the

middle of the market-square, hit the earth near him, ricocheted over him, and flew into stonework, bricks, and masonry, like a bursting bomb. A hurtling cow hit one of the larger blocks and smashed like an egg. There was a crash that made all the most violent crashes of his past life seem like the sound of falling dust, and this was followed by a descending series of lesser crashes. A vast wind roared throughout earth and heaven, so that he could scarcely lift his head to look. For a while he was too breathless and astonished even to see where he was or what had happened. And his first movement was to feel his head and reassure himself that his streaming hair was still his own.

"Lord!" gasped Mr. Fotheringay, scarce able to speak for the gale, "I've had a squeak! What's gone wrong? Storms and thunder. And only a minute ago a fine night. It's Maydig set me on to this sort of thing. *What* a wind! If I go on fooling in this way I'm bound to have a thundering accident! . . .

"Where's Maydig?"

"What a confounded mess everything's in!"

He looked about him so far as his flapping jacket would permit. The appearance of things was really extremely strange. "The sky's all right anyhow," said Mr. Fotheringay. "And that's about all that is all right. And even there it looks like a terrific gale coming up. But there's the moon overhead. Just as it was just now. Bright as midday. But as for the rest— Where's the village? Where's—where's anything? And what on earth set this wind a-blowing? I didn't order no wind."

Mr. Fotheringay struggled to get to his feet in vain, and after one failure, remained on all fours, holding on. He surveyed the moonlit world to leeward, with the tails of his jacket streaming over his head. "There's something seriously wrong," said Mr. Fotheringay. "And what it is—goodness knows."

Far and wide nothing was visible in the white glare

through the haze of dust that drove before a screaming gale but tumbled masses of earth and heaps of inchoate ruins, no trees, no houses, no familiar shapes, only a wilderness of disorder vanishing at last into the darkness beneath the whirling columns and streamers, the lightnings and thunderings of a swiftly rising storm. Near him in the livid glare was something that might once have been an elm-tree, a smashed mass of splinters, shivered from boughs to base, and further a twisted mass of iron girders—only too evidently the viaduct—rose out of the piled confusion.

You see, when Mr. Fotheringay had arrested the rotation of the solid globe, he had made no stipulation concerning the trifling movables upon its surface. And the earth spins so fast that the surface at its equator is travelling at rather more than a thousand miles an hour, and in these latitudes at more than half that pace. So that the village, and Mr. Maydig, and Mr. Fotheringay, and everybody and everything had been jerked violently forward at about nine miles per second—that is to say, much more violently than if they had been fired out of a cannon. And every human being, every living creature, every house, and every tree—all the world as we know it—had been so jerked and smashed and utterly destroyed. That was all.

These things Mr. Fotheringay did not, of course, fully appreciate. But he perceived that his miracle had miscarried, and with that a great disgust of miracles came upon him. He was in darkness now, for the clouds had swept together and blotted out his momentary glimpse of the moon, and the air was full of fitful struggling tortured wraiths of hail. A great roaring of wind and waters filled earth and sky, and, peering under his hand through the dust and sleet to windward, he saw by the play of the lightnings a vast wall of water pouring towards him.

“Maydig!” screamed Mr. Fotheringay’s feeble voice amid the elemental uproar. “Here!—Maydig!”

"Stop!" cried Mr. Fotheringay to the advancing water. "Oh, for goodness' sake, stop!"

"Just a moment," said Mr. Fotheringay to the lightnings and thunder. "Stop jest a moment while I collect my thoughts. . . . And now what shall I do?" he said. "What *shall* I do? Lord! I wish Maydig was about."

"I know," said Mr. Fotheringay. "And for goodness' sake let's have it right *this* time."

He remained on all fours, leaning against the wind, very intent to have everything right.

"Ah!" he said. "Let nothing what I'm going to order happen until I say 'Off!' . . . Lord! I wish I'd thought of that before!"

He lifted his little voice against the whirlwind, shouting louder and louder in the vain desire to hear himself speak. "Now then!—here goes! Mind about that what I said just now. In the first place, when all I've got to say is done, let me lose my miraculous power, let my will become just like anybody else's will, and all these dangerous miracles be stopped. I don't like them. I'd rather I didn't work 'em. Ever so much. That's the first thing. And the second is—let me be back just before the miracles begin; let everything be just as it was before that blessed lamp turned up. It's a big job, but it's the last. Have you got it? No more miracles, everything as it was—me back in the Long Dragon just before I drank my half-pint. That's it! Yes."

He dug his fingers into the mould, closed his eyes, and said "Off!"

Everything became perfectly still. He perceived that he was standing erect.

"So *you* say," said a voice.

He opened his eyes. He was in the bar of the Long Dragon, arguing about miracles with Toddy Beamish. He had a vague sense of some great thing forgotten that instantaneously passed. You see, except for the loss of

his miraculous powers, everything was back as it had been; his mind and memory therefore were now just as they had been at the time when this story began. So that he knew absolutely nothing of all that is told here, knows nothing of all that is told here to this day. And among other things, of course, he still did not believe in miracles.

"I tell you that miracles, properly speaking, can't possibly happen," he said, "whatever you like to hold. And I'm prepared to prove it up to the hilt."

"That's what *you* think," said Toddy Beamish, and "Prove it if you can."

"Looky here, Mr. Beamish," said Mr. Fotheringay. "Let us clearly understand what a miracle is. It's something contrariwise to the course of nature done by power of Will. . . ."

TWELVE STORIES AND A DREAM

STORY THE FIRST

In such the history of flying was the work of thousands of men—our time's support is not that of experiment, until at last came the shining machine. You may think to find the work that the scientific invention of the popular mind has devised that of an hour's thought, and that a man will never live should be chosen as the inventor, but it is not chosen to invent. What is the mastery of science and the mastery of the man-machine. And only of it required work, and it is possible and possible to be done in your future, the best invention of the world which the engineers have made. It would be many years and a little longer, but in many generations, the idea was proved, the machine was made, the plane was made and worked, and without any doubt the of human life and happiness. There is no denying wonder of the influence of the invention that is the first of the progress of the world's history, and the making of the world. Many generations have lived.

STORY THE FIRST

Filmer

IN truth the mastery of flying was the work of thousands of men—this man a suggestion and that an experiment, until at last only one vigorous intellectual effort was needed to finish the work. But the inexorable injustice of the popular mind has decided that of all these thousands, one man, and that a man who never flew, should be chosen as the discoverer, just as it has chosen to honour Watt as the discoverer of steam and Stephenson of the steam-engine. And surely of all honoured names none is so grotesquely and tragically honoured as poor Filmer's, the timid, intellectual creature who solved the problem over which the world had hung perplexed and a little fearful for so many generations, the man who pressed the button that has changed peace and warfare and wellnigh every condition of human life and happiness. Never has that recurring wonder of the littleness of the scientific man in the face of the greatness of his science found such an amazing exemplification. Much concerning Filmer is,

and must remain, profoundly obscure—Filmers attract no Boswells—but the essential facts and the concluding scene are clear enough, and there are letters, and notes, and casual allusions to piece the whole together. And this is the story one makes, putting this thing with that, of Filmer's life and death.

The first authentic trace of Filmer on the page of history is a document in which he applies for admission as a paid student in physics to the Government laboratories at South Kensington, and therein he describes himself as the son of a "military bootmaker" ("cobler" in the vulgar tongue) of Dover, and lists his various examination proofs of a high proficiency in chemistry and mathematics. With a certain want of dignity he seeks to enhance these attainments by a profession of poverty and disadvantages, and he writes of the laboratory as the "gaol" of his ambitions, a slip which reinforces his claim to have devoted himself exclusively to the exact sciences. The document is endorsed in a manner that shows Filmer was admitted to this coveted opportunity; but until quite recently no traces of his success in the Government institution could be found.

It has now, however, been shown that in spite of his professed zeal for research, Filmer, before he had held this scholarship a year, was tempted by the possibility of a small increase in his immediate income, to abandon it in order to become one of the nine-pence-an-hour computers employed by a well-known Professor in his vicarious conduct of those extensive researches of his in solar physics—researches which are still a matter of perplexity to astronomers. Afterwards, for the space of seven years, save for the pass lists of the London University, in which he is seen to climb slowly to a double first-class B.Sc., in mathematics and chemistry, there is no evidence of how Filmer passed his life. No one knows how or where he lived, though it seems highly probable that he continued to support himself by teach-

ing while he prosecuted the studies necessary for this distinction. And then, oddly enough, one finds him mentioned in the correspondence of Arthur Hicks, the poet.

"You remember Filmer," Hicks writes to his friend Vance; "well *he* hasn't altered a bit, the same hostile mumble and the nasty chin—how *can* a man contrive to be always three days from shaving?—and a sort of furtive air of being engaged in sneaking in front of one; even his coat and that frayed collar of his show no further signs of the passing of years. He was writing in the library and I sat down beside him in the name of God's charity, whereupon he deliberately insulted me by covering up his memoranda. It seems he has some brilliant research on hand that he suspects me of all people—with a Bodley Booklet a-printing!—of stealing. He has taken remarkable honours at the University—he went through them with a sort of hasty slobber, as though he feared I might interrupt him before he had told me all—and he spoke of taking his D.Sc. as one might speak of taking a cab. And he asked what I was doing—with a sort of comparative accent, and his arm was spread nervously, positively a protecting arm, over the paper that hid the precious idea—his one hopeful idea.

"'Poetry,' he said, 'poetry. And what do you profess to teach in it, Hicks?'

"The thing's a provincial professorling in the very act of budding, and I thank the Lord devoutly that but for the precious gift of indolence I also might have gone this way to D.Sc. and destruction . . ."

A curious little vignette that I am inclined to think caught Filmer in or near the very birth of his discovery.

Hicks was wrong in anticipating a provincial professorship for Filmer. Our next glimpse of him is lecturing on "rubber and rubber substitutes," to the Society of Arts—he had become manager to a great plastic-substance manufactory—and at that time, it is now

known, he was a member of the Aeronautical Society, albeit he contributed nothing to the discussions of that body, preferring no doubt to mature his great conception without external assistance. And within two years of that paper before the Society of Arts he was hastily taking out a number of patents and proclaiming in various undignified ways the completion of the divergent inquiries which made his flying machine possible. The first definite statement to that effect appeared in a half-penny evening paper through the agency of a man who lodged in the same house with Filmer. His final haste after his long laborious secret patience seems to have been due to a needless panic, Bootle, the notorious American scientific quack, having made an announcement that Filmer interpreted wrongly as an anticipation of his idea.

Now what precisely was Filmer's idea? Really a very simple one. Before his time the pursuit of aeronautics had taken two divergent lines, and had developed on the one hand balloons—large apparatus lighter than air, easy in ascent, and comparatively safe in descent, but floating helplessly before any breeze that took them; and on the other, flying machines that flew only in theory—vast flat structures heavier than air, propelled and kept up by heavy engines and for the most part smashing at the first descent. But, neglecting the fact that the inevitable final collapse rendered them impossible, the weight of the flying machines gave them this theoretical advantage, that they could go through the air against a wind, a necessary condition if aerial navigation was to have any practical value. It is Filmer's particular merit that he perceived the way in which the contrasted and hitherto incompatible merits of balloon and heavy flying machine might be combined in one apparatus, which should be at choice either heavier or lighter than air. He took hints from the contractile bladders of fish and the pneumatic cavities of birds. He devised an arrangement of contractile and absolutely

closed balloons which when expanded could lift the actual flying apparatus with ease, and when retracted by the complicated "musculature" he wove about them, were withdrawn almost completely into the frame; and he built the large framework which these balloons sustained, of hollow, rigid tubes, the air in which, by an ingenious contrivance, was automatically pumped out as the apparatus fell, and which then remained exhausted so long as the aeronaut desired. There were no wings or propellers to his machine, such as there had been to all previous aeroplanes, and the only engine required was the compact and powerful little appliance needed to contract the balloons. He perceived that such an apparatus as he had devised might rise with frame exhausted and balloons expanded to a considerable height, might then contract its balloons and let the air into its frame, and by an adjustment of its weights slide down the air in any desired direction. As it fell it would accumulate velocity and at the same time lose weight, and the momentum accumulated by its down-rush could be utilised by means of a shifting of its weights to drive it up in the air again as the balloons expanded. This conception, which is still the structural conception of all successful flying machines, needed, however, a vast amount of toil upon its details before it could actually be realised, and such toil Filmer—as he was accustomed to tell the numerous interviewers who crowded upon him in the heyday of his fame—"ungrudgingly and unsparingly gave." His particular difficulty was the elastic lining of the contractile balloon. He found he needed a new substance, and in the discovery and manufacture of that new substance he had, as he never failed to impress upon the interviewers, "performed a far more arduous work than even in the actual achievement of my seemingly greater discovery."

But it must not be imagined that these interviews followed hard upon Filmer's proclamation of his invention. An interval of nearly five years elapsed during

which he timidly remained at his rubber factory—he seems to have been entirely dependent on his small income from this source—making misdirected attempts to assure a quite indifferent public that he really *had* invented what he had invented. He occupied the greater part of his leisure in the composition of letters to the scientific and daily press, and so forth, stating precisely the net result of his contrivances, and demanding financial aid. That alone would have sufficed for the suppression of his letters. He spent such holidays as he could arrange in unsatisfactory interviews with the door-keepers of leading London papers—he was singularly not adapted for inspiring hall-porters with confidence—and he positively attempted to induce the War Office to take up his work with him. There remains a confidential letter from Major-General Volleyfire to the Earl of Frogs. “The man’s a crank and a bounder to boot,” says the Major-General in his bluff, sensible, army way, and so left it open for the Japanese to secure, as they subsequently did, the priority in this side of warfare—a priority they still to our great discomfort retain.

And then by a stroke of luck the membrane Filmer had invented for his contractile balloon was discovered to be useful for the valves of a new oil-engine, and he obtained the means for making a trial model of his invention. He threw up his rubber factory appointment, desisted from all further writing, and, with a certain secrecy that seems to have been an inseparable characteristic of all his proceedings, set to work upon the apparatus. He seems to have directed the making of its parts and collected most of it in a room in Shore-ditch, but its final putting together was done at Dymchurch, in Kent. He did not make the affair large enough to carry a man, but he made an extremely ingenious use of what were then called the Marconi rays to control its flight. The first flight of this first practicable flying machine took place over some fields

near Burford Bridge, near Hythe, in Kent, and Filmer followed and controlled its flight upon a specially constructed motor tricycle.

The flight was, considering all things, an amazing success. The apparatus was brought in a cart from Dymchurch to Burford Bridge, ascended there to a height of nearly three hundred feet, swooped thence very nearly back to Dymchurch, came about in its sweep, rose again, circled, and finally sank uninjured in a field behind the Burford Bridge Inn. At its descent a curious thing happened. Filmer got off his tricycle, scrambled over the intervening dyke, advanced perhaps twenty yards towards his triumph, threw out his arms in a strange gesticulation, and fell down in a dead faint. Everyone could then recall the ghastliness of his features and all the evidences of extreme excitement they had observed throughout the trial, things they might otherwise have forgotten. Afterwards in the inn he had an unaccountable gust of hysterical weeping.

Altogether there were not twenty witnesses of this affair, and those for the most part uneducated men. The New Romney doctor saw the ascent but not the descent, his horse being frightened by the electrical apparatus on Filmer's tricycle and giving him a nasty spill. Two members of the Kent constabulary watched the affair from a cart in an unofficial spirit, and a grocer calling round the Marsh for orders and two lady cyclists seem almost to complete the list of educated people. There were two reporters present, one representing a Folkestone paper and the other being a fourth-class interviewer and "symposium" journalist, whose expenses down, Filmer, anxious as ever for adequate advertisement—and now quite realising the way in which adequate advertisement may be obtained—had paid. The latter was one of those writers who can throw a convincing air of unreality over the most credible events, and his half-facetious account of the affair appeared in the magazine page of a popular journal. But, happily

for Filmer, this person's colloquial methods were more convincing. He went to offer some further screed upon the subject to Banghurst, the proprietor of the *New Paper*, and one of the ablest and most unscrupulous men in London journalism, and Banghurst instantly seized upon the situation. The interviewer vanishes from the narrative, no doubt very doubtfully remunerated, and Banghurst, Banghurst himself, double chin, grey twill suit, abdomen, voice, gestures and all, appears at Dymchurch, following his large, unrivalled journalistic nose. He had seen the whole thing at a glance, just what it was and what it might be.

At his touch, as it were, Filmer's long-pent investigations exploded into fame. He instantly and most magnificently was a Boom. One turns over the files of the journals of the year 1907 with a quite incredulous recognition of how swift and flaming the boom of those days could be. The July papers know nothing of flying, see nothing in flying, state by a most effective silence that men never would, could, or should fly. In August flying and Filmer and flying and parachutes and aerial tactics and the Japanese Government and Filmer and again flying, shouldered the war in Yunnan and the gold mines of Upper Greenland off the leading page. And Banghurst had given ten thousand pounds, and, further, Banghurst was giving five thousand pounds, and Banghurst had devoted his well-known, magnificent (but hitherto sterile) private laboratories and several acres of land near his private residence on the Surrey hills to the strenuous and violent completion—Banghurst fashion—of the life-size practicable flying machine. Meanwhile, in the sight of privileged multitudes in the walled-garden of the Banghurst town residence in Fulham, Filmer was exhibited at weekly garden parties putting the working model through its paces. At enormous initial cost, but with a final profit, the *New Paper* presented its readers with a beautiful photographic souvenir of the first of these occasions.

Here again the correspondence of Arthur Hicks and his friend Vance comes to our aid.

"I saw Filmer in his glory," he writes, with just the touch of envy natural to his position as a poet *passé*. "The man is brushed and shaved, dressed in the fashion of a Royal-Institution-Afternoon Lecturer, the very newest shape in frock-coats and long patent shoes, and altogether in a state of extraordinary streakiness between an owlish great man and a scared abashed self-conscious bounder cruelly exposed. He hasn't a touch of colour in the skin of his face, his head juts forward, and those queer little dark amber eyes of his watch furtively round him for his fame. His clothes fit perfectly and yet sit upon him as though he had bought them ready-made. He speaks in a mumble still, but he says, you perceive indistinctly, enormous self-assertive things, he backs into the rear of groups by instinct if Banghurst drops the line for a minute, and when he walks across Banghurst's lawn one perceives him a little out of breath and going jerky, and that his weak white hands are clenched. His is a state of tension—horrible tension. And he is the Greatest Discoverer of This or Any Age—the Greatest Discoverer of This or Any Age! What strikes one so forcibly about him is that he didn't somehow quite expect it ever, at any rate, not at all like this. Banghurst is about everywhere, the energetic M.C. of his great little catch, and I swear he will have everyone down on his lawn there before he has finished with the engine; he had bagged the prime minister yesterday, and he, bless his heart! didn't look particularly outsize, on the very first occasion. Conceive it! Filmer! Our obscure unwashed Filmer, the Glory of British science! Duchesses crowd upon him, beautiful, bold peeresses say in their beautiful, clear loud voices—have you noticed how penetrating the great lady is becoming nowadays? —'Oh, Mr. Filmer, how *did* you do it?'

"Common men on the edge of things are too remote for the answer. One imagines something in the way of

that interview, 'toil ungrudgingly and unsparingly given, Madam, and, perhaps—I don't know—but perhaps a little special aptitude.'”

So far Hicks, and the photographic supplement to the *New Paper* is in sufficient harmony with the description. In one picture the machine swings down towards the river, and the tower of Fulham church appears below it through a gap in the elms, and in another, Filmer sits at his guiding batteries, and the great and beautiful of the earth stand around him, with Banghurst massed modestly but resolutely in the rear. The grouping is oddly apposite. Occluding much of Banghurst, and looking with a pensive, speculative expression at Filmer, stands the Lady Mary Elkinghorn, still beautiful, in spite of the breath of scandal and her eight-and-thirty years, the only person whose face does not admit a perception of the camera that was in the act of snapping them all.

So much for the exterior facts of the story, but, after all, they are very exterior facts. About the real interest of the business one is necessarily very much in the dark. How was Filmer feeling at the time? How much was a certain unpleasant anticipation present inside that very new and fashionable frock-coat? He was in the halfpenny, penny, sixpenny, and more expensive papers alike, and acknowledged by the whole world as “the Greatest Discoverer of This or Any Age.” He had invented a practicable flying machine, and every day down among the Surrey hills the life-sized model was getting ready. And when it was ready, it followed as a clear inevitable consequence of his having invented and made it—everybody in the world, indeed, seemed to take it for granted; there wasn't a gap anywhere in that serried front of anticipation—that he would proudly and cheerfully get aboard it, ascend with it, and fly.

But we know now pretty clearly that simple pride and cheerfulness in such an act were singularly out of harmony with Filmer's private constitution. It occurred

to no one at the time, but there the fact is. We can guess with some confidence now that it must have been drifting about in his mind a great deal during the day, and, from a little note to his physician complaining of persistent insomnia, we have the soundest reason for supposing it dominated his nights—the idea that it would be after all, in spite of his theoretical security, an abominably sickening, uncomfortable, and dangerous thing for him to flap about in nothingness a thousand feet or so in the air. It must have dawned upon him quite early in the period of being the Greatest Discoverer of This or Any Age, the vision of doing this and that with an extensive void below. Perhaps somewhere in his youth he had looked down a great height or fallen down in some excessively uncomfortable way; perhaps some habit of sleeping on the wrong side had resulted in that disagreeable falling nightmare one knows, and given him his horror; of the strength of that horror there remains now not a particle of doubt.

Apparently he had never weighed this duty of flying in his earlier days of research; the machine had been his end, but now things were opening out beyond his end, and particularly this giddy whirl up above there. He was a Discoverer and he had Discovered. But he was not a Flying Man, and it was only now that he was beginning to perceive clearly that he was expected to fly. Yet, however much the thing was present in his mind he gave no expression to it until the very end, and meanwhile he went to and fro from Banghurst's magnificent laboratories, and was interviewed and lionised, and wore good clothes, and ate good food, and lived in an elegant flat, enjoying a very abundant feast of such good, coarse, wholesome Fame and Success as a man, starved for all his years as he had been starved, might be reasonably expected to enjoy.

After a time, the weekly gatherings in Fulham ceased. The model had failed one day just for a moment to respond to Filmer's guidance, or he had been distracted

by the compliments of an archbishop. At any rate, it suddenly dug its nose into the air just a little too steeply as the archbishop was sailing through a Latin quotation for all the world like an archbishop in a book, and it came down in the Fulham Road within three yards of a 'bus horse. It stood for a second perhaps, astonishing and in its attitude astonished, then it crumpled, shivered into pieces, and the 'bus horse was incidentally killed.

Filmer lost the end of the archiepiscopal compliment. He stood up and stared as his invention swooped out of sight and reach of him. His long, white hands still gripped his useless apparatus. The archbishop followed his skyward stare with an apprehension unbecoming in an archbishop.

Then came the crash and the shouts and uproar from the road to relieve Filmer's tension. "My God!" he whispered, and sat down.

Everyone else almost was staring to see where the machine had vanished, or rushing into the house.

The making of the big machine progressed all the more rapidly for this. Over its making presided Filmer, always a little slow and very careful in his manner, always with a growing preoccupation in his mind. His care over the strength and soundness of the apparatus was prodigious. The slightest doubt, and he delayed everything until the doubtful part could be replaced. Wilkinson, his senior assistant, fumed at some of these delays, which, he insisted, were for the most part unnecessary. Banghurst magnified the patient certitude of Filmer in the *New Paper*, and reviled it bitterly to his wife, and MacAndrew, the second assistant, approved Filmer's wisdom. "We're not wanting a *fiasco*, man," said MacAndrew. "He's perfectly well advised."

And whenever an opportunity arose Filmer would expound to Wilkinson and MacAndrew just exactly how every part of the flying machine was to be controlled and worked, so that in effect they would be just as

capable, and even more capable, when at last the time came, of guiding it through the skies.

Now I should imagine that if Filmer had seen fit at this stage to define just what he was feeling, and to take a definite line in the matter of his ascent, he might have escaped that painful ordeal quite easily. If he had had it clearly in his mind he could have done endless things. He would surely have found no difficulty with a specialist to demonstrate a weak heart, or something gastric or pulmonary, to stand in his way—that is the line I am astonished he did not take—or he might, had he been man enough, have declared simply and finally that he did not intend to do the thing. But the fact is, though the dread was hugely present in his mind, the thing was by no means sharp and clear. I fancy that all through this period he kept telling himself that when the occasion came he would find himself equal to it. He was like a man just gripped by a great illness, who says he feels a little out of sorts, and expects to be better presently. Meanwhile he delayed the completion of the machine, and let the assumption that he was going to fly it take root and flourish exceedingly about him. He even accepted anticipatory compliments on his courage. And, barring this secret squeamishness, there can be no doubt he found all the praise and distinction and fuss he got a delightful and even intoxicating draught.

The Lady Mary Elkinghorn made things a little more complicated for him.

How *that* began was a subject of inexhaustible speculation to Hicks. Probably in the beginning she was just a little "nice" to him with that impartial partiality of hers, and it may be that to her eyes, standing out conspicuously as he did ruling his monster in the upper air, he had a distinction that Hicks was not disposed to find. And somehow they must have had a moment of sufficient isolation, and the great Discoverer a moment of sufficient courage for something just a little personal

to be mumbled or blurted. However it began, there is no doubt that it did begin, and presently became quite perceptible to a world accustomed to find in the proceedings of the Lady Mary Elkinghorn a matter of entertainment. It complicated things, because the state of love in such a virgin mind as Filmer's would brace his resolution, if not sufficiently, at any rate considerably, towards facing a danger he feared, and hampered him in such attempts at evasion as would otherwise be natural and congenial.

It remains a matter for speculation just how the Lady Mary felt for Filmer and just what she thought of him. At thirty-eight one may have gathered much wisdom and still be not altogether wise, and the imagination still functions actively enough in creating glammers and effecting the impossible. He came before her eyes as a very central man, and that always counts, and he had powers, unique powers as it seemed, at any rate in the air. The performance with the model had just a touch of the quality of a potent incantation, and women have ever displayed an unreasonable disposition to imagine that when a man has powers he must necessarily have Power. Given so much, and what was not good in Filmer's manner and appearance became an added merit. He was modest, he hated display, but given an occasion where *true* qualities are needed, then—then one would see!

The late Mrs. Bampton thought it wise to convey to Lady Mary her opinion that Filmer, all things considered, was rather a "grub." "He's certainly not a sort of man I have ever met before," said the Lady Mary, with a quite unruffled serenity. And Mrs. Bampton, after a swift, imperceptible glance at that serenity, decided that so far as saying anything to Lady Mary went, she had done as much as could be expected of her. But she said a great deal to other people.

And at last, without any undue haste or unseemliness, the day dawned, the great day, when Banghurst had

promised his public—the world in fact—that flying should be finally attained and overcome. Filmer saw it dawn, watched even in the darkness before it dawned, watched its stars fade and the grey and pearly pinks give place at last to the clear blue sky of a sunny, cloudless day. He watched it from the window of his bedroom in the new-built wing of Banghurst's Tudor house. And as the stars were overwhelmed and the shapes and substances of things grew into being out of the amorphous dark, he must have seen more and more distinctly the festive preparations beyond the beech clumps near the green pavilion in the outer park, the three stands for the privileged spectators, the raw, new fencing of the enclosure, the sheds and workshops, the Venetian masts and fluttering flags that Banghurst had considered essential, black and limp in the breezeless dawn, and amidst all these things a great shape covered with tarpauling. A strange and terrible portent for humanity was that shape, a beginning that must surely spread and widen and change and dominate all the affairs of men, but to Filmer it is very doubtful whether it appeared in anything but a narrow and personal light. Several people heard him pacing in the small hours—for the vast place was packed with guests by a proprietor editor who, before all things, understood compression. And about five o'clock, if not before, Filmer left his room and wandered out of the sleeping house into the park, alive by that time with sunlight and birds and squirrels and the fallow deer. MacAndrew, who was also an early riser, met him near the machine, and they went and had a look at it together.

It is doubtful if Filmer took any breakfast, in spite of the urgency of Banghurst. So soon as the guests began to be about in some number he seems to have retreated to his room. Thence about ten he went into the shrubbery, very probably because he had seen the Lady Mary Elkinghorn there. She was walking up and down, engaged in conversation with her old school

friend, Mrs. Brewis-Craven, and although Filmer had never met the latter lady before, he joined them and walked beside them for some time. There were several silences in spite of the Lady Mary's brilliance. The situation was a difficult one, and Mrs. Brewis-Craven did not master its difficulty. "He struck me," she said afterwards with a luminous self-contradiction, "as a very unhappy person who had something to say, and wanted before all things to be helped to say it. But how was one to help him when one didn't know what it was?"

At half-past eleven the enclosures for the public in the outer park were crammed, there was an intermittent stream of equipages along the belt which circles the outer park, and the house party was dotted over the lawn and shrubbery and the corner of the inner park, in a series of brilliantly attired knots, all making for the flying machine. Filmer walked in a group of three with Banghurst, who was supremely and conspicuously happy, and Sir Theodore Hickle, the president of the Aeronautical Society. Mrs. Banghurst was close behind with the Lady Mary Elkinghorn, Georgina Hickle, and the Dean of Stays. Banghurst was large and copious in speech, and such interstices as he left were filled in by Hickle with complimentary remarks to Filmer. And Filmer walked between them saying not a word except by way of unavoidable reply. Behind, Mrs. Banghurst listened to the admirably suitable and shapely conversation of the Dean with that fluttered attention to the ampler clergy ten years of social ascent and ascendancy had not cured in her; and the Lady Mary watched, no doubt with an entire confidence in the world's disillusionment, the drooping shoulders of the sort of man she had never met before.

There was some cheering as the central party came into view of the enclosures, but it was not very unanimous nor invigorating cheering. They were within fifty yards of the apparatus when Filmer took a hasty glance over his shoulder to measure the distance of the

ladies behind them, and decided to make the first remark he had initiated since the house had been left. His voice was just a little hoarse, and he cut in on Banghurst in mid-sentence on Progress.

"I say, Banghurst," he said, and stopped.

"Yes," said Banghurst.

"I wish——" He moistened his lips. "I'm not feeling well."

Banghurst stopped dead. "Eh?" he shouted.

"A queer feeling." Filmer made to move on, but Banghurst was immovable. "I don't know. I may be better in a minute. If not—perhaps. . . . MacAndrew——"

"You're not feeling *well*?" said Banghurst, and stared at his white face.

"My dear!" he said, as Mrs. Banghurst came up with them, "Filmer says he isn't feeling *well*."

"A little queer," exclaimed Filmer, avoiding the Lady Mary's eyes. "It may pass off——"

There was a pause.

It came to Filmer that he was the most isolated person in the world.

"In any case," said Banghurst, "the ascent must be made. Perhaps if you were to sit down somewhere for a moment——"

"It's the crowd, I think," said Filmer.

There was a second pause. Banghurst's eye rested in scrutiny on Filmer, and then swept the sample of public in the enclosure.

"It's unfortunate," said Sir Theodore Hickle; "but still—I suppose—— Your assistants—— Of course, if you feel out of condition and disinclined——"

"I don't think Mr. Filmer would permit *that* for a moment," said the Lady Mary.

"But if Mr. Filmer's nerve is run—— It might even be dangerous for him to attempt——" Hickle coughed.

"It's just because it's dangerous," began the Lady

Mary, and felt she had made her point of view and Filmer's plain enough.

Conflicting motives struggled for Filmer.

"I feel I ought to go up," he said, regarding the ground. He looked up and met the Lady Mary's eyes. "I want to go up," he said, and smiled whitely at her. He turned towards Banghurst. "If I could just sit down somewhere for a moment out of the crowd and sun——"

Banghurst, at least, was beginning to understand the case. "Come into my little room in the green pavilion," he said. "It's quite cool there." He took Filmer by the arm.

Filmer turned his face to the Lady Mary Elkinghorn again. "I shall be all right in five minutes," he said. "I'm tremendously sorry——"

The Lady Mary Elkinghorn smiled at him. "I couldn't think," he said to Hickle, and obeyed the compulsion of Banghurst's pull.

The rest remained watching the two recede.

"He is so fragile," said the Lady Mary.

"He's certainly a highly nervous type," said the Dean, whose weakness it was to regard the whole world, except married clergymen with enormous families, as "neurotic."

"Of course," said Hickle, "it isn't absolutely necessary for him to go up because he has invented——"

"How *could* he avoid it?" asked the Lady Mary, with the faintest shadow of scorn.

"It's certainly most unfortunate if he's going to be ill now," said Mrs. Banghurst a little severely.

"He's not going to be ill," said the Lady Mary, and certainly she had met Filmer's eye.

"*You'll* be all right," said Banghurst, as they went towards the pavilion. "All you want is a nip of brandy. It ought to be you, you know. *You'll* be—you'd get it rough, you know, if you let another man——"

"Oh, I want to go," said Filmer. "I shall be all

right. As a matter of fact I'm almost inclined *now*—
No! I think I'll have that nip of brandy first."

Banghurst took him into the little room and routed out an empty decanter. He departed in search of a supply. He was gone perhaps five minutes.

The history of those five minutes cannot be written. At intervals Filmer's face could be seen by the people on the easternmost of the stands erected for spectators, against the window pane peering out, and then it would recede and fade. Banghurst vanished shouting behind the grand stand, and presently the butler appeared going pavilionward with a tray.

The apartment in which Filmer came to his last solution was a pleasant little room very simply furnished with green furniture and an old bureau—for Banghurst was simple in all his private ways. It was hung with little engravings after Morland and it had a shelf of books. But as it happened, Banghurst had left a rook rifle he sometimes played with on the top of the desk, and on the corner of the mantelshelf was a tin with three or four cartridges remaining in it. As Filmer went up and down that room wrestling with his intolerable dilemma he went first towards the neat little rifle athwart the blotting-pad and then towards the neat little red label

“.22 LONG.”

The thing must have jumped into his mind in a moment.

Nobody seems to have connected the report with him, though the gun, being fired in a confined space, must have sounded loud, and there were several people in the billiard-room, separated from him only by a lath-and-plaster partition. But directly Banghurst's butler opened the door and smelt the sour smell of the smoke, he knew, he says, what had happened. For the servants at least of Banghurst's household had guessed something of what was going on in Filmer's mind.

All through that trying afternoon Banghurst behaved as he held a man should behave in the presence of hopeless disaster, and his guests for the most part succeeded in not insisting upon the fact—though to conceal their perception of it altogether was impossible—that Banghurst had been pretty elaborately and completely swindled by the deceased. The public in the enclosure, Hicks told me, dispersed “like a party that has been ducking a welsher,” and there wasn’t a soul in the train to London, it seems, who hadn’t known all along that flying was a quite impossible thing for man. “But he might have tried it,” said many, “after carrying the thing so far.”

In the evening, when he was comparatively alone, Banghurst broke down and went on like a man of clay. I have been told he wept, which must have made an imposing scene, and he certainly said Filmer had ruined his life, and offered and sold the whole apparatus to MacAndrew for half-a-crown. “I’ve been thinking—” said MacAndrew at the conclusion of the bargain, and stopped.

The next morning the name of Filmer was, for the first time, less conspicuous in the *New Paper* than in any other daily paper in the world. The rest of the world’s instructors, with varying emphasis, according to their dignity and the degree of competition between themselves and the *New Paper*, proclaimed the “Entire Failure of the New Flying Machine,” and “Suicide of the Impostor.” But in the district of North Surrey the reception of the news was tempered by a perception of unusual aerial phenomena.

Overnight Wilkinson and MacAndrew had fallen into violent argument on the exact motives of their principal’s rash act.

“The man was certainly a poor, cowardly body, but so far as his science went he was *no* impostor,” said MacAndrew, “and I’m prepared to give that proposition a very practical demonstration, Mr. Wilkinson, so soon

as we've got the place a little more to ourselves. For I've no faith in all this publicity for experimental trials."

And to that end, while all the world was reading of the certain failure of the new flying machine, MacAndrew was soaring and curvetting with great amplitude and dignity over the Epsom and Wimbledon divisions; and Banghurst, restored once more to hope and energy, and regardless of public security and the Board of Trade, was pursuing his gyrations and trying to attract his attention, on a motor car and in his pyjamas—he had caught sight of the ascent when pulling up the blind of his bedroom window—equipped, among other things, with a film camera that was subsequently discovered to be jammed.

And Filmer was lying on the billiard table in the green pavilion with a sheet about his body.

STORY THE SECOND

The Magic Shop

I HAD seen the Magic Shop from afar several times; I had passed it once or twice, a shop window of alluring little objects, magic balls, magic hens, wonderful cones, ventriloquist dolls, the material of the basket trick, packs of cards that *looked* all right, and all that sort of thing, but never had I thought of going in until one day, almost without warning, Gip hauled me by my finger right up to the window, and so conducted himself that there was nothing for it but to take him in. I had not thought the place was there, to tell the truth—a modest-sized frontage in Regent Street, between the picture shop and the place where the chicks run about just out of patent incubators—but there it was sure enough. I had fancied it was down nearer the Circus, or round the corner in Oxford Street, or even in Holborn; always over the way and a little inaccessible it had been, with something of the mirage in its position; but
